> Military Affiliate Radio System.
```

Such complete ignorance of MARS, yet somehow, he claims that he was the
Assistant NCOIC of a NMC MARS Station on Okinawa. Simply unbeleivable.

> Weeks went by without his

Accusations and insults. Whichever grad student locks on to him first
is one lucky SOB. All the work is done.

Selective amnesia...

With the advent of the No-Code Technician license, memorization became
a bad, bad thing.

> >Ummm? There's no Morse Code test anymore?

Most issues of QST have a minimum of at least one walk down memory
lane, usually with a key or keyer in one hand.

I think everyone has some of that to one degree or another. It's
unhealthy to allow that fear to paralyze you.

There will be new challenges before us tomorrow, but we won't know
about them. We will still be arguing if a morse code exam is
necessary.

My dishonest, transparent tactics...

Odd, saying what you mean and meaning what you say have become
dishonest.

I'm surprised that Klein allows any feedback in his oscillator
circuits.

Huh? Lets let the FCC tell us that it is impractical to have everyone
take mode exams. Or lets let the council of VECs tul us the same
thing.

If the league pushes the morse testing issue too hard, it will become
obvious to the 25% that are members.

1957. The Russians. Sputnik. CW beacon signal on 20M.

And I wasn't born yet.

But the technilogy was worthwhile and moved forward - without morse
code.

> The AN/PRC-8 backpack VHF transceivers (one of which I wore

Hams could save more lives by supporting a blood drive than than standing by waiting for that emergency to use morse code.
I hear about hams supporting public service, my daughter DID 75 hrs of public service last year as a ten year old Girl Scout. I learned CW even got up to 20 wpm but I dont think it should be any more of a requirement than any other mode of operation. There is a lot of hams who may not be able to save anyones lives but they could save their own by turning off the radio for an hour and taking a walk

Lets try a fresh approach.

Is anyone interested in recording weak signals emitting from remote
areas such as -

LOCATION: N44.02986 W116.03125 (NAD83)
FREQ: 218.000 - 218.999 MHz

At the same time as voice from the same general area -
FREQ: 34.000 - 34.999 MHz
FREQ: 159.000 - 159.999 MHz

Just wondering...

Do you really think what you post on a newsgroup is going to make ANY
difference in the real world...

Just because you bitch and moan on here, isnt going to make them revise
the licensing rules..

Get over it and move on...

Because Ham radio is dying. If you make it easier, you can attract more losers who may have joined earlier. Shortwave and Ham radio is dead. If you ask the man on the street what AM or FM is? They can answer you ,it"s what the hear on their car radio. The difference is the buttons on the radio. If you ask them what shortwave is? They would not have a fucking clue. It's DEAD. Get a life.

Maybe if you ask the average lame clueless bastard in the US. Shortwave and
amateur radio are alive and well and flourishing in other parts of the
world. Indeed, in many countries SW is still the system of choice to cover a
wide area.
```

It gets worse. Go to the QRZ bio page for K4YZ and use his
link to his AOL Home Page. There he claims not only an
Assistant "CHOP" (presumably CHief OPerator) but as THE
CHOP of another MARS station! He'd never mentioned being
at that 2nd MARS station in here.

>> Weeks went by without his

Yeah, but look at the MASSIVE outpouring of his claims, insults,
and generally vague, undetailed personal history of his. Whoever
takes it on will probably need a dozen file cabinets to store all

the printouts! :-)

well there Is Robeson and Wismen Heil is better than them but.. How
many example does one need?

right now the sample rate isn't very good of Extras that are not
members of NCI

given your non disclosed call status you certainly don't count

Hi,

I was looking for scanner frequencies in my home area and found a site were you can get scanner frequencies for anywhere in the country (United States). I did have to pay a small fee, but it was well worth it. I got hundreds of frequencies from everything imagiable.

There site states they have Frequencies for business, police, sheriff, air force, airports, ambulance, army, civil defense, constables, disaster services, firefighters, forests, harbors, highway partrol, hospitals, house authority, lifeguards, marines, national parks, navy, paramedics, police, resue, school buses, sheriff, transit systems, troopers, aircraft, alarm companies, amusement parks, casinos, collges, conventions, country clubs, farm cooperatives, hotels, mail security, movie crews, newpapers, private investigators, public utilites, race crews, railroads, resorts, ski areas, sports events, stadiums, state fairs, taxis, towing.

I got alot of those with my order.

They even sell police scanners if you haven't already picked up one by now.

IOW, you're not really a serious scanner enthusiast. Maybe if someone
sent you the key to Fort Knox you could afford to rent enough clues to
be clueless.

>You want to slam all Extras because of one lid?

Tsk, tsk, tsk, anony-mousie "Jawod," that LID is doing the
"slamming," not I. :-)

Why are YOU so upset, "Jawod?" You don't exist. You are
a mere figment of your own imagination. The FCC doesn't
license figments...

>Perhaps that same psych
>grad student has some prime real estate closer to (your) home?

Which home? The one in California or the one in Washington
(state)? :-)

As far as the southern home is concerned, its address has
been printed with every article I had published in HAM
RADIO magazine. It's still the same address.

No problem on "knowing psych" people. Graduates...of USC,
(University of California) of UI (University of Illinois),
of University of Wisconsin at Madison. "Students?" Not
greatly acquainted with any, only their instructors. My
wife has two Masters Degrees, one of which required a
thorough education in mental health...and she was licensed
in two states for private practice.

"Jawod," what you just attempted to do was INTIMIDATE
through suggestion. Old, old BLUFF. Didn't work, of
course, but you just had to try the bully game, didn't
you? :-)

That bluff-intimidation ploy has been used for years and
years on BBSs and Internet...almost always by those too
cowardly to reveal their true identity. [few of us would
be "scared" if we found out how you REALLY are...] Try
not to be such a blatant bullshitter in the future, OK?

Beep, beep and bye-eeee...

ARRL views itself as "representative" of the ARS. Unfortunately,
the 'ARS' stands for Amateur Radiotelegraphy Society.

Yes and no. When it comes to Status-Rank-Privilege the fear
of LOSS of those seems to take on a life of its own. They
are SOMEBODIES at present, complete with federally-authorized
permission and certificates (suitable for framing) to "prove"
that. Take away the status, the rank, and perhaps privileges
and they are (in their own perception) "lesser beings." That
seems to work with the normal prime survival rule in humans.

>Huh? Lets let the FCC tell us that it is impractical to have everyone
>take mode exams. Or lets let the council of VECs tul us the same
>thing.

Klein, armed only with an air of self-importance and inflated
claims of experience, is shooting from the lip.

IF and only IF such a "practical test" were imposed, the time
of testing EACH license applicant would increase dramatically.

VEs would have to spend at least a day's worth of time on each
applicant. I think VEs would object to such enforced labor in
a Volunteer task.

As with other proponents of a "practical test," Klein hasn't
explained WHO will maintain the equipment necessary for such
"practical tests" nor make up the much-more-complicated test
tasks and grading. Who will pay for the equipment that would
cover "everything" as to modes and operations? The FCC? The
VECs? Who will pay the VEs for their (essentially) "jobs"?

Klein assigns an importance and ability of AMATEUR activities
in radio far higher than professional ones. This is wrong,
but it serves his and other pro-coders self-image of being
"better" because they passed tests lobbied-for by those of
the same mindset.

>If the league pushes the morse testing issue too hard, it will become
>obvious to the 25% that are members.

I don't think so. The Amateur Radiotelegraphy Society is very
firmly SET in their ideas of keeping the "heritage" and
"tradition" of being a living museum of archaic radio. Those
firm believers and worshippers at the Church of St. Hiram are
disciples and they haven't had their last supper yet.

>
>Actuarial tables abound to deal with that kind of thinking.

That's a draconian sort of realism...but, unfortunately true.

Believers can be extremely stubborn. "The only way you'll stop
morse code is to pry my code key from my cold, dead fingers"
isn't an idle threat. Morsemen as SOMEBODIES and they will
hold that banner high even as they crumble.

>Yep. Testing must become more "legitimate" for hobbyists than for
>professionals.

Self-inflation of importance, meaningless in reality.

>> >The exam can be anything your VEC wants it to be. We learned this when

>QP revisions, guys like Klein are silent; absent.

That shows they are only whining, not thinking. In order to
preserve their self-image of importance they have to continue
whining on how they are so self-important. If they REALLY
CARED about their sacred amateurism they would get busy and
work at preserving things. Perhaps mumifying instead of
preservation...

>> What all that concentration on the "written tests" is about is

>
>Old and tired.

It is, but they are self-important because of a singular skill
test that makes them "better" than others..."better" in ways
not even remotely connected to that singular skill test.

So many people need to pump themselves up here. Truly amazing.

I have no interest in your wife's degrees, your home(s), your friends or anything else. Nor was any "bluff" intended.

My post was in response to the quote above. If that wasn't you, my apologies. It was a simple statement.

Whew. Sometimes accessing this group is like stepping in dogshit.

At the Anderscum residence, perhaps.

For the nearly 700,000 of us with licenses, it's the Amateur Radio
Service.

Note: Leonard H. Anderson is not an FCC licensee in that service.

> >I think everyone has some of that to one degree or another. It's

You would know, Lennie...

It's YOU that perceives that loss...For by taking the same test
mere mortals do, you "surrender" your "I Was An Electronics Engineer"
brags.

Snip of usual Anti-Amateur Radio rhetoric.

> >Odd, saying what you mean and meaning what you say have become
> >dishonest.
>

Thankfully OUR "last supper" will come long, LONG after yours,
Lennie...

> >Actuarial tables abound to deal with that kind of thinking.
>
> That's a draconian sort of realism...but, unfortunately true.

And as I was saying...Let's hope YOUR tables are into small
numbers.

MORE SNIPPAGE

> >Don't know if you've heard yet, but the ARRL and robesin announced that
> >MARS and TSA have an agreement for armageddon communications.
>
> Heh heh, I wouldn't doubt it...

"Armageddon"...?!?!

No one announced "armageddon" in any release that I am aware of.

Why did you?

Yet more evidence of why it's better to have Lennie "Can't Pass An
Exam" Anderson on the outside looking in.

Steve, K4YZ

I know you're right.

Mark butts into treads that aren't even about him with his 'cease and desist' and all his other unintelligible mis-spelled crap. Then when he gets flamed back or called a tard over it, he thinks it's a personal attack. Mark just needs to learn to keep quiet and let the hams talk radio.

I'm trying to help him by reminding him to not butt into threads and to ignore attacks so those of us that care about ham radio can get back to discussing the radio issues that will protect and help preserve the service.

Mark's posts make it tough to discuss radio issues because everyone is to busy laughing at him they forget the issue. He has even got the AUK goof-balls teasing him now.

Maybe that's Marks plan. To disrupt the radio groups so we Can't discuss issues needed to save ham radio.

He did say he wanted to be the first no-code Extra.

Usenet radio groups were a lot nicer before ham radio got dumbed down. Now the ham radio groups have a CB feel to them.

Some old time ham in the area needs to step in and show the scouts how ham radio and CW can save lives and help communities in emergencies.

Nickle Generals & Extra's have a hard time promoting amateur radio. All they want to do is promote dumbing it down more. It's no wonder the scouts aren't interested.

ROFLMAO!

.... And you've made me think of possibly joining CAP.

Testimonials like yours will bring a smile to every Real hams face. :-)

Just learn the code to 22 wpm. That would be a nice edge if you still had
to take a 20 wpm CW test. But if you can only get your speed up to 16 or
17 words per minute, upgrade anyway. We need good people like you on the
ham bands and on usenet. LOL

yes I wish to may well not make it but likely in the first big group
of them

nothing wrong with having goals esp when those gaols in the ARS
revolve around saving it from the death you want to inflict on it

3522. Duke University (Durham, NC, USA) trunked system change?

Newsgroup: rec.radio.scanner
Date: 2006-08-22 00:37:55 UTC
From: ac4rd@yahoo.com
Message-ID: <1156207075.193279.36320@m73g2000cwd.googlegroups.com>
Source record: 7152

Does anybody know what is different about the
Duke University (Durham, NC) trunking radio system?

For several years I've kept a scanner on my desk,
set to pick up 123.050, the standard helipad frequency,
and talkgroup "496" on Duke's trunked system, which is
.. or WAS .. the air helicopter channel. No big deal,
but I can see all but the last 100 yards of their
approaches from my window, and having the scanner on
lets me know when to look up and see an approach or
departure.

Until today, that is--this Monday morning, 8/21, the
Duke trunked traffic is still coming in--but the IDs
have changed. Instead of "496" and "1360" as talkgroup
IDs, I'm seeing 0001-7 and 0000-10 and numbers like
that. And I can no longer hear just the helicopter
group--I'm getting EVERYTHING, requests for clean
linen in this room, shuttle vans, etc. I have been
too busy to do much research but it seems like more
than one service/area/whatever may be using the same
(strange new) numbers. I can program the Pro-94A to
hear just "496" in the old system--but this new system,
whatever it is, is still a mystery to me.

Is this connected with the "rebanding" I keep hearing
about? Does anyone have an explanation of what has
changed that is simple enough for even me to understand?

TIA!

When are you leaving the group to go do that, "Slow?"

Oh, and while you're at it, why don't you inform the group
the date when amateur radio morse code saved ANYONE's life?
Betcha can't do it...

On 7 July 2006 the FCC released its Independent Panel report
on the worst natural disaster to hit the USA, Hurricane
Katrina. You can find it in the Federal Register of that
date. In there you can find an objective report on how much
radio amateurs helped their communities.

BTW, Comments on that Report are due on or before 21 August
2006...today. Have you sent in your Comment, "Slow?" No?

>Nickle Generals & Extra's have a hard time promoting amateur radio. All
>they want to do is promote dumbing it down more.

Tsk, if anyone was doing "dumbing it down more," they'd have
to outdo your own retrograde, freeze-it-in-YOUR-youth ham
radio, "Slow." Feel proud. You are practically a one-ham
show on dumbing down the service...

>It's no wonder the scouts aren't interested.

Tsk, you should have recited your own tale of saving the
Titanic...when you were asleep on the US California...

It's "minority rule" when ARRL lobbies for preservation of
morse code test for any amateur radio license class. The
ARRL membership is slightly less than a quarter of all US
amateur radio licensees.

>
>the last thing we want to sugest that robeson might wear is something
>invisible now that image IS a sexauly distrubing one

Ahem...my reference was the old fairy tale, "The Emperor's New
Clothes." :-)

That's the one where a full-of-himself ruler ordered some new
clothes and the tailor buttered him up (while not sewing any
new clothes) so much that the Emperor bought into this pandering
to his ego and appeared in public with his "new clothes" (he was
naked). Needless to say, the public laughed and laughed at this

ridiculous spectacle. :-)

Robeson has been all full of himself in here about his alleged "USMC service" yet he has presented zero-point-zero evidence from anyone else (or any legitimate agency) that he ever served on active USMC duty for any of his claimed "18 years."

Even though he NOW thinks of himself AS the amateur radio service personified (anything against him is somehow against ALL radio amateurs), he is still parodying the "Emperor."

Isnt that the main point tho.... they have no power to do anything...

They are just sad ppl with nothing better to do. Next they will be
saying that
you should have to pay a monthly fee to use the airwaves...

Maybe have a subscription fee, that would stop most of the scum (yeh
right)

well a GMRS like license would surely do better asa filter than the
code test look at the code tested ham we have on the air now

What part of the GMRS license would be a better filter?

The 5 year duration between renewals, the $75/£40 charge or just the
general way of applying for it?

Im not saying i disagree, just wondering what you meant..

having to pay to use the ARS freqs might be more of a deterant to those
with bad attiudes than a code test

not to say it would be a good filter but fee for license with the
license fee used for enforcement here in the state the license is free
(the tests cost something) and the FCC is always complaining it laks
any funding to go after ham violators I suspect you are a brit and so
this might escape you I should have been clearer

nice to see someone serious paying attention here I had assume the
flamers and trolls had driven them off

3536. Discriminator output on icom ic-r20?

It sounds more like you hitting the wrong button on your scanner.
You're seeing the talkgroups in a different format, and you're hearing
all talkgroups, not just the ones you programmed in. Not knowing
which scanner you have, there's no way to tell what to do to put it
back.

In these days of mobile telephones, etc., morse code just gets in the
way of emergencies.

But there's nothing to prevent people who appreciate and love the
language of Morse, the way it sings, its universality, its beauty,
from continuing to use it way into the future.

It is the beauty of Morse, in plain English, never mind the
abbreviations, which boy scouts and others who show an interest should
be taught to appreciate.

It was a CQD actually....
but the point is,
the ham immediately alerted the Frankfurt, Olympic, Carpathia, et al and
told them to go save lives! Being simple Marconists however; they all said
'no' so the ham
grabbed his portable radio trunk, strapped a J-38 to his leg, jumped into
his skiff and madly paddled 46 hours straight out to the stricken ship, all
the while tapping
out rescue coordination efforts with his elbow, and.... wait... I forget,
where does it go from there?

I like watching gleaming reciprocating stationary steam engines with 8 feet diameter flywheels. They turn me on too. The government doesn't interfere. But there's not many about these days. ;o(

Turbines leave me cold!

The Titanic knew their coordinates.... didn't slow the influx of H20....
The responding ships had radios too... didn't turn their props any
faster....

Answer to the question.... there was no system then.
CW can punch through if there is a human on the other end, where GPS/packet
says 'no signal'....
GPS is faster, where CW takes longer....
so one is obsolete, the other inferior.

Wow.... so you could almost say the reason there was such a disaster
[notwithstanding the time period and simple circumstance] is that all these
radio operators [and companies] were acting like a bunch of egotistical
morons, each thinking their way to be better, and that most
vessels communications, wireless ops and policies were almost.....
amateur..... in nature?

LOL...

And I say I agree with the problem that mentioned for the cw being needed
and life saving station for the pc with no code.
It'll never work and if it does it will only be working a pc and if that is
not the person then it is not the same
so you can say it didn't work anyway because it wasn't a person that needed
it.
So there.

Well there ya have it folks.... 50wpm saves lives. So how does it work?
Turn up the speaker really loud and place it [face down] on the person's
chest, while
an op in South America tapped out universally accepted words that would
mimic an atrioventricular rhythm?

Wrong theatre? OK...

Maybe if a person is trapped on a sinking ship in the Indian Ocean you, in
Siberia, could tap out a message to someone in Madagascar [who happened to
be awake at an odd hour] and that person also owned a large SAR chopper,
they could jump in it, saving the time of relaying to anyone else, and go
pluck them from certain death?

OH, or better yet... if your neighbor is also a ham.... and your wife fell
over with an AMI, you could call your neighbor, give him a freq, then the
two of you
get set up and running, then you can send a 50wpm message asking your
neighbor to call an ambulance? BTW, if the phones are down, you ask him to
get in his
car and drive down to the local EMS agency, and bring them to you. Life
saved!
I'm impressed.

Not true.... commercial stations ID with CW all the time. It's great for
zero-priority use.

Ha... yeah, only a ham radio operator would use a non-digital camera.....
and then it would have to be a daguerreotype.

Won't work.... memorizing is learning. You know where you live because you memorized it. You know what a diode is because you read it somewhere. Reading a book or taking a class on radio would require you retain [memorize] what you are told or read.

The information on radio should be kept secret, and the real test would be this:
Here's a radio. Take it with you. Come back in 30 days and explain how it works.

Then you get your owner's license, and can buy a radio.

Next test is to listen on-air to the CW [as there is no reason to use phone, if you already speak a language.] and figure out the code without any text or charts.

Then you get your operator's license.

When you can do that, then you can act like you've accomplished something.

>The Titanic knew their coordinates.... didn't slow the influx of H20....
>The responding ships had radios too... didn't turn their props any
>faster....

The year was 1912...NINETY-FOUR YEARS AGO.

>Answer to the question.... there was no system then.

The predecessor organization for SOLAS had not yet made 500 KHz
the international distress and safety frequency. "SOLAS" is an
acronym for Safety Of Life At Sea.

>CW can punch through if there is a human on the other end, where GPS/packet
>says 'no signal'....
>GPS is faster, where CW takes longer....
>so one is obsolete, the other inferior.

The International Maritime Community settled the 'morse issue.'
They DROPPED it in favor of GMDSS (Global Marine Distress and
Safety System), a semi-automated system which can be operated
by anyone of the bridge crew on a ship (it needs little
instruction on use). GMDSS messages are automatically routed
to ground stations (note plural) via satellite relay. Those
ground stations can coordinate rescue missions.

A shipboard GMDS station doesn't HAVE to have a GPS receiver
to feed it position data but all those which have one have
no complaint about this alleged "loss of signal." Position
data can be entered manually to a GMDS station. The bridge
crew will have a running record of the ship's position in
either event.

The United States Coast Guard has DROPPED continuous
monitoring of the 500 KHz distress frequency some years
ago. Several other countries have done so.

A following question is WHO will you believe on the efficacy
of communications? The entire international maritime
community or a bunch of myth-happy amateur morsemen?

In a sentient, intelligent mind, ANY form of communications
is good for use in matters involving life and death. The
FCC thinks (rightly) so and says as much in Part 1 of Title
47 C.F.R. [Part 97 is not the entirety of regulations on

amateur radio in the USA]

In a preceding message set:

>"Cecil Moore" <myc...@hotmail.com> wrote in message
>> Dave wrote:
>>> David G. Nagel wrote:
>
>>>> A ham operator intercepted the SOS from the RMS Titanic.
>
>>> Yep!! It happened once!

It happened NINETY-FOUR YEARS AGO.

>> If CW had not existed at the time, how would things have
>> turned out differently? If the present GPS-based system
>> had existed at the time, how would things have turned out?

I have to fault Cecil's erudite and intelligent mindset
on that...although his motor looks good in his picture. :-)

One CANNOT base any intelligent argument about ALTERNATE
universes of different times and places. It hasn't
happened in our present time-space continuum.

In 1912 "radio" was in its infancy, having been first shown
and demonstrated as a communications medium just 16 years
prior. There were extremely few ships which had vacuum
tubes as active devices to aid those first "radios." The
tube was only 6 years old, the triode invented in 1906.

To argue about "GPS" (which is not an integral part of
GMDSS but can be) versus morse code is ludicrous. GPS
relies on a time-frequency standard within each of the
24 GPS satellites which is comparable to the best time-
frequency source at NIST. [the quartz crystal
oscillator wasn't yet invented in 1912] Each satellite
needs solid-state circuitry to make it function within
a relatively small package. [the best "solid-state"
device of 1912 was a galena crystal detector with its
famous "cat's whisker"] The whole GPSS needed rocketry
advanced enough to put all the satellites into orbit.
[rocketry wasn't perfected for that purpose until after
WW2] Those rockets needed launch guidance aided by
radar systems. [radar, or rather a primitive system of
it, wasn't tried until 1932 in a harbor area of France]

However, "morse code" was used in the landline Morse-Vail
Telegraph System working before the American Civil War
and simple enough to turn a spark transmitter on and off
as on the Titanic.

>> Which system is presently inferior and virtually obsolete?

On-off keyed CW.

Except in the mindset of the ARRL. The IARU knows better.

>with the added though that this is thebest the procoder can muster

Robesin is merely a product of the "incentive" licensing
system where all those who hunger for being a "somebody"
can get a Title - Rank - Privilege through a singular skill.

I didn't make that system, neither did you, neither did
anyone in these four forums. The FCC took a big chunk out
of it (license classes and morsemanship skill) with the
Restructuring of 2000 and that pissed off the Title-Rank-
Status seekers. Devout morsemen are angry and venting steam
because their self-esteem has fallen.

>> Robeson has been all full of himself in here about his alleged
>> "USMC service" yet he has presented zero-point-zero evidence
>> from anyone else (or any legitimate agency) that he ever
>> served on active USMC duty for any of his claimed "18 years."

Simply amazing. EIGHTEEN years alleged on active duty and
he can't supply a single photo or document to support his
claim? In November of this year I can truthfully say I've
been in the southern California aerospace business 50 years.
I have all sorts of documentation and photos on that which
I may fully digitize some day (some are already digitized).
Some time ago I posted my resume in here...which only made
Robesin ballistic then since he has NO comparable
experience in industry and cannot prove any radio experience
other than amateur and alleged "chief operator" status at
some small MARS station long ago. [that was before his
less-than-a-half-year as a purchasing agent at a small
set top box maker]

In another recent post, Robesin keeps referring to a "CV."
That's an acronym for the Latin 'curriculum vitae,' a list
of life experiences (education, work experience). In the
electronics industry, indeed in MOST industries, those
applying for jobs don't present a curriculum vitae, just a
RESUME of education-work experience. Some academics may
use "CV" but Personnel departments still look over resumes.

Just one more little gaffe on Robesin's part, trying to
LOOK experienced when he is NOT.

>> Even though he NOW thinks of himself AS the amateur radio
>> service personified (anything against him is somehow against
>> ALL radio amateurs), he is still parodying the "Emperor."

Another sign of his megalomania, purporting to "represent
all" and, by extension, anyone against Him is "against all
radio amateurs." Robesin desperately needs SOMETHING to
hold up his self-esteem and he uses amateur radio for that
selfish purpose. It is like his infamous snot-on-the-
moustache CAP flight suit picture, big on rank, title, and
with implications of status. CAP is NOT about amateur
radio but Robesin keeps on harping about it as if it
"proved" something about his amateur radio abilities. He
does the same with his "ER nurse qualifications" but those
have absolutely nothing to do with radio, amateur or
professional.

But, challenge Robesin or call him in error and one will be
inundated with personal insults. Robeson MUST be right and
he MUST rule. Civil comportment be damned with Robeson in
newsgroups. Those newsgroups were (in his mind) created to
showcase Him?

LenAnderson@ieee.org tried the same old tired rhetoric:

Huge snip of same stuff Lennie's trashed the NG with for years.....

> But, challenge Robesin or call him in error and one will be
> inundated with personal insults. Robeson MUST be right and
> he MUST rule. Civil comportment be damned with Robeson in
> newsgroups. Those newsgroups were (in his mind) created to
> showcase Him?

No, Lennie...All YOU had to do was start in with the Nazi terms,
elitist, etc etc etc.

Google archives refer.

I'd say you had a pretty good insight to yourself....

Hmmmmmm...Lessee......

> But, challenge (Anderson) or call him in error and one will be
> inundated with personal insults. (Anderson) MUST be right and
> he MUST rule. Civil comportment be damned with (Anderson) in
> newsgroups. Those newsgroups were (in his mind) created to
> showcase Him?

Yep.

Perfect fit.

Steve, K4YZ

1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

5. No more "multiple guess" code test. One minute solid copy with
lots of numbers, punctuation, and intentional misspellings

6. No more VE sessions. Re-establish testing at FCC Field offices,
and train test administrators in the mold of Jules Finkelman.

7. No more pass the theory one day, the code another day. If you
expect to be a ham, you should know both the same day.

8. No more transceivers. Separate receivers and transmitters,
preferably with tubes, that you have to tune separately. For first
year of license, crystal transmit frequency control only.

9. Fill in the World Trade Center hole, re-establish the old grid of
streets, and re-establish radio row on Courtlandt Street.

This just in from The ARRL Letter, Vol. 25, No. 33, August 18, 2006

"ARRL First Vice President Kay Craigie, N3KN, represented the League at
the
Global Amateur Radio Emergency Communications Conference 2006."

"Craigie stressed that Amateur Radio needs to avoid "being dazzled by
our
own press clippings into thinking that we are the big dog in emergency
telecommunications.""

She refers to robesin-like attitudes within the ARS.

didit!

Hi Guys,

First, I'd like to recommend that you become a member of the Pro95 Yahoo group.

Secondly, I'd also like to recommend that you use the wonderful F-R-E-E software for the Pro 95 by logging onto Don Starr's website: http://www.starrsoft.com/

It looks very complex, if you've never used it before. I was a newbie too at one time. I made some mistakes, but I know just how much I missed by not using Don's software.

If you get lost or stuck, we are all there at the Yahoo group to help you. We were newbies once too...

Alain

The council of VECs has already eliminated the multiple choice test. Now
it's fill in the blank or get solid copy.

Did someone drop you on your head at birth? The reason 50wpm can save
lives is probably a bit complex for you to get both your functioning
neurons around, but believe me, having done CW for a living for some
decades I do know that it can save lives. And if you're faster than the
average bear at it, you can tell someone on the scene things they need to
know all that much faster.

So apparently YOUR answer to this question is that you couldn't send your
name if your own life depended on it.

Believe me, I get it. I don't think CW ought to be mandatory and it
isn't where I live. I do think people who intend to use it should learn
how to use it properly, though. For CW to be effective, both operators
must be competent. IF they are, they can often transcend barriers of
language that only digital modes can get over. In my own case, the fact
that I could read CW and read written Spanish a bit once enabled me to

render aid to a burning fishing boat. (There were other more routine examples of where the language barrier was crossed by CW--many messages I copied were not in English at all, but were readable by their end recipients).

Yet as "chief operator" or ANCOIC of NMC MARS on Okinawa, he remains
woefully ignorant of MARS. I just don't get it.

> In another recent post, Robesin keeps referring to a "CV."
> That's an acronym for the Latin 'curriculum vitae,' a list

Maybe he meant "constant velocity" as in "CV joints" because he's
always "spun up" about one thing or another.

In the

Robesin an academic? Not in this lifetime.

It's just his inappropriate use of what to him are important sounding
words and acronyms.

Yep, im british.

I can see your point about the FCC complaints, lack of funding is the
usual reason for them not to bother to go after ham violators. If they
charged users then they would be able to use that money to go after the

retards who clog todays airwaves...

And the flamers/trolls havent driven us all off, we just go into hiding
until we see something of interest, and just ignore the rest...

indeed but you can't discuss any changes as I suspect you have ntoiced

and for that matter I have never seen why we have to have all of us
geting our license by the same path

indeed I have always liked an idea with some folks talking a rule and
safety test (and being confined to built equipment) and pay a fee while
others would takerigourous test and no fees

So basically ur saying that you should be able to either

1. Pay for your license and Take a beginner test (to prove your
competent)
or
2. Take a Intermediate Test and get free license after passing

If this is what you mean, then i can see your logic and i would fully
support a system like this...

Only problem is that just like Slow Code and the other trolls who try
to change the Ham world, we wouldnt be able to do anything either, its
down to the corporations, not us little people...

well maybe I am naive but if Ham could get it together to support
something different that was not hard to run (from the FCC's point of
view) I suspect we would get it

Oh. My. God. ! ! !

Tsk, just because NBC, CBS, ABC, CNN, FOX, ESPN, and PBS haven't
covered the tremendously fantastic wonderfullest huge contribution
to saving lives and property via ham radio? Gosh, there are all
sorts of clippings from obscure weekly and biweekly newspapers
dutifully cut-and-pasted into messages here from Robesin & Co.

Maybe I'll have to write the Department of Defense and say that
"Major" Robesin said that radio amateurs run MARS! They should
fortwith cease and desist publishing DoD Directives on thinking
that they started it and keep running it!

Maybe I missed the "news" on the Home and Garden Channel...I don't
watch that much...

Right and all the other radio services are switching to morse
code for all emergency communications a la ham radio...the sky
has truly fallen!

>didit!

Dahdah comrade. :-)

Give up on Robesin, Mark. He MUST remain "right" and He
"must" rule. He isn't interested in civility. Once an
"enemy" of his, always an enemy in his mind. Sick way to
be but he is that way, repeatedly. He just proved it in
the message you replied to.

He is setting the example for all hams. Not going to help
the amateur ranks in getting more hams but that is not,
apparently, his point. Robesin needs to come out on TOP in
his own mind, be chieftan, be the warlord.

He also wants rec.radio.amateur. policy all his own to do with
as he sees fit. [probably to have his daily fits in...]

Ech...

> but titles like that are Robeson stock in trade my content in his posts
> just ranting on and on about epople instead of Issues

Absolutely true, Mark. He tries to belittle his "enemies" so that
He looks good. Problem is, it is working in reverse and he is only

belittling himself.

Why? Is Amateur Radio a memory test? Make it a lifetime license and
reduce the FCC's workload.

> 2: The passing score for written exams needs to be raised to 85%.

Why not 100%? Are you saying it's ok to screw up 15% of your operating?

> 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Why should anyone be tested for code proficiency if they don't plan to
use it? I can see testing for basic knowledge (dit dah = A), but why
any particular speed? Should people be tested for speed talking before
using voice modes?

> 4: Make the no-code license one year non-renewable.

All licenses should be no-code. Does the FCC test for speaking ability?

I don't think you have thought this through very well. Go take a nap
and come back after some extended cogitating.

Bill, W6WRT

I have been into Shortwave and Police communications since the days of putting crystals into my 8 channel regency scanner from Montgomery Wards.

I am 41, college educated, and technically savy. Today I am going to go and take my license to be a certified Technician no code ham. So far every test I have taken online I have achieved a passing score without doing any studying other that the knowledge I have accumulated over the past 30 years of being a shortwave, military comm, and police comm listener.

I hope that others in the hobby do not have the same attitude that you possess and are favorable to me being new to the hobby (I am a bit shy out the gate but warm up quickly).

The fact that the fcc has made this test so much more attainable is a good thing because it invites those (like myself) who decide to join this hobby as a result of the test being passable with a basic understanding of the radio spectrum and laws of using the spectrum for which you are licensed to use.

More people available to be a part of the hobby is a good thing. So why would you want to try to weed them out?? Almost sounds like you are being a bit of a radio snob.

Just my 2 pennies worth.

Possibly, because try as I might, I can't really remember much about that
day.... I had pyloric stenosis, if that counts?

> So apparently YOUR answer to this question is that you couldn't send your
> name if your own life depended on it.

Now that's true... I'd require a CW setup of some kind in order to send my
name; or anything else for that matter.
Or as previously pointed out, hack up a headphone jack and tippy tap the
wires together. Either way, I don't see my life depending on it at any time,
so I'll just let my CW skills continue to rust.
However; your argument does make me wonder how non-hams even have a chance
at life in this world... ??

OK.... so by your own words, CW still didn't save a life... CW mixed with
bad Spanish passed a message. So now we'll have to add a Spanish test.
Thanks a lot.

As for the language thing.... I can copy voice language and hand it off to
another native just as easy and they'll figure it out too.

No CW necessary.

BTW, I noticed you conveniently left out the specific year in which said burning boat was offshore with an obsolete CW outfit, and how your CW expertise put out a fire.... but I'm guessing we're talking many a year ago, so again, a moot point.
Actually,
The boat thing in general is really killing me... If these numb-nuts are offshore and not on the correct USCG freqs and/or unaware of how to properly tune their radios in an emergency, then it isn't CW saving lives, it's the grace of God that somebody happened to be on their freq at that time. But again, what boats are out there with a CW rig???? That's crazy, bubba. :-)

> http://kb9rqz.blogspot.com/

Not an exact date, though it's probably in the archives of the Canadian Coast Guard, my employer at the time. Hey, I worked at Halifax Coast Guard radio from 1977 until 1995, 18 years at the one station. We handled a number of SOS calls on CW and were able to save lives some of the time (not always. alas). But with trained operators on both ends of the signal path, CW was pretty much always an easier go than SSB. And SITOR was pretty much a joke. Half the ships couldn't get it going.

INMARSAT is what put CW out of business in the marine industry. And a nasty solar flare or two could put INMARSAT out of business. You pays your money and you takes your chances. I'm not sure that a ship equipped with a complex satellite radio with a lot of moving parts and a technician is all that much better off than a ship was when they were equipped with an MF-HF CW and SSB radio station and a radio operator who was also a trained technician. All is well until something breaks and the nearest part is 500 miles away over water.

CW was still in use for a some ship-to-shore work when I retired in 1995.

When I went to the high arctic in 1964 it was our main means of communication with the south. We eventually converted that to RTTY and SSB, but neither was really as effective as the CW that preceded.

Now, today, we have such things a PSK31 to do much of the grunt work. That will work as well as CW in most cases, I find.

My point is, my bad Spanish might not have recognized the word "fuego" if it was spoken fast among a lot of other words. But on CW it came across loud and clear.

> As for the language thing.... I can copy voice language and hand it
> off to another native just as easy and they'll figure it out too.

Except you'll be a lot slower because you'll need phonetic spellings for everything. Believe me, I know. I've done this. For a living for many years.

> BTW, I noticed you conveniently left out the specific year in which
> said burning boat was offshore with an obsolete CW outfit, and how

Not that long ago, really. Early 1990's if I remember.

> Actually,

This was on 500khz (and 484). CW was the mode of operation on those frequencies until well into the 90's. Cheap SSB radios were plentiful. So were some SITOR lashups. But what finally killed it was INMARSAT.

So now, instead of getting nailed by solar flares on HF, you get nailed by them on INMARSAT and have to wait 6 to 9 months for a new launch. Meanwhile you're limping along on SSB using a phonetic alphabet to send traffic at a SLOWER rate.

>bad Spanish passed a message. So now we'll have to add a Spanish test.
>Thanks a lot.

I think you missed the point. Even if you didn't know "ola" from
"adios", you can copy Spanish in CW and hand it to the recipient, who
can read it. Try that with a mic.

>As for the language thing.... I can copy voice language and hand it off to
>another native just as easy and they'll figure it out too.
>No CW necessary.

Really? You can write a spoken language you don't understand well
enough to be read by someone who understands it? Maybe. Maybe not.
In CW, you can.

It sounds like you want to be a ham so you will be welcome.

The point that some people are trying to make is that attracting people who
do not want to be hams is rather pointless. They'll be talked into getting
a license by some overzealous person telling them how easy it is and then
will end up not participating because they don't have an interest in it.

Don't forget thought that solar flares and especially the aurora they create
induce a phase shift in signals and that wipes out PSK31.

I do that firaly well as long as it is a a langauge fro gruop I know I
can take down serbian in crylllic even though I don't what they are
saying it is simply a skill For that matter I hear and resend Morse as
long as I don't try to decipher it
>
> >As for the language thing.... I can copy voice language and hand it off to

> In CW, you can.

YOU can and you then claim that you have that skill it is valid

your values in the ARS refuse to accept that notion different strokes
for different folks

If instead of CW testng we had a choice a various tests to take that
would stand muster the current value Morse well outside of it value
withut even realy testing its abilty to do a QSO were the test based
sending and receiveing where the receiveing could send bak pse senf all
after ... and before what then take a test to show that he was able to

comincate the test would have more vailiity but it doesn't the CW tests
do noy even show that the testee can use CW over the air

If you had to use CW to save someone's life, would that person die?

You would have a scanner if it weren't for hams. Ever tune 144-148 or
420-450? Good stuff Maynard.

> What versions of phonetic alphabets are there with
> only female names?...

Most of the time it's best to use the standard phonetics: alpha, bravo,
charlie, delta, echo, etc....

But in some situations, using an alternate phonetic set will make your
message much more clear & accurate, so it's better to use the alternate
phonetics when clearity and accuracy is paramount.

For example, using 'Anal Boy Ate Multiple Queers' for AB8MQ, is much more
clear and accurate.

Happy to Help

>were with all the layers of hamdom.

All of those "layers" hams are examples to the general public,
good or bad or indifferent. So?

"Self-esteem" is a nice-nice word for EGO tied in with self-
perception. Trying to represent themselves as "expert" radio
persons in this new millennium is a rather stupid idea of those
devout morsepersons when they want to force the FCC to keep the
code test.

Those who LIKE morse code should, and can, go on using it. That
is in no sense any validity for making it an amateur radio test
requirement for a license.

>woefully ignorant of MARS. I just don't get it.

It's easy to "get." He wasn't what he says he was. He hasn't
supplied a single bit of evidence to prove his claims.

>> In another recent post, Robesin keeps referring to a "CV."
>> That's an acronym for the Latin 'curriculum vitae,' a list
>> of life experiences (education, work experience).
>
>Maybe he meant "constant velocity" as in "CV joints" because he's
>always "spun up" about one thing or another.

He tries to "spin" his claims to be the truth. Still no
evidence presented.

Robesin used the wrong word/acronym for a RESUME' presented
as part of an interview for a job.

>Robesin an academic? Not in this lifetime.
>
>It's just his inappropriate use of what to him are important sounding
>words and acronyms.

Some of those he makes up as he goes along.

>The rec.radio newsgroups have showcased Robesin. He HAS earned his
>reputation. He's worked very hard for it.

He's hardly worked in radio.

> In CW, you can.

Spanish words are easy to write even if one doesn't
understand them. In general, unlike English, there
is usually only one possible way to pronounce and to
spell a Spanish word. You hear "a-di-os". You write
a-d-i-o-s. You don't need to know what it means.

Lessee. He's got a Marine uniform (he says). A Tennessee State Guard uniform (whatever that is), an ill-fitting Air Force CAP flight suit uniform, and a male nurses uniform. And he has lots of military medals that he never earned (according to him).

You know, whenever I saw folks in the CAP uniform at any Air Force Base, including Maxwell, they work the 4b or Class A. Never ever saw a CAP in a flight suit before robesin's well advertised home page.

Ever try taking dictation at 100wpm spoken speed in a foreign
language? I have. Even in one I understand, it's difficult. In one
I don't understand it's impossible. Maybe you're better than I am.

> In general, unlike English, there
>is usually only one possible way to pronounce and to

>a-d-i-o-s. You don't need to know what it means.

When it's spoken very quickly and in a panic, it's more like
"adhyose". Understandable, if weird looking, to a Spaniard. Try some
other languages, though - those you've never heard spoken before. See
how well you do. Then see how well you do in CW ... oh, you already
know that, don't you? -.-. is the same, whether it's hard, soft or
unpronounced. Whether you put a cedilla on it or not, a Spaniard will
understand it. So will a Turk, even though it sounds more like - -.-.
But would you write "Con" for something that sounds like Tchonn?

I can certainly write down Spanish spoken at my CW
speed of 13 wpm which is the whole point. If one speaks
faster, I may not be able to copy it. If one sends CW
to me faster than 13 wpm, for sure I cannot copy it even
in English.

In all my visits to USAF bases I've never seen any CAP
personnel there, let alone some in a poopy suit. I've seen
several civilians on USAF bases, employed by the USAF, wearing
flight suits and clearly identified as to being civilian.

Oh, oh...in the PC (Political Correctness) of morsedom,
the code test cannot possibly ever be a "barrier."

ALL "good hams" should WORK for their AMATEUR licenses!

Those that won't are worse than river-bottom slime...:-)

Trying to speak logically, the FCC grants amateur licenses
in the USA and even they proposed (via an NPRM) to eliminate
the amateur radio morse code test for a license. FCC is on
record of a couple decades ago that this singular manual
skill test does not tell them if a license applicant is
worthy of a federal license.

>that 1,000 yard stare.

That's also a symptom of anoxia...lack of oxygen used up in
his bragging of what he did that never was... :-)

Tsk, all that work he does in trying to bluff us. All he had to
do was present SOME sort of document proof or even a personal
snapshot taken while in that "hostile-action-filled" 18 year
"career" in the USMC. He hasn't done so after many years.

If he can't present a single item of 18 years of his life, it
is hard for the rest of us to believe anything he said.

>And probably at least as credible as the rest of the news they carry.

Weeklies and bi-weeklies serve their communities okay. It's
when their reporters get overly ambitious and start copying
copy from other sources when they get into trouble.

>> Maybe I'll have to write the Department of Defense and say that
>> "Major" Robesin said that radio amateurs run MARS!
>
>He did.

We KNOW Major Dud said that in here over and over and over and
over and over and over again, but did he really write DoD?

BWAAAAAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!

Ok.... and lose 99% of the available operators when another Katrina
hits..... We needed *ANYBODY* that had a radio and a license for almost a
month after the storm. My town took the direct hit from Katrina..... even
though we are 60 miles north of the gulf, I still had 110mph sustained winds
at my house.

Your objection was that I cannot write Spanish at 100 wpm.
I admit that but I know how to say "despacio" until they
slow down so I can write it down. Since I can copy CW
at 13 wpm, that seems to be a reasonable comparison.

Let's keep the CB'ers on CB.

1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

Tnx, 73

You'll lose some lazy ops, sure, but the operators that remain will be
better.

In all my visits to USAF bases I've never seen any CAP
personnel there, let alone some in a poopy suit. I've seen
several civilians on USAF bases, employed by the USAF, wearing
flight suits and clearly identified as to being civilian.

Oh, oh...in the PC (Political Correctness) of morsedom,
the code test cannot possibly ever be a "barrier."

ALL "good hams" should WORK for their AMATEUR licenses!

Those that won't are worse than river-bottom slime...:-)

Trying to speak logically, the FCC grants amateur licenses
in the USA and even they proposed (via an NPRM) to eliminate
the amateur radio morse code test for a license. FCC is on
record of a couple decades ago that this singular manual
skill test does not tell them if a license applicant is
worthy of a federal license.

>Oh, I don't know. After a hard day behind the microphone, he's got
>that 1,000 yard stare.

That's also a symptom of anoxia...lack of oxygen used up in
his bragging of what he did that never was... :-)

Tsk, all that work he does in trying to bluff us. All he had to
do was present SOME sort of document proof or even a personal
snapshot taken while in that "hostile-action-filled" 18 year
"career" in the USMC. He hasn't done so after many years.

If he can't present a single item of 18 years of his life, it
is hard for the rest of us to believe anything he said.

LenAnderson@ieee.org

Well, doggone it, Lennie. Next thing ya know he'll be posting over the
callsign of another Amateur.

Nope...ya just cain't believe guys like that, can you Len?

As I said in another post, try that in Turkish. Or Latvian. Or any
other language you don't know a single word of.

But in CW, it doesn't matter - you write the letters as they come,
whether you know what they mean or not. In the Navy, we had to read
what we had copied to know what it said - the CW came in your ear and
went out your fingers, you didn't pay attention to it. English? Who
knew, until you read it?

if you get a message in turkish in most of the USA you still have a
useless message since where are yo going to find some that read the
lang

There is supposed to be a form of self-afflicted asphyxia but to talk
of it wouldn't be polite.

Seven hostile actions, I'm told. I can't imagine being short-sheeted 7
times by members of my flight.

> Good riddance.

In the past, the company did very well, even though the products and service were costly they were of the highest quality. Once the founder, Mr. Morita, passed away, the company became very poorly managed -left to bean counters and lawyers who had no concept of the value of a tradition of quality products or service. They made sweeping changes they would not have dared to make while Morita-San was alive. Parts in machines that had previously been cast or machined became stamped. Machined brass or aluminum bosses holding mechanism guides and supports to a mechanism baseplate became molded-in nylon strips and thin sheets with little threaded and even -perish the though- press-fit bosses on them. Yes, press-fit metal into nylon. Service quality also became secondary to profit. That is, the service organization was no longer permitted to break even in order to provide high value service, and the profit-center model they implemented caused the quality of service to drop severely, even as they raised the hourly rate to $150 (broadcast) and cheaply hired inexperienced technicians right out of a 2-year course DeVry to work on broadcast video gear. People I would not let loose on a CD palyer. Their excuse was "hire from a diverse pool" but in reality that was not done. We called them 20-20's because they were 20 years old and made $20K/Yr

-and they really had no concept of the fundamental theory behind most of the equipment they worked on. I mean these guys could not tell you the difference between a balanced and unbalanced signal, or why it was important. Service center managers expected us 'old' guys to train them, but the immaturity, laziness, and impatience of such folk won out as time and time again the rework would come back. Customers would say that Sony service was becoming no better than Panasonic's, a huge insult previously, but it became close to the truth. The profit sharing plan dried up as the hungry new 'hollywood' branch of the company, a gigantic business error, sucked up money faster than a new york coke prostitue. They were paying Michael Jackson's salary for a while too. It was a mess, and the spiral to destruction was not slow, and is probably now irreversible. I left Sony when they decided to consolidate alll service to one location and they offered me the "opportunity" to move to Norcross GA (Atlanta) and work in a 24-hour sweatshop, er.. hot-seat repair center. In the current center, I was in charge of a 12x30 area with three 7' racks, a desk, computer, phone, and workbench, with maybe $250K worh of test gear, and that is where I did my repairs. I worked on high end NTSC and HDTV digital broadcast and production products. Nothing I worked on cost less than $5000 and most of it was in the 20K range. That was the level of responsibility. The new place would have me coming in to a seat still warm from someone's butt every morning, sharing a drawer full of possibly nasty hand tools and maybe some potato chip crumbs, in a short workbench with no desk, no racks and only a couple pieces of test gear, working on cheap VHS or 8mm video tape recorders with two other people, and no computer or phone, all assholes and elbows, butts to nuts with 300 other people in the huge room, the hillbilly boss staring down from his loft on the second floor, deciding which slave to beat. (we sent spies in ahead to check on this) That is what they did to the service department and it is why Sony service sucks now and why the products are not what they were. I could go on, but there's no point. I think that was the best thing that Sony ever did for us experienced people, shutting down the regional service centers. Really gave our carreers a boost when we changed Jobs. Sony on your resume used to mean something then. I wonder if it does now?

>I don't believe his bs.

Any rational, sane person can't believe his claims. Hopefully,
that is most of us reading some of the garbage going on in here
now.

I found it uproarious that Robeson tried to cover up his NOT naming a single military radio that was operational during his alleged 18-year "USMC career," claiming "all the information is classified!" :-)

Absolute bullshit. The names, ID, functions have all been in public view...the 'Public' being the makers or those wanting to get in on an RFQ (Request for Quote) being advertised by the DoD. Even though I never operated (as a civilian) anything more than an old ARC-27 or PRC-119 SINCGARS, all the military radios operational between the times of those two are easily recognizeable to me (well, the VRCs have lots of differences between families but the same case and general form). The operating manuals are NOT classified, just in limited distribution. LOGSA the Logistics Supply Agency is busy making CDs of all the printed manuals for darn near ALL military equipment; it's a piece of cake to pop one of those CDs in an ever-present military PC and read them. LOGSA has a website and even civilians can download some of the older equipment's manuals. LOGSA has some internal priority on what can be downloaded (depending on the cookie generated by a non-military PC). That was a tip I got from rec.radio.amateur.boatanchors and rec.radio.amateur.homebrew. The nomenclatures and quick-look facts are on a couple websites in a long, long, long list. Even BAMA has some manuals for free download plus big link lists for other sites that have them.

Robesin DID list some (questionable) nomenclatures for MARS equipment once but NOTHING else. That kind of info can be had from other hams' personal websites. MARS doesn't normally talk about regular military tactical radio gear. MARS doesn't normally use such. :-)

I found it very amusing that this all went down with
Sony on the same day that the IAU downsized the
Solar System from 9 to 8 Planets.

: (I feel sorry for Pluto. : (

"RESOLUTION 5A"

The IAU therefore resolves that planets
and other bodies in our Solar System be
defined into three distinct categories in the following way:

(1) A planet is a celestial body that (a) is in orbit
around the Sun, (b) has sufficient mass for its
self-gravity to overcome rigid body forces so
that it assumes a hydrostatic equilibrium (nearly round)
shape, and (c) has cleared the neighbourhood around its orbit.

(2) A dwarf planet is a celestial body that (a) is in orbit
around the Sun, (b) has sufficient mass for its self-gravity
to overcome rigid body forces so that it assumes
a hydrostatic equilibrium (nearly round) shape, (c) has not
cleared the neighbourhood around its orbit, and (d) is not a satellite.

(...I know more than a few drunks at the local Am Legion Post who could
qualify for the above after they've had a few shots and beers in them -
grin)

Sorry Al, here's what you said:
> Even if you didn't know "ola" from
> "adios", you can copy Spanish in CW and hand it to the recipient, who
> can read it. Try that with a mic.

Your words, not David's. You implied *Spanish* couldn't
be copied with a mic by a non-Spanish speaking person.
I showed that it can be done.

True, I've never had much success during 2 metere aurora openings with
anything BUT CW. It ain't CW by the time it gets to the other end, but
it's still readable there.

I can do it (and have done so) using phonetics. But that's SLOWER than
CW.

You're preaching to the choir, Dave. I've had to handle foreign
language traffic phonetically by voice and by CW - and I much prefer
CW for that kind of work, even though I prefer voice for most
rag-chewing. As you say, needing it spelled out is quite slow.

I prefer phonetics myself. So are you advocating using the
coercive force of the federal government to enforce your
preferences instead of mine? Of course you are!

I attended 3 weeks of CWPC training at Maxwell AFB in Montgomery,
Alabama. It hosts CAP HQ. Didn't see any CAP uniforms there, either.

Odd, though. The new owner of robesin's old vanity callsign, K4CAP,
resides in Montgomery, Alabama.

Too much work for robesin. So he just "classified" everything. He was
definitely confused by Major Vincent and his key on a necklace. Hah!

If he was involved in MARS, it was probably just to eavesdrop on morale calls from a lonely GI to his wife or girlfriend back home.

No, we want your sorry ass to stay on CB. Better ham radio exams will
help. Let's keep the CB'ers on CB.

1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

SC

I have a better idea.

Lets require all Ham radio operators take an I.Q. test. Only upon passing the test would an operator be allowed Amateur privileges. A score of 130 would be required. This would eliminate 98% of hams and also eliminate overcrowding of the band.

The 98% of Amateurs who flunk would automatically be termed CBers. This shouldn't be a problem because 98% of Amateurs are nothing but self glorified CBers anyway. They just would never admit it.

Problem solved.

Not me. MY federal government dropped the code requirement a while back--and with my blessing. The sky didn't fall (at least not any further than it already had). But having used CW professionally for years, I know both its strengths and its weaknesses. Its main weakness is that not everyone can do it. PSK31 and PACTOR get a bit of an edge on it when there is no large ionospheric phase distortion happening, but require significantly more equipment.

Back in 1976 when I was doing weather observing for a living on Sable Island, we were required to send the results of two balloon soundings and hourly surface observations to Halifax by RTTY. At night that 2mhz RTTY circuit often became impossible. Nor was the AM circuit any good. I frequently got out a key and sent it on CW. It was actually funny when one of the department's high mucky-muck techs came out to the island to fix the problem. I pointed out that verticals were great on 2mhz for a 192 mile path in the daytime but that they got bogged down in DX signals and QRN at night and suggested that he could improve things by giving us dipoles at both ends for night use. I also suggested that a properly designed VHF link would be superior. He laughed at me. Funny thing is, that man's son went out to Sable afterwards and installed a beacon that I could ALWAYS hear in Halifax, running 8 watts on 144mhz.

The thing is, you don't always know what is saving a life. Those weather observations may have made no difference to anything or they may have made a huge difference to how someone flew a 747.

I don't bother with low-IQ clubs myself. Or high-IQ ones for that matter.

I did do some work on the question of human intelligence back in the 60's.
It was interesting. We used factor analysis (now called PCA) and came to
the conclusion that it is a six-dimensional vector quantity--to the extent
you can measure it at all.

Hello:

I belong to several Yahoo Groups dealing with radio.

Got the following, yesterday and today.

Is it legitamite ?

Thanks,
Bob

Dear Yahoo! Groups member,

You belong to one or more email groups provided by Yahoo! Groups
(groups.yahoo.com).

Recently, messages sent to you from Yahoo! Groups have been
returned to us as undeliverable. As a result, we have temporarily
turned off message delivery to this email address.

If you are reading this message, the delivery problem appears to
be fixed. To start receiving your groups messages by email again and
turn your account back on, please visit:

http://groups.yahoo.com/unbounce?adj=164271332,45769&p=115658

(You can also copy and paste this link into your browser, and hit the
'Return' key.)

Once you reactivate your Yahoo! Groups account by clicking the
link above, you will receive messages from your group(s) again.

Tip: You can read messages you might have missed while delivery was
turned off by visiting your groups here:

http://groups.yahoo.com/mygroups

Thank you for using Yahoo! Groups!

Yahoo! Groups Customer Care

Your use of Yahoo! Groups is subject to http://docs.yahoo.com/info/terms/

Hey now wait a minute, 85% is probably the absolute best he (SC) could do -
thus making that the ceiling! So, if you make it 100% - he too wouldn't be
licensed! DAMNED..... that would be a shame. :)

L.

Yes Bob,
quite legitimate, I get it fairly often as I am with Demon and their
spam filtering picks up some of the spam and blocks emails from yahoo.
Just follow the unbounce link and reset it.

I'll bet copying a message by voice from someone with the cyrillic
alphabet would end up a lot better results than copying the same
message with cw.

Thanks for the heads-up on changes at sony. Is there a new premium name
that one can rely upon for the best electronic products (without doing
homework on each purchase)?

Bwhahahahaha.

Statistics courtesy of George McCouch, K3UD.

Total active individual licenses as of May 14, 2000:
Novice - 49,329
Tech/+ - 334,254
General - 112,677
Advanced - 99,782
Extra - 78,750

Total all classes - 674,792

Total active individual licenses as of June 30, 2006:
Novice - 24,877 (-49.57%) (-24,456)
Tech/+ - 320,242 (-4.20%) (-14,012)
General - 132,758 (+17.82%) (+20,081)
Advanced - 71,753 (-28.13%) (-28,029)
Extra - 108,184 (+37.38%) (+29,434)

Total All Classes: 657,814 (-1,405 since the March 2006 reporting
period)

Total all classes (5/14/00) - 674,792
Total all Classes (4/21/03) - 687,860
Total all classes (9/6/04) - 674,788
Total all classes (6/30/06) - 657,814

Total loss of 16,978 since 5/14/2000 (Was 674,792)
Total loss of 16,974 since 9/6/2004 (Was 674,788)
Total Loss of 30,066 since 4/2003 (all time high of 687,860)

We lost:
842 Novice
1,088 General
1,157 Advanced
3,087 Total

We Gained:
1,258 Tech/+

424 Extra
1,682 Total

This is an overall 1,405 decline since the March reporting period
and averages 467 per month for the quarter.

For the months March April and May the new licenses issued
break down as follows.

6,999 Tech/+ 89.3% **
627 General 8.0%
217 Extra 2.7%

Total new licenses issues during the period - 7,849

** These numbers come from the very interesting and comprehensive
website of Joe Speroni, AH0A http://www.ah0a.org

Numbers of US population and the number of hams at the start of each
decade from 1930.

Year Population # Hams Growth Rate
1930 123,202,624 19,000
1940 132,164,569 56,000 194%
1950 151,325,798 87,000 55%
1960 179,323,175 230,000 164%
1970 203,211,926 263,918 15%
1980 226,545,805 393,353 49%
1990 248,709,873 502,677 28%
2000 281,421,906 682,240 36%
2006 657,814 -3.6 %

The 2006 number was as of June 30, 2006.

You'll probably never have to use CW to save a life, but you should learn it anyway just in case. Ham radio is like a spare tire, when you need it you hope it's not flat. CW is like the air in the tire. I know I don't ever want to hear someone say: "Why couldn't you get help, I though hams were supposed to know morse code."

I'd be both, but the CB'ers would have to agree to:

1: No more automatic renewals. CB'ers must retest and
pass all elements required for the Extra class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements, 13 wpm for General, and 20 wpm for Extra and CB'ers.

4: Make the no-code license one year non-renewable.

Tnx, 73, Keep up the good work. Burp.

Logically, the fantastically unlikely is the one thing you SHOULD be
prepared for. According to Murphy, whatever can go wrong, WILL go wrong,
and at the least opportune time.
```

Well I prefer to be prepared for the unlikely event that an Alein
invader will be unable to read PSK 31

Yeah, me thinks you're right. This thing has dragged on long enough. It is getting boring. What IS - IS and until someone - like the FCC changes things - it shall stay as it is. No amount of bitching here will get it done. So, if you want a license, lump it and learn it. If not - its your loss.

L.

I just read the latest QST. In "How's DX?" the author notes that ham
radio "used to be" the prime communication from and to Haiti. But now,
with cell phones, satellite, etc. it is no longer as important.

This is the real world. Morse is NOT the issue.

Relevance (is that the correct spelling?) is the issue.

Ham radio really WANTS to help in emergencies. This is very
commendable. I think, though, we've been sidelined.

We're still there "when all else fails". Morale of those involved remains high, from what I hear / read.

However, in a typical emergency, ham radio is not nearly as primary as it used to be. It's OK. We can still contribute.

Communications have been "universalized"...anyone can use a cell phone. It's natural that communications-specialists see their need waning.

It's OK.

As a hobby, ham radio has a LOT to offer. When I mention to others that I have re-entered ham radio, many people ask "Is that still around?"

Man, of COURSE, it's still around.

If you discuss ham radio with others, do you mention contacting the Space Shuttle? ham radio satellites? weak signal work in VHF/UHF? Sporadic E? Tropospheric Ducting? DX???

How about EME?

You don't have to be doing these things yourself, you just need to let everyone know what the ENTIRE hobby is about.

Morse, data, SSB, FM all have a place.

Ham radio is NOT dying. Hams are. Share our hobby, in ALL its forms, generously with those you know. The rest will take care of itself, for better or worse.

John

>Total all classes (6/30/06) - 657,814

Change 5/14/00 to 4/2/03 - ***13068
Change 4/2/03 to 9/6/04 - -13072
Change 9/6/04 to 6/30/06 - -16974

What a perfect example if ignoring evidence that doesn't back up your
argument. There was no change in Morse from 5/14/00 to 4/2/03, yet we
GAINED over 13,000 hams, so how is a Morse requirement decreasing the
number of hams?

3795. Radioshack / Realistic Pro 2006 manual

Newsgroup: rec.radio.scanner
Date: 2006-08-27 07:19:33 UTC
From: Erik <erik.knol@gmail.com>
Message-ID: <1156663173.838216.141680@i42g2000cwa.googlegroups.com>
Source record: 6825

Does anybody knows if, and where, I can download the user's manual (or service manual) for this scanner?
It's the Radioshack/Realistic Pro 2600 400 channel Model no. 20-9145.

Thanks!!!!!

3796. Re: You'll probably never have to use CW to save a life.

Newsgroup: rec.radio.scanner

You've insisted on posting this crap so many times just about anyone with more than two or three brain cells would be sick of it by now. Why don't you just crawl back under the rock you crawled out from under?

At this point, even a relative moron should get the point that there are a bunch of people that really don't give a damn about CW. That you do is not the point, but your continual posts about it are the point. Therefore, your continual posts lead me to believe you should be seeking mental help. If you don't think you need therapy, how about you get a life and if you are so Pro-CW, why aren't you on the bands right now?

Though I'm an Extra and passed the CW requirements shouldn't make a difference if I choose to operate phone. If the requirements change and new Hams aren't required to take the code test, am I going to be pissed? Hell no, because I took the tests when I did because I wanted to be a productive part of this hobby, not wait for an easier ticket in. I learned it, just as a huge number of others have, but none of us wish to push it like you seem to want to. Even the most die-hard CW fanatic is spending his time on the bands, not on the internet trolling for arguments.

Now, to provide a response to your query: It is extremely unlikely that with all the means we have for contact in the case of an emergency, that CW would be the only way to make contact, particularly if you live in anything near an urban evironment in mainland US. First and foremost, there has to be someone else that will respond to you, and given the things going on with the hobby lately, I doubt that CW will be the safety net you'd like to believe it is.

For myself, I have HF and VHF in both the house and vehicle, and have the VHF radios all programmed with all of the local police and fire frequencies. In a true emergency, I wouldn't lose a moment's time worrying about whether it was legal or not before I keyed up on a public service/fire/police frequency if it meant saving somebody. Would CW help? Not very damn likely, as first I'd have to key up the HF rig, get to someone that could relay, pass a message, hope like hell that they actually did call the proper authority, (and were believed), and so on. You can bet I'll get attention right away if I key up on any of the public service frequencies, and they damn well will respond, if for no other reason than to find me. If that's what it takes, so be it, they can fight it out in court later, and I'd get so much media attention they wouldn't dare push it very far. On the other hand, the likelihood of actually being believed using standard, HF and CW procedures, or getting help in a timely manner to actually save a life is an extremely remote chance...

I rarely filter anyone, but you've definitely earned the "plonk" of
being filtered. Say Bye-Bye ! ! !

Why in the fuck don't you email him and find out? This was posted to:

rec.antiques.radio+phono,rec.ham-radio.misc,rec.ham-radio.swap,rec.radio.amateur.policy,re
c.radio.boatanchors,rec.radio.scanner,rec.radio.shortwave

and all but your group was removed before sending.

Jeebus Faust, learn how to head a header or at least click "Show
options" at the top of the Google post if you use them.

We wanted your newsgroup to know you are stupid. I wanted you to know I
will block your email if you send me crap. Savvy?

--Rick AH7H

Rick...point well made, tho a bit wordy.
I happen to be in a position whereby I work in law enforcement and have more that one HT in the home charger, said HTs being on the local PD freqs.
Save a life? CW? Not hardly! That is a moot argument, one with no merit save for the spammers who wish to continue the thread for their own, selfish entertainment.
In an emergency I use one of the HTs. They work even when the cell phone service is out.
In a true emergency, CW is not fast enough. It is archaic. It simply doesn't cut the proverbial mustard.
Keep a Marine battery on hand and keep it charged. One can work any number of radios from that.

'Nuff said.

I do happen to know the morse code. At one time I could do 30 wpm.

But the chance that I shall see, in my lifetime, someone drowning in a river when I have with me a battery-operated transmitter, a receiver, an antenna, ground spike, and a morse key is about one in 10,000,000,000.

I would be far more likely to plug in the microphone.

In any case, by the time I had got the gear fixed up and made a suitable contact, the poor victim could have floated out into the Atlantic Ocean.

It would be a good idea to dump the equipment and run downstream along the river bank to the nearest safety belt.

Reg.

nah you use the ground spike to achor your antenna to use as a safety
line the tranmiter might make a decent grip might not and then go in
and save the guy
at least the troll is on topic is all

I'm tired of playing around with the wheat lamps used to backlight the front panel and would
like to convert to LED. I don't care snot about retaining the dimming feature. Any one done this?

You could eliminate the tests, or you could increase passing levels and
I suspect the results would be the same. Fewer and fewer people
joining the hobby.

There are MANY reasons why ham may not be as popular. NO ONE reason is THE reason. Code sure isn't it. It didn't stop the many who desired a license from persuing it. If you want to do it - you will - simple as that. EFFORT is the name of the game!

> Slow Code wrote:
>> Let's keep the CB'ers on CB.
>>

Many a fine CBer has moved up to Ham - and improved the hobby. CODE didn't keep the scum of the bands from operating there ON CB OR now in the Ham bands. SO - CODE IS NOT THE REASON.

>> 2: The passing score for written exams needs to be raised to 85%.

>> Tnx, 73
>>
>> SC
>

With the way you've been talking - you (SC) couldn't even do 85%. SO, you'd be cutting yourself out.

I've said it before, I'll say it again - there are MANY things in life you MUST learn to get by, some by pure need or desire. You "LEARNED" to drive, had to study the rules of the road. You "LEARNED" how to do many other things - and I'm damned sure "studied" things in school - maybe even college or post high school to get to where you wanted to be - maybe took an exam for a job promotion. HAM is just one more thing to "learn". For Christs sakes, if you had EVERYTHING handed to you - it wouldn't be worth having. To JUST have a "DRIVER'S LICENSE" "GIVEN" to you - would produce havoc on our roads. To JUST GIVE AWAY "PILOTS LICENSES - would be devastating to many when they come crashing down. To JUST "GIVE" Radio Licenses away - regardless class or whatever - would produce havoc on the air waves. SOMEWHERE - there HAS to be SOME control.

ANYONE not willing to work for something - is PURE LAZY..... NO other way to put it. I suppose those of you whining and bitching - never had

the pleasure of "satisfaction" KNOWING you "passed" a test by KNOWING the material - NOT having it given to you.

THIS isn't ALL JUST about code anymore - our whole freaking nation is dumbing down and that is SAD. AND it is getting to be a "lawless" society where no one cares anymore - they do as they damned well please. Be it on the telephone, radio, highway, waterways, in the air..... where ever - doing whatever - they're not supposed to be doing. Step on your neighbors rights but damned if they're to step on yours. That logic creates more troubles.

This sort of thread will continue as long as there are whiners who don't want to EARN a privelage - they want it "handed" to them. No wonder this country and/or world is so screwed up.

L.

The point I was trying to make is that the amateur radio hobby matured about 3 decades ago. It's membership is aging rapidly and the number of active participants is declining. As the baby boomer generation dies off at an increasing rate the amateur radio hobby will continue to fade away. Fiddling with the test requirements isn't going to magically entice younger blood away from the many other license-free ways of communicating. I would venture to say that you could open the ham bands completely CB style and not get a big jump in membership. There are just too many other interesting, easy to use ways of communicating that that younger people are accustomed to using. I wish it were otherwise.

Making the ham radio test more of a challenge as you suggest misses the point completely. The point is that there will be a diminishing number of people with any interest becoming a ham, no matter what the requirements are.

BULL SHIT? TRY a bit of effort in some of your spelling dude - your website sucks with misspelled words as do most of your posts.

EFFORT IS required in most anything in life - worth having. For some jack off who thinks we NEEDED this war - then why don't you MAKE AN EFFORT TO HELP FIGHT IT. Maybe if we're lucky, you'll be wiped out instead of a soldier who didn't need to be there.

Don't even bother replying jack off. You're barred from my screen.

3838. Uniden SC230 Quick Key question

Newsgroup: rec.radio.scanner
Date: 2006-08-27 18:14:44 UTC
From: "Joe S." <anon@mous.net>
Message-ID: <ecsnfr01q3h@news3.newsguy.com>
Source record: 6920

How do I use the Quick Key function on the SC230?

Yesterday I joined 160,000 of my best friends at Bristol for the night race. I took my new Uniden SC230 and my trusty old Radio Shack PRO-89.

Before leaving, I updated freqs on both scanners. Also, I followed the instructions to set up Quick Keys on the SC230 -- go through the menu to a car number, set up a Quick Key for that car. I set up the following Quick Keys:
-- MRN-PRN Broadcast: 1
-- Jeff "Squeaky" Gordon: 2
-- Jr: 8
-- Fat Tony: 3
-- Jimmy J.: 4

I thought that all I had to do was hit the Quick Key and the scanner would go to that freq. Wrong. If I hit any of the keys I had set up, all the scanner did was "beep" for an error and keep on scanning. After about 30 minutes, I stuffed the SC230 into my backpack and pulled out the PRO-89 -- because the 230 is too much trouble to tune.

For example:

-- To go to a car on the 230: CAR>(Enter car #)>ENT>Scanner shows a freq>ENT and the scanner goes to the car freq. THREE button presses plus the car #.
-- To go to a car on the PRO-89: CAR>(Enter car #)>CAR and there it is -- TWO button presses plus the car #. And, if the car # has three digits, all you do is hit CAR>(Enter the car #) and the scanner goes to the freq -- ONE button press plus the car number. This is really convenient with MRN-PRN in the scanner as Car #100.

Still, the 230 would be much more convenient if all I had to do was press one button -- the Quick Key number -- and recall the car set on that Quick Key.

How do I make the Quick Keys recall a freq with a single key press??

Thanks.

You "could" be and may very well be right in that regard as to the numbers increasing or not if the bands were completely opened. But since most of this crap evolved around CODE and then the "learning" ability of "exam" material - those issues are not the <complete> problem. As I said, if you want to "learn" anything, effort is the key. All through our lives, we all have to LEARN "something" to make us who/what we are in life. You learn to do your job, even if it isn't from a text book. But, you have to admit - except for sweeping floors, pumping gas, washing windows, etc..... it DOES take "effort" to learn the tasks. Once you master them - then usually it is a piece of cake. "Learning" should never end for anyone - until their number is up here on earth.

In code, you learn ._ is "A". In driving - you learn to put your left turn signal on and then turn the wheel left - to make a left turn in your vehicle. In a factory or on a construction job - you learn hand signals to instruct a crane-man at a job site. Whatever it is - you learn "something" to get you by in life - be it a job, hobby or whatever. In most cases (except code) - NOT learning - could get you or others injured or killed.

I DOUBT - anyone jumped in a car the first day and went and passed their drivers exam - it took EFFORT to learn to drive (safely). I DOUBT anyone - jumped in a plane and passed their pilots test the first time in the plane - it took EFFORT. Even to pass a physical ability test for some jobs - TAKES EFFORT. Any SOLDIER or PRO or even high school/college athlete who has

excelled - will tell you that.

To the screwball who said BULL SHIT to "effort" - he claims to be an EME user on his website. I'm DAMNED sure he didn't just wake up one day and decide to try EME - and be eh - fair(?) at it! SOMEWHERE along the line - it took EFFORT to acquire the knowledge, license and materials to do so. Too bad he doesn't make some "effort" to "spell" properly - MOST of his bull shit has been misspelled so poorly, he comes across as a tard. No wonder he gets picked on..... Misspelled words, "NEEDED" wars, etc..... SHEESH. I misspell a word here and there once in a while in error - as do many others. BUT there are SOME who seem to KILL IT when it comes to spelling. They never heard of "spell check"? Can't even make effort to use THAT to make them look a bit brighter.

It doesn't matter how easy or hard the tests are - Code or NO Code - the point here in this thread and others similar is - it seems some want it "handed" to them and all I'm saying is EFFORT will help you get it and you'll be rewarded - your achievement - be it a license, an upgrade in license OR a job promotion with subsequent pay raise or position. So what if you never use the code again to save a life or just to chat on the air - who cares? To pass the muster for some promotions in the service, you have to prove physical ability, and some of those things needed to be done - you may never have to make use of again. Tell your senior officer you're not going to do it and see what you hear in return.....

IF YOU WANT IT BAD ENOUGH - YOU"LL DO IT. Of course - weinie boy who thinks effort is bull shit and believes we NEEDED wars - wouldn't have a clue. So the quiestion is now - did he cheat on his exam and had his license handed to him OR have the equipment donated to not have to make the EFFORT to acquire it all?

Opening up the bands won't be the answer to the "population" of the bands. IF I were God, had a Crystal Ball, I might be able to give the "exact" answer. I've "never" claimed to have it nor do I now. All I can say, is we know where we're headed and it will be interesting in say 5 years or so - to see how we do indeed end up. Changes "could" come about to revive it, open the bands up OR shut them down. Right now, they are somewhat protected by Vongress, but the Congress members are usually able to be bought out by special interest groups - so - NEVER SAY NEVER..... we could be sold out next year if enough of them get their heads together. Then - all of these threads will be moot points. Hell, we may end up paying to type/read this - over and above our ISP payment. There WAS a move to do so..... Nothing to say it couldn't happen if someone tries it again.

L.

Being totally unfamiliar with this particular scanner - he "might" have a power supply issue of sorts. I had a radio come in the shop once with bulbs that kept blowing out - a previous tech did nothing other than replace the blown bulbs - three times - without trying to corrrect the issue. I placed a resistor in line and no more blown bulbs. The surge when turning the set on - apparently was more than the bulbs wanted to see - even though the readings from the power supply were "as spec'd". The set worked flawlessly otherwise and since. THAT set was the only one I had seen of that model that had that issue. I had known many who had the same model with no issues.

That could be a simple repair - without having to do any real mods.........

Just my 2 cents

L.

Ok, what if you were stranded on a desert island, and had to use code to
save someone's life?
Could you use the coconuts to build a radio in order to send said code?
And if you could build the radio out of coconuts, why not just build one
with a mic and speak
the miracle of life into being?

And ever so slowly we creep up on the *actual* point....

pick a freq, pick a mode, pick a language, pick a moment in time.
Nothing is perfect and CW or no CW, it's about circumstance, not code.
Then again, you can back it up one more and acknowledge the foolishness of
the whole CW argument.
As it stands, hams are so crazy they somehow think they are the only hope
for mankind.
I pray that farce never becomes fact!

Everything has it's place.
Ham radio is a novelty. CW is a novelty within the same. That's all....
As long as there are 40wpm ops out there that can't program a radio, it's
just a bunch of
ding-dongs arguing amongst each other, looking like a bunch of ding-dongs.
And it goes both ways.... no reason to ditch CW but this "my tapper is
faster than your tapper"
stupidity is just phallic and pathetic. Which finally brings us to the
overall problem...
As usual, the last word in any hammy hashing is the same.
Control freaks needing to feel in control, and the subject matters not.
That's why these goofy threads carry on forever.

Well... no, I got the point just fine. I can't imagine being surrounded by Spanish-speaking people needing a code interp, or being on a CW freq anyway, while some emergency happens to be taking place. And yeah, I'm elite like that... I have a gift for gab... just like a monkey can be trained to tap out a code of communication, I can parrot what I hear. It [or 50wpm CW] isn't intelligence in any way, it's just a stupid circus trick. Once again..... this wasn't or isn't the issue anyway... No one said there were no pros to the mode, just that the whole "save a life" thing is laughable. This argument jumps from an issue of speed, then to the generation gap, then to simple name-calling banter. It's quite humorous and totally stupid. Kudos to the OP troll! LOL

Want to see interest in radio pique?? Open up a band specifically for
unlicensed broadcasting. Not CB, not ham, but actual broadcasting. I can see
tens of thousands rushing to get in on that one..

And for the millionth time, all you control/speed freaks just don't get it..... If I could take down a message in CW at 200wpm in High German, guess what? It'll take me hours to locate a German to translate it. SO..... shot down yet again, a big burning ball of fire falling from the sky beepin' SOS till ya hit the water right next to a burning boat...

Let's get back on point please. The question was if you had to use CW to save a life, would that person die?
The answer is simple. If the person in question knows CW, then no, and if the person in question doesn't know CW, then yes.
How hard is that? Why can't everyone keep to the issue?
rb

The problem with young people anymore is that they don't communicate face to face.. if it's not on the phone, or some instant messenger, they don't communicate at all.

Ok.... you just ruined your whole argument.... you're now comparing
commercial and professional ops to amateur ops.
What is your point? The issue here is hobby radio operated by hobbyists.

The dark question has yet to be asked anyway... "Should amateur radio ops be
held to professional standards?"
Or maybe it's something about saving a life with CW... it's kinda muddy at
this point....

Excuse me? If you are going to operate on a worldwide basis, you should be
well versed on world languages so you don't have that problem. Ask any
hi-speed op and they should agree.
The funny part being most all foreign ops know English and most US natives
are small appliance bulbs in a world of Xenon driving lights.

LOL.... I assume you think you've made a point at any time?

It's a simple yes or no question....
If you had to use CW to save someone's life, would that person die?
Stay on point please.

Sheesh, why would we be in the CW band in the first place, and then why
taking down code or voice in a foreign language we don't understand?
That Mister, *must* be the epitome of ham....

You know, there are children starving in South America, Babies being
slaughtered at birth in India, and you
think some stupid ham op parked in a chair in poshville USA has a clue about
anything that really matters?
Oh! I know CW, I know CW! I passed a message once and saved the world! And
for the next 30 years I bumbled
around in my back yard drinking beer, eating donuts and doing nothing for
anyone except my own self.

Arrogant Americans lost in space.
That's thick.

Bam... burnin' beepin' ball of fire trailing smoke to the white bubbly patch
in the ocean.... [next to the beepin' burnin' boat]...

Let's get with it people.... are we have a commercial radio argument or an
amateur radio argument???

If commercial then we all agree, argument is moot.

If amateur, it doesn't matter as it's just a hobby, argument is moot.

Make up your mind folks. Either this is a stupid argument or it's a stupid
point to argue.
[hint: its the one that's stupid]

I thought it was illegal to change modes during the EMF stage... ??
You should be able to remodulate your carrier to offset the gravimetric
effect on the signal
as it nears subspace. I scavenged a modulator wheel from an electronic piano
and work it with the left
hand whilst straight-keying with my right, as obviously this can't be done
with a keyer or bug of any kind.
Manual manipulation of each character's component time/phase is a must to
get a synch.

they don't want to comicate even then if the other party does n't want
to xactly agree with them all you have ot do is read RRAP to see that

Uh, wanna try that again? This time use English.

ARRL threw principle out the window when they caved in to the demands of the Lambda Amateur Radio Club (LARC). It was a sad day for me indeed when I opened my beloved QST magazine and there on the pages were photos of queers on a Tropical DXpedition, and in living color no less. The ARRL wanted us to embrace a sick perverted lifestyle and be one big happy family. To me, it was the spark that signaled the death of a once proud organization, and it turned liberal.

Now the queers have all but taken over, they're like the military wing of the Democratic party, and always in your face. It's not even safe to take your kids to Easter egg hunts anymore. I know you're all going to disagree with me, but a man touching and sucking on another man's cock and screwing his ass just ain't right. The ARRL promoted this, now look what happened to our radio groups now that Mark, Roger, and Lloyd have come out of the closet.

That because they're all appliance operators, they don't want to put forth
an effort to learn and it will end up sounding like CB.

Mike,

I can burn you a copy of Police Call V6. Only problem is that it asks for a word (usually the last word) of a page in the book. Sort of a password. Comes now the rub, I can't find my copy of the book!!!! I'll be looking.

In the mean time, would you like a disk. Email me and let me have an address to send it to. Hope this is of help....Eric (in California)

OK.... taking a poll....

By replying only in CW, either text dit-dah, or periods and hyphens......

How many people actually read that, and what is your analysis of the report?

I am running a script to see how long it takes you to click reply, enter
your response,
then click send. Your effective scaled-score code speed will be calculated
from those particular
clicks, along with the character count of the message. You will be made fun
of, according to your
CW speed. Anyone less than 24wpm will be required to take the new FCC
remedial code speed
Enzyte Exam for phallic phlops.

Gentlemen, gud luck.
rb

Huh? You mean there is something besides CW?? Man, don't you know CW saves lives?!?!?

Listen, Weak signals are for CW work on HF while boats are burning. Contacting the space shuttle is just pointless unless you're correcting their keplerian elements for the return flight path or asking if they really drink Tang, Sporadic E [aka EMF bombing] is really pissing off the Condensation Entities that periodically enter the atmosphere to scan for intelligent life, and tropospheric ducting is a lie. I happen to have the control codes to several am-sats and I randomly change the freqs all the time, and you suckers fall for it without fail....
And DX? Hello....? Internet....?
:-)

Welp, when the AF took the airplanes away from the Army in 1947...

...this guy named Sikorsky came along and sold them some helicopters.
Anyway, they were a lot of fun and the idea really caught on. Now the
marines have them, too. Robesin says he worked on helicopters in some
capacity, and got hisself involved in 7 hostile actions.

The aluminum skin of a C130 is sort of hard to see through. The only craft that I ever saw with a glass underbelly was a tour boat in Florida.

But you can rest assured that neither robesin nor the CAP was flying that C130.

I bought my 8500 brand new and is on constantly for hours at a time
every day. Never had any burned out lights. Just the driver transistor
had gone bad.

20 is SLOW. But the only way to learn 35 or 40 is to learn 10, 15, 20 etc.
And the best way to do that is get on the bands and DO it instead of making
rude noises at the people who CAN.

Phonetics on SSB are usually a lot slower than 20wpm, though.

We have three tests her in Canada now. The Basic gets you on the air.
If you get an 80% or higher score you get HF privileges with that.
You're limited in power and must use commercially built, approved gear.

If you want to roll your own gear or put up a repeater or something, then
write the Advanced. You'll get full HF privileges.

If you want to be known as morse proficient, then take the code test.
That will get you on HF even if you just PASSED your Basic. But if you
already have the Advanced, then it will get you a nic shiny morse
endorsement and a sense of accomplishment.

And no, the sky didn't fall any further than it already did when we
dropped the code requirement for Basic and made it VHF only.

Well, it certainly happened to me. Of course I can't say whether it
actually SAVED any lives. Because maybe they would have been saved
anyway, though it sure helped that I could figure out what was wrong.

But you see, a lot of ships used CW at that time.

> And yeah, I'm elite like that... I have a gift for gab... just like a

50wpm is relatively easy. Now back in 1975 when I was out on Sable
Island, I broke in on some guys on 80m with my nice new computer,
programmed to send morse from the terminal keyboard (but still requiring
a human ear to hear). They were going 65 and wanted to know if I could
"copy the morse code." One kid there used to QSO me and he'd start out
at 60 and ramp up. He was 13.

> anyway... No one said there were no pros to the mode, just that the

> the OP troll! LOL rb

Well, to be honest, I leave my keyer set at 25wpm. That's a good steady
speed for general working. I'm only likely to speed it up if I'm in a
contest or something.

++++++++++
Fire Chief was the regular grade sold by Texaco. Their premium was
Sky Chief.

In the 1950s, Sunoco sold only one grade of gasoline, which was
supposed to be a "near premium". Its gimmick was that it was dyed
blue, whereas other gasolines were yellow to red. In the 1960s, its
super-premium was Sunoco 260 from the "custom blend" pump.

Sorry... my bad... is it 35 now? I stand corrected.

Back to the chant...

If you can't do 35wpm, you should stay off the bands!!
Seriously people, think about it... do *you* want blood on your hands
because you're a slow-beepin loser?
Lives are on the line, in case you aren't paying attention.

This is serious business and requires a dedication as if it were... your
only purpose.

Unmotivated 25wpm losers need not apply.
rb

Huh? How can a fast CW op *not* save a life? Have you read this thread at
all?
CW = Gift of Life.
Fast CW = Hand of God.

It's in the Extra Class manual....

> And that's why I'm watching TV from a 12ghz satellite signal right now.
> Putting the antenna that high makes all modes pretty much equal as far as
> signal-to-noise goes.

AAAAAAAAAAARRRRRRRRRRRRGGGGGGGH!!
Holy crap.... I hope no one else reads that.. It'll kill the entire
Comm-Post pile we're making, and then
people will just go back to swapping radios or something. [Perish the
thought!]
rb

3985. FS: G.E. Monitor Receivers

From: Hunchy <sx43@gmail.com>
Message-ID: <kDKIg.4543$pX3.4502@trnddc07>
Source record: 6614

For Sale:

G.E. ER-106A VHF High-Band monitor receivers (not scanners). These receivers are currently operating in the 173 mHz portion of the band. These are the units that look like MVP radios.

They are very clean, have decent sensitivity, and nice audio. 120 VAC operation only. I have 4 of these. $25.00 each + shipping from 93240.

Please respond to: sx43ster at gmail dot com

Thanks

LOL.. Now that's what I'm looking for! What else ya got? Let's post each reply twice from now on, OK?

In other news....

Stay on topic Dave.... the issue is *CW* saves lives,[or results in other holistic happenings] ok?

I swear I've already explained that to ya...?

We've proven many posts ago that brain cells have nothing to do with ham radio, this thread or those in it.
My fav site, www.hamsexy.com will explain it all.
rb

radio content:
I think I'd even consider an M1225 in trade, instead of the Spectra.

From: Hunchy <sx43@gmail.com>
Message-ID: <x5LIg.3375$nR2.1441@trnddc03>
Source record: 6626

Are any of the scanner manufacturers making receivers which accommodate the new "narrow" bandwidth? The compliance date for domestic spectrum users is January 1, 2008.* When the new plan comes into effect, the max deviation will then be 2.5 kHz, instead of the current 5.0 kHz.

* The new format does not apply to low-band, hams, aviation band, or 800 mHz (yet).

Hunchy

Sweet Jesus!! Man, are you crazy??? Do you know how many hammies are gonna
see that and
what kind of search and rescue operation you've started....
Now lives will be lost and thousands of dollars wasted because of that
little trick.
I hope you're proud of yourself.
rb

4016. New scanners from Radio Shack??? anyone know?

Newsgroup: rec.radio.scanner
Date: 2006-08-29 00:25:02 UTC
From: bitwisebob <bitwisebob@gmail.com>
Message-ID: <g727f2p5bd40d1a5i5vedoldhb4cfol57l@4ax.com>
Source record: 6652

The Pro-96 has been around for a while, any rumors out there about new scanners from GRE/RadioShack?

looking mainly for digital scanners, needed to hear local PD/FD....

Good on ya then! Do upgrade whenever you can, coz hammin' can be fun if you
can find a decent bunch to hang with.
Learning 5wpm is pretty easy and gives you a new "toy" or "language" to play
with if you are so inclined.
The big plus being the new privileges and theory, and all the hi-tech
progression in radio going on in the 21st Century!
There's lots to get into.
Gud luck,
rb

It sucked.

Just got a message on the somalia reflector today. Seems the al qaida
is well liked in somalia because the country has been through 15 years
of chaos and lawlessness, and the islamists are now imposing their law.
I guess any law is better than none.

Reminds me, in part, how hitler came to power.

Robesin's flight suit is sage green. Looks like a real one.

Well, at the moment my radio is on 3729 LSB. But it will shortly be on
3652 CW.

Nope. It's not about antennas, so that makes it off topic in the group I'm posting in.

It's speculated that GRE probably won't release a new model until some rebanded systems are online. Erring on the side of caution, I suppose.

In the meantime, the PRO-96/2096 works quite well unless you need to track 700MHz trunked or LTR systems. In that case, the newer Uniden scanners (396/996) should work for you.

All of the above *should* be able to be modified to work after rebanding takes place, but nothing is 100% certain. Hence, it may be wise indeed for GRE to wait.

4032. FS: Pro 2006 400 Channel Base scanner

FS: Pro 2006 400 Channel Base scanner. No gaps in coverage (25-1300
MHz) A bargain at $125.

Common questions:
Yes, the backlight is bright
Yes, it receives cell phone signals
No other modifications have been perfomed.
No, I don't have the box.

Who's gonna see a single want ad in 300 postings about nothing?
Who wants to pilfer 300 postings about nothing to find a sale ad?
On the Somalia thing,
Do you mean extremists/terrorists that claim to follow Islam, or just basic
Islamists?
It looks like you mean the former.

Please understand that Al Qaeda is a group of terrorists/extremists, it
doesn't matter what religion they
claim to follow.

All you have to do (if you've got about 8 hours to spare) is go
through Google archives since before they bought it from
DejaNews several years ago. "Robitussin" has thousands of
postings in the same venal manner he continues to use...
especially his self-promotion as heroic USMC veteran which
he has never, ever proved through any third-party references,
digitized documents, or much of anything else other than his
own AOL home page and self-description on QRZ.

He is clearly into his own fantasy of imagined superpowers
without the aid of Stan Lee.

:-)

"Sidetracked?!?" :-)

I put this message into the Captain ARRL Superpower Decryption
machine and the machine broke down.

Last I looked (which was yesterday) there were NO Public Safety
radio services which used "CW" for either "life-saving" or distress
calls. The USCG doesn't monitor the OLD 500 KHz international
maritime distress and safety frequency any more. International
Civil Aviation Organization long ago stopped any need for carrying
"CW"-proficient air crew on over-ocean flights.

This "vital need" of maintaining a "pool of trained (morsemen)
operators" in the mighty amateur radio (militia?) ranks is a
wigment of olde-tyme morsemen's imagination.

In truth, I haven't checked out the Civil Air Patrol. Maybe they
have some kind of "need" for morsemen even though they use
121.5 MHz for emergencies just like all the CIVIL airways do.
[transponder squawk to 77 or 7700 if that is installed; 243 MHz
if a REAL military aircraft]

We'll have to see what the "pilot in command" of a TN CAP
two-seater has to say on that...if he isn't "busy" with his
"life-saving air patrols." :-)

I know Uniden is - the 396, 330, 15 and 996 - maybe some others.

Well, let me ask, from the point of view of a potential noob to the hobby. What use is the code requirements?
I can't really see in today's era, the need for them? I've been surfing around looking at ham and talking to
an old friend that had a license and it look interesting to me.

But, given that many professional people like myself are stretched for time, what good does all the licensing
and code requirements do for you besides build up boundries to doing something new and fun?

I'm in a pretty technical field, and I study to keep up in that field everyday, the last thing I want to do,
is have to spend my weekends studying to talk on a radio. If less stringent requirements were there, I could
easily afford the tools of the trade, and would like to just jump in and start working with a ham setup. I'm
particularly interested in exploring the amateur radio/computer connections.

I have no problem informally looking up information and learning on my own (heck, that's what I'm doing in
the USENET group to begin with)...but, I just don't have the time for archaic rules, regulations and codes
that as far as I can see...really serve no real purpose but, to keep out busy people that might like to
participate.

Can you give me valid reasons as to what useful purpose in today's age they serve?

Thank you,

noonespecial

The 'use' is something you just can't understand. The 'use' is a commitment of time and talent which adds value to the license. The 'use' is investment.

4050. Basic Police/EMS scanner purchase advice

Newsgroup: rec.radio.scanner
Date: 2006-08-29 20:43:30 UTC
From: kriskane@gmail.com
Message-ID: <1156884210.726430.181810@p79g2000cwp.googlegroups.com>
Source record: 6680

Can of worms topic, I'm sure. To avoid the "how long is a piece of string" nature of this question, I'll give some particulars.

I'm looking to buy a good basic police/EMS scanner for my father, a retired police dispatcher, to get back into the hobby (he hasn't actively listened in a few years). The scanner he has now, an old basic Uniden model, evidently can no longer handle the frequencies the LEA has switched to (he's tried to program them to no avail, I'm assuming it's just because of a shift in mhz to higher bands).

He lives in a suburb of Washington DC so anything with good range that could get his local city/county frequencies and those of nearby (within a five to ten mile radius, max) would be great, as would any public government/military frequencies he might be in the range of. External antennas are definitely an option, as he's got a roof-mounted dinosaur he used to use for CB radio as well (going to try to get him back into that as well).

He's getting "on in age," as they say, and his eyesight is now quite poor, so anything with a larger, well-lit display would be a definite plus, but it's not a deal killer as I'd probably be programming it for him and I don't know that he'd need to see the frequency display to know the channels after a while (and honestly, I don't know that there'd be a scanner unit with numbers large enough for him to read).

I'm so inexperienced with this subject that I wouldn't even know how to approach the topic of pricing. I guess we're looking for a "solid, middle of the line table-top model," but don't need a lot of complex bells and whistles he'd have to manage through an array of tiny (and therefore pretty much invisible to him) switches and dials. I'm really looking for the good old-fashioned "fire and forget" setup approach, if such a thing is even still possible. I do see him at least once a week, so occasional tweaking, if necessary, would definitely be fine.

I realize this is a bit of a broad question, and I'll thank everyone in advance for the patience and their replies. With his fading eyesight, he's gotten a bit "down at the mouth," and this is one hobby he used to enjoy that he could still do given his current circumstances, and I'm just sort of looking around trying to find something to get him involved and interested in again that may lift his spirits.

Thanks again--I look forward to your replies. Feel free to reply also to my email address: kriskane (at) gmail (dot com).

In other words, you just can't come up with a valid
reason other than some emotional-traditional one, can you?

What is the return on that "investment?" Being good enough to
do 1930s radio operating? In a diversified HOBBY?

What you really seem to be saying is that "everyone has to do it
because you did it...so there, nyah, nyah..." :-)

> Balance of original post has been REDACTED.

You have been redacted.

You have been rejected.

You have been inducted.

Here's a news flash: The job of the FCC (the agency that grants
amateur radio licenses...and hundreds of others...) is to regulate
and mitigate all USA civil radio. It does not tailor ham tests to
some nebulous "tradition" of the Archaic Radiotelegraphy
Society (ARS). I.E., it has no reason to demand anyone take a
manual morse code test except under the lobbying by the ARRL.

If you want to "preserve" the ARS as requiring morsemanship for
all privileges below 30 MHz, then you need to make up a Petition
and submit it to the FCC. You can even ask them to RENAME
the ARS to Archaic Radiotelegraphy Society. The FCC allows
such petitioning. They even explain how to do it on their website.

Tell the FCC that you insist on maintaining 1930s standards of radio communication well beyond 2030 by keeping that morse code test forever and ever. The ARRL will love you for it. Go for it!

Motivating hams to be better hams is a good thing.

For example, if you were going to lose your internet if you didn't learn how to type and spell after a year, I'm sure you'd be learning how to type and spell. But since there is no requirement that you have to type and spell properly after a year, you continue on murdering the english language.

There's some real gems in there.

Lawsuits. Robeson sues people, or at least he says he does. In his last lawsuit, he got an Upper Peninsula attorney gratis, then made comments on who his free attorney's wife might be sleeping with. Meanwhile, the person he is suing has yet to be served.

"Bricks through windows, slashed tires, terrorized wives." These are bad things that happen to people who shoot their mouths off, as some people have been told they do. Mind you, Robesin isn't the one throwing bricks, slashing tires, or terrorizing wives. "Other people" do this sort of stuff.

"Dialing..." On Robesin's personal authority as a male nurse and failed Marine, he can make a phone call anywhere in the USA and have you picked up on his say so. Really.

"PUTZ, Putz, putz" Disagree with Robesin and you are a penis with a yiddish accent.

"PEDOPHILE, Pedophile, pedophile" If you disagree with Robesin and you give of your time to a youth group, you are a pervert.

"HOMO, Homo, homo" Disagree with Robesin and you are queer, with lots and lots of inuendo.

Robesin is a national hero, taking part in seven hostile actions as a Marine. Yet, his only overseas assignment is Okinawa. Never been injured, but discharged after only 18 years. Says he's retired. Says he's disabled. Says it's not medical. Says he has been rehabilitated by the VA. "Ask the VA."

Robesin got back into uniform as a Tennessee State Guard "officer" of some kind. Very short lived career.

Robesin got back into uniform as a Civil Air Patrol (CAP) "officer" of some kind. Says he's a Major now. Photo of him in a sage green (not blue) flight suit on his QRZ website. As far as I know, most CAP volunteers are involved in training youth/Cadets. Hmmmm?

Robesin got a vanity call, K4CAP, while in the CAP. The CAP HQ is at Maxwell AFB in Montgomery, Alabama. Then he gave it up. Look where his old call now resides.

Robesin got back into uniform as a male nurse. Says he doesn't wear the white dress uniform. Probably just regular pants and a v-neck lavendar colo[u]red top.

Robesin has military medals. He has lots of medals. Many of those medals he didn't earn.

Robesin used to be an ASSISTANT NCOIC of NMC MARS on Okinawa. Doesn't know the first thing about it. Doesn't know what a MOD is.

"MARS >>>IS<<< Amateur Radio" according to Robesin Yup, you heard it here first.

A well know amateur radio outlet had the owners daughter's photo featured in a prominent amateur radio publication. Robesin said she was selling "Something" but it wasn't radios. He's a swell guy.

Robesin can make comments all day long about how your children won't respect you. His child died from severe birth defects and he knows that no one will make comments about his children. He's a swell guy.

Robesin needs to talk to the wives. He needs to talk to Len's wife. He needs to talk to my wife. He needs to talk to Mark's wife. He wants to talk to them on the phone or in person. He wants to mail them. He wants to knock on my door to talk to my wife and posts partial addresses so you know to expect a visit. Now he makes jokes about Len and Mark's wife. He's a swell guy.

I could go on, but I don't have 8 hours as Len suggests...

So what's the real beef??? I disagreed with Robesin. He doesn't like the way I think.

So what's the real, Real beef? I don't think the Morse Code exam should be retained for an HF license in amateur radio.

I'll say it again ... INVESTMENT!!

If an activity is to have value it must have INVESTMENT.

Whether it be Boy Scouts, Girl Scouts, Little League coach, Soccer MOM, fishing,
poker playing, or just watching tv. All require INVESTMENT if it is to have value.

If you don't/can't make the INVESTMENT, find something else to become involved with.

It has nothing to do with hazing.

If you will read Part 97 (the rules that govern amateur radio), the
government doesn't care about you doing something new and fun. The section
on basis and purpose makes it quite clear that their objectives are quite
different. They want people knowledgeable in ham radio and who are
interested in expanding that knowledge.

> I'm in a pretty technical field, and I study to keep up in that field

Until and unless you have actually participated in amateur radio in a wide variety of aspects, it is difficult to asses which rules, regulations, knowledge, etc are archaic and which should remain as requirements. Notice that the majority of people advocating ditching requirements are those who have not yet passed those requirements, regardless of their age. Note that the majority of people advocating keeping the requirements have passed them and have experience in amateur radio again regardless of their age.

As far as "busy people" go, again refer to the basis and purpose as given in the rules. The government is not concerned about your choice of how you use your time. It has no bearing on what their goals are.

> Can you give me valid reasons as to what useful purpose in today's age
> they serve?
>

Every piece of knowledge has its uses. The difficult part is winnowing through it and decide what should be tested and what should not.

Here's why I think code should still be tested:
1. It is still one of the basic building blocks of ham radio. For example, one of the "hot" digital modes is PSK31. The developer drew upon personal experience and incorporated features derived from that mode to make a robust digital mode.
2. Because it is not "book learning", too many people will avoid it since it is different than the type of learning they are accustomed to. They will falsely think it is hard when in reality it is different. Requiring them to learn it gets them over that resistance hump.
3. Each and every mode has its strong points and weak points. Each of us that participate in ham radio should attempt to gain personal experience in those modes so that we know by that personal experience what those strengths and weaknesses are.

If you are interested, I could construct various scenarios where mode X is the best mode. However, unless you specifically want to know, I won't clutter up the newsgroup at this time with discussions that have been repeated many times by many people already.

Dee, N8UZE

Here's another:

""SOMALIA, THE BLACK HOLE OF ANARCHY

BY AHMED Q. BURSALIID

In mid July 2005 The U.S. intelligence agents, working with local
warlords, have carried out counter terrorist operations to seize
suspects. "Somalia remains the theatre for a shadowy
confrontation involving local Jihadis, foreign Al Qaeda operatives
and intelligence services from a number of regional and
Western countries," says a report by the International Crisis Group
in 2005. The report says the "dirty war between terrorists and
counter-terrorist operatives in Mogadishu appears to have
entered a new and more vicious stage that threatens to push the
country further towards Jihadism and extremist violence unless its

root causes are properly addressed."

The Somali transitional federal government was formed in neighbouring Kenya in 2004 and moved into Somalia June 2005. However, the administration has failed to relocate to Mogadishu, the Somali capital, because the city was considered unsafe. Due to the insecurity of Mogadishu, the TFG relocated to Jawhar, which it later decided to move to Baidoa.

Warlords and leaders of Islamic courts have been fighting in Mogadishu for about five months. This led to the loss of hundreds of civilians and destruction of properties. Somalia, which had been in a state of anarchy for more than a decade, has once again gone to war; this war was somehow different from previous ones. The nature of this war is seen to have some religious and political clash while previous ones were much related to tribal and feudal conflicts. Each one of the conflicting parties is claiming that the other group is related to Al-Qaeda when the reality is somehow different from that. After months of armed conflicts within the capital city of Somalia, Union of Islamic Courts took the lead with enormous points by eliminating the warlords who took hostage the country and its people for 16 years.

United States of America, which earlier denied any allegation of helping or giving hand to the warlords in the fight to weed out the Islamic Militia in Somalia shortly after the takeover admitted that it had been supporting warlords to destabilise the Islamic militia. America has been an active player in the politics of Somalia, and until now its policy towards restoring peace and stability in the war -torn Somalia is somehow obscure.

Somalis believe that it is the right time to take advantage to restore the lost hope of good governance in the country as Union of Islamic Courts led by Sheikh Sharif imposed law and order on Mogadishu, which was seen neither for 16 years. Hundreds of families from overseas countries returned back to Mogadishu, the capital city of Somalia since the takeover took place.

At first Transitional Federal Government welcomed the political change, which took place in Mogadishu as the Union of Islamic Courts disarmed a pack of US-backed warlords that took the country and its people hostage for more than a decade. But soon after the Islamic Militia started to capture some other cities, the TFG warned the Union of Islamic Courts of capturing farther cities. A big gap of political misunderstanding came

in between the Transitional Federal Government and the Union of Islamic Courts, after the president of fragile Transitional Federal Government requested peacekeeping forces from the African Union. As the new Somali constitution inked in Kenya says, "Peacekeeping forces should not come from the neighbouring countries (Ethiopia, Kenya and Djibouti)". Likewise, the parliament passed a motion, which it was requesting peacekeeping troops to Somalia without paying attention to the classification of peacekeeping forces from AU countries and of front
line countries. This has created an escalation of political crisis in Somalia. Ethiopia, which is the common enemy of Somalia has sent its troops to Somalia in an attempt to protect the Transitional Federal Government.

This time, Arab League took the political platform of Somalia to mediate
the two conflicting parties. TFG and UIC were invited to attend a mediation conference held on June 2006 in Sudan to settle their differences. After a reconciliation conference, presided over by Sudanese president Omar Hassan Albashir, the current chairman of Arab League, the reconciliation process derailed with unknown reasons but it is believed that Ethiopia was the main figure, which made the reconciliation process fail as the outcome of the meeting could not meet
the criteria of Ethiopia's plan to Somalia and then, President Abdullahi Yusuf Ahmed, a well-known pro-Ethiopian warlord and his loyal prime minister Ali Mohamed Gedi, a vet scientist started to advocate the
legality of Ethiopian Army presence in Somalia.

The Somalis are of the opinion that the involvement of Ethiopian Army in
the peacekeeping operations in Somalia could cause havoc and deterioration of the political condition of the country in any case as Ethiopia is an old aged enemy of Somalia in East Africa. While a vast majority of the Somali public strongly opposed to deployment of Ethiopian troop into Somalia under any pretext, president Yusuf's political stance towards the deployment of Ethiopian troops in Somalia is clear and also in action by denying the presence of Ethiopian troops in Somalia just to protect his presidential seat.

Since the reconciliation conference in Sudan derailed a number of ministers resigned due to the political misunderstanding between TFG and
UIC. Prime minister declared that he would be nominating successors of the resigned 24 ministers. In addition to that, the prime minister himself survived after the Somali parliament passed a motion of no confidence against him recently.

Moreover, Prime minister of Ethiopia Milez zanawi whose government earlier denied any presence of Ethiopian troops in Somalia told BBC

that
his government has sent troops to Somalia to protect the Transitional Federal Government from the Union of Islamic Courts. While on the other hand, Eritrea is also believed to be an active supporter for the Union of Islamic Courts. Somalis believe that the support from both Ethiopia and Eritrea respectively is much related to a proxy war in between them.
US government warned Ethiopia and Eritrea stop the proxy war they are playing in the Somali territory.

As long a 'Rare DX' uses CW, CW will live and thrive in the DX community.

A DX pile of 100 stations on CW occupies much less bandwidth than 1 SSB station.
The CW contact rate exceeds the SSB rate.

As long a 'Rare DX' uses CW, CW will live and thrive in the DX community.

It's your choice: if you want to play the DX game learn the rules including 25 wpm CW.

If you want to operate an appliance, but an appliance.

thanks ... enough waiting, going to take the digital plunge ... :-)
can't find uniden locally, so radio shack it is.
Looks like Win96 is the way to go for programming software.

Most likely you will need/want to have a radio that can receive
digital signals, which ups the price. But gets you a nice rig.

Without digital you will miss out on a lot; police/fire.

Take a look at these base units. Lots of web reviews to read on
these.

http://www.google.com/search?sourceid=navclient&ie=UTF-8&rls=SUNA,SUNA:2006-03,SUNA:en&q=radio+shack+pro+2096
Tracks trunked systems like a digital hound dog.
Trunked systems, used by many cities and towns, jump from one
frequency to another with every transmission. You need a trunking
scanner to allow you to hear the entire conversation. Digital trunked
systems, which are becoming more common, can only be followed using a
digital trunking scanner. The PRO-2096 follows both digital and analog
sytems, including 9600bps control channel and C-QPSK modulation.
Listen to law enforcement officers and fire fighters, and hear advance
warnings of dangerous weather conditions. Frequency coverage: 25-50MHz
VHF-Lo, 50-54MHz 6-meter Ham, 108-136.9875MHz aircraft, 137-174,
216.0025-225MHz, 406-512MHz, 806-960MHz (excluding cellular bands),
1240-1300MHz.

Tunes virtually all important bands--local marine, fire/police, HAM,
CB, VHF-air, racing, weather
Virtual Scanner Memory Management system stores 11 memory
configurations, each with 500 channels
Preprogrammed for most major metropolitan areas
Alphanumeric display with text entry can show ID code or service name
Easy-to-read backlit control and display for low-light viewing
Mobile/base design with DIN-E in-dash mounting (requires separate
installation kit for your vehicle

From: Dave <W...@comcast.net> on Tues, Aug 29 2006 4:38 pm

>LenAnderson, You have obviously made an INVESTMENT in your
>technical profession.

Yes, I have. Not only has it been intellectually rewarding,
it was also monetarily rewarding...for the last 54 years.

>Make one in your participation in the radio service!!

Kiss my yes, "Dave," I've "participated" in numerous radio
SERVICES of USA civil radio and in DoD contract work from
below LF to Ku-Band. In these previous 54 years I've
communicated from land, from the air, from the ocean
surface...even once "worked" a station ON the moon. Never
once in 53 years was I EVER required to either use or know
on-off-keying manual radiotelegraphy.

>Amateur Radio is a SERVICE!!! If you only think of it as a hobby your thinking
>is flawed.

"Dave," you are SO FLAWED that you can't think straight.
Here's the real story:

Go to the FULL Title 47, C.F.R., and LOOK at ALL the radio
SERVICES. The word "service" used in Title 47 is a
regulatory term denoting a type and kind of radio activity
being regulated under a Part. Go write the FCC if you
don't believe that. But, you won't believe that since you
are obviously stuck in some kind of "patriotic" pipe-dream
where you think a HOBBY activity is some kind of "national
service."

Look in Part 95, the Personal Radio SERVICES. In there you
will find the Citizens Band Radio SERVICE and the Radio-
Control Radio SERVICE. Those are all SERVICES, "Dave."

There is NOTHING wrong with having a HOBBY. It's a fine
hobby in fact. What is wrong, seriously wrong, with your
(observable) thinking is that US amateur radio is some
kind of quasi-military "national need" that is somehow
"important to the national welfare." It isn't. Amateur
radio is about as "vital to the nation" as CB or some
model airplane flyers on one of the 72 MHz channels.

Yes, HAMS get neat certificates from the federal government (suitable for framing) and like to go around saying "they are 'authorized' by the feds" as if that were some Nobel-laureate accomplishment. It isn't. The FCC is tasked with regulating and mitigating ALL United States civil radio. Since amateur radio transmitters emit RF that requires the FCC to regulate it. The FCC, or rather its predecessors (before 1934), decided that licensing was a way of doing that regulation. To get that license required taking a test. That TEST was never, ever any sort of academic achievement thing (FCC was never chartered to be an academic institution), just something to satisfy the FCC that a license applicant was sufficiently knowledgeable to get that license. Note: Satisfed the FCC...not the ARRL, NOT the nebulous "ham community" or even any "Hams in da Hood."

Have you got that straight yet, "Dave?" Did you take some kind of oath of "service" on getting your amateur license? Raise the right hand and repeat after whoever was prompting you on the oath? No? I didn't think so.

I took a REAL oath on 13 March 1952, "Dave," entering the United States Army. A Real SERVICE, "Dave." I did my "eight" and got an Honorable Discharge. From February 1953 to end of January 1956 I worked HF comms in Big Time radio. You can even download a photo essay of that from this link:

http://sujan.hallikainen.org/BroadcastHistory/uploads/My3Years.pdf

It's 6 MB and will take about 19 minutes download over a POTS dial-up connection. If you look closely at those 20 pages you won't find a single thing about "working CW" (on-off-keying manual telegraphy) yet the whole station ran 24/7 pushing about 220K messages a month. It would be IMPOSSIBLE to send that many (some of which were encrypted) by manual telegraphy unless the signal battalion was doubled. It didn't have to be because the messages got through and on-time. That was 53 to 51 years ago, "Dave."

What do you think the military uses NOW for communications? Data, "Dave," Data. High-speed data, "Dave," not some dinky 1200 baud amateur stuff. DIGITAL. Digital can be on-line encrypted and on-line decrypted securely.

You show me where the REAL Services use manual radiotelegraphy, "Dave." They don't. It is voice and/or data, most of it in the field done DIGITALLY.

>/s/ Dave, BSEE, Program Chief Engineer-retired, LGM-118A(RS), MK21/W87

WTF, "Dave?" So, you tacked on a bunch of undescribed acronym things supposedly project numbers or IDs. Are we to be "impressed?" I'm not. I've worked alongside and for PhDs who

didn't bother with IMAGE and all that rank-status-title BS...
WE got the job done, working together.

Amateur radio MIGHT get something done working together. But,
you olde-tymers won't. You have to RULE, holding fast to the
traditions of 50 to 70 years ago...because YOU and all the
olde-tymers had to do it so everyone else has to...and all
you olde-tymer morsemen think that "CW" is somehow "best."
It isn't "best." If you really have a BSEE instead of just
PR BS about morsemanship, you would realize that.

><http://www.strategic-air-command.com/missiles/Peacekeeper/Peacekeeper...>

"Dave," amateur radio isn't about missles. Save your energy
for donating DVDs of "Strategic Air Command" (starring Jimmy
Stewart) to give to impressionable youngsters.

I've been in the smoke-and-fire trade of rocket engines for a
little while (Rocketdyne Division of Rockwell International).
Trust me, rocket engines do NOT use manual radiotelegraphy.
BTW, SAC is GONE, "Dave." A whole reorganization in the USAF
some time ago. No more "oil burner routes" or flying out to
loiter near the USSR (the USSR is gone, too). BTW, there
were SSB transmitters emitting 12 KHz wide RF long before
SAC got the single-channel SSB stuff to use on such
loitering. I know, having to keep a few of those REAL SSB
transmitters running correctly.

Now, "Dave," I can't fault on-off-keying CW any. The key
fob for our 2005 Malibu MAXX uses that. Yes, the last
vestige of high-speed CW (REAL CW) done digitally. Done
by the hundreds of thousands all over the country daily.
Nearly all of them operated by unlicensed NON-MORSE-TESTED
civilians! That Chebbie got in our garage courtesy of
"investments," "Dave." Investments in REAL work, not
playing like big-time 1930s radio ops "jobs" of a long-
past age by AMATEURS.

Dee, the "rules that govern amateur radio" are the ENTIRETY
of Title 47 C.F.R. I don't care that the ARRL pushes ONLY
Part 97. Part 1 has plenty about amateur radio as well as
a few other Parts. Look it up. It's free at the US Government
Printing Office website.

>The section
>on basis and purpose makes it quite clear that their objectives are quite
>different.

The "objectives" of the FCC are to regulate and mitigate ALL
civil radio in the USA, Dee. That's what the Communications
Act of 1934 and the Telecommunications Act of 1996 chartered
them to do (plus quite a bit on wireline comms...which don't
apply to amateur radio).

The "Basis and Purpose" has a lot of POLITICAL boilerplate
in it, just like most of the other Parts for other radio
SERVICES. Get real.

> They want people knowledgeable in ham radio and who are
>interested in expanding that knowledge.

The FCC is mainly interested in all radio services' users
FOLLOWING THE REGULATIONS, Dee. That's their job. The
FCC doesn't "want" people a certain way, only to FOLLOW
THE REGULATIONS.

>> connections.

"George," you've got a whole bunch in this forum who think
that amateur radio is some kind of veddy formal "JOB" with
absolutes on THE WAY THEY DO IT. It's almost draconian in
the insistence of "correct proceedure." No one will get
fired from that "job" if they don't use "correct" ways but
the way they blabber on you'd think they were "supervisors."

>> I have no problem informally looking up information and learning on my own
>> (heck, that's what I'm doing in

>
>Until and unless you have actually participated in amateur radio in a wide
>variety of aspects, it is difficult to asses which rules, regulations,
>knowledge, etc are archaic and which should remain as requirements.

Horsepuckey. Dee, "George" is talking about GETTING INTO
amateur radio. Don't give us this olde-tymer morseperson
"I've operated all the modes there are" stuff. Dee, I've
operated lots more modes on radio than YOU are allowed to
as an amateur.

Manual morse code ability IS an ARCHAIC mode of communications
Dee. ALL the other US radio services have either dropped it
for comms or never bothered with it in the first place. ALL.
The ARRL and the olde-tyme morsepersons insist that the manual
morse test "MUST" remain to "show something" about commitment
and dedication. To WHOM, Dee? To YOU? To da Hams in da hood?

>Notice
>that the majority of people advocating ditching requirements are those who
>have not yet passed those requirements, regardless of their age.

Dee, before you get to the downright-bitchy stage, may I remind
you that some of us professionals in radio and electronics
NEVER BOTHERED WITH AN AMATEUR RADIO TEST? I got my First 'Phone
in 1956. Considerably more testing involved than a ham license
test then. Could YOU get a GROL now? Could YOU get a job
working with radio hardware?

>Note that
>the majority of people advocating keeping the requirements have passed them
>and have experience in amateur radio again regardless of their age.

Yes, nine-year-old Extras possess the maturity and wisdom of
the ages, all through having taken that morse test and gotten
that magic certificate (suitable for framing).

>As far as "busy people" go, again refer to the basis and purpose as given in
>the rules. The government is not concerned about your choice of how you use
>your time. It has no bearing on what their goals are.

Dee, you are LECTURING again. [just how long have you been
in ANY radio?]

Dee, go look at some 1990 documents on the creation of the
no-code-test Technician license. There's a copy available for
free download on the NCI website. Over 16 years ago the FCC
said outright that it didn't think the manual morse code test
suited their purpose in granting an amateur radio license.
The FCC said the same thing in last year's NPRM.

I DO have to remind you that the FCC's only job is to REGULATE
all civil radio in the USA. Their only task is to do that and
mitigate matters of interference with other radio services
(plus wireline but that's not concerning amateurs). Theirs
is not to brainwash hams...that's the ARRL's task.

>> Can you give me valid reasons as to what useful purpose in today's age
>> they serve?

[stand by for the LITANY from the Church of St. Hiram]

>Every piece of knowledge has its uses. The difficult part is winnowing
>through it and decide what should be tested and what should not.

Ahem, to olde-tyme morsepersons, manual morse code skill MUST
be tested for any radio privileges below 30 MHz. That's
engraved in everlasting marble and protected by nuclear-blast
armor plate.

>Here's why I think code should still be tested:
>1. It is still one of the basic building blocks of ham radio.

Horsepucky. It was only the first mode used...had to be
in the primitive-technology of early radio using "spark."
Spark is outlawed now, Dee.

> For example,
>one of the "hot" digital modes is PSK31. The developer drew upon personal
>experience and incorporated features derived from that mode to make a robust
>digital mode.

More sinning-by-omission, Dee. Peter Martinez, G3PLX, innovated
PSK31. Using the available Information Theory rules he knew
about, derived from commercial and military technology. It was
field-tested for years in Europe by many amateurs there before
it got any publicity over here. "Hot" is over a decade OLD,
Dee. In 1974 Peter was doing great things with polyphase
networks for voice SSB...it was written up in RSGB's member-
ship magazine. I doubt the ARRL bothered with publicizing it.

>2. Because it is not "book learning", too many people will avoid it since
>it is different than the type of learning they are accustomed to. They will
>falsely think it is hard when in reality it is different. Requiring them to
>learn it gets them over that resistance hump.

So...morsemanship really IS a barrier. You admit it.

>3. Each and every mode has its strong points and weak points. Each of us
>that participate in ham radio should attempt to gain personal experience in
>those modes so that we know by that personal experience what those strengths
>and weaknesses are.

Oh my, there we go on the lecture circuit again.

Dee, I started out working as an Illustrator. That's an artist
who draws/paints things as they really are. I have an aptitude
for that. It is as natural to me to draw, fairly well I might
add, as a physically-endowed athlete is to sports or another
with a musical aptitude is to playing an instrument. The ability
to "advance" in manual morse code skill is NOT a "natural" one
but an aptitude in only a few of us. The US military even
tested for that aptitude in all recruits of the 1940s and
1950s. [I got okay marks in that, by the way...:-)]

The first radio operators used manual morse code. First, it was
fine for the primitive state of the art. Second, it was a mature
mode in the wireline communications, a technology even more
primitive than radio of that time. Telegraphers weren't taken
off the street...they either had the aptitude or they didn't.
Once "radio" got going, the telegraphers (downsized from
wireline comms by those new-fangled teleprinter thingies) made
much of their "abilities" using on-off-keying manual morse. The
Morse Mythos was born and grew like wildfire. Good, good
newsprint copy!

But, as time progressed there came NEW modes, much faster and
more accurate, without need of morse specialists at each end
of a circuit. The radio telegraphers were downsized. They
retired and turned to amateur radio of pre-WW2 times. Morse
was still king of the modes and ARRL (by the 1930s) was

hailing the king as the "best" for all amateurs. None of this newfangled thing called "voice" for them although they did pay lip-service to it. By 1940 the ARRL was King of the membership organizations (through their publications) and they maintained that morsemanship was the epitome of amateur comms. They kept that up after WW2 and on into the single-channel SSB start in the 1950s...again paying lip-service to this newfangled SSB. And you know what? ARRL is STILL trying to promote morsemanship even if sinning-by omission once more.

Back before WRC-03 (that's over three years ago) the IARU took a position that the amateur radio license tests for morse ability was NOT mandatory...make it an option for each administration. Lots of folks went along with that, but NOT the ARRL. League was almost vehement in opposition. OK, the ITU-R amateur radio regulations were CHANGED, going along the lines of the IARU position. [that's the International Amateur Radio Union, Dee] Ah, but NOW the ARRL takes a neutral position, won't go either way...they just say that all amateurs must obey the law...but they lobbied last year to keep SOME manual morse testing for the under-30-MHz privileges. 92 years after being formed, the ARRL just can't give up and change to what OTHER folks want...

>If you are interested, I could construct various scenarios where mode X is
>the best mode.

"X-Files" was cancelled, Dee. [cousin Gillian got a vacation]

>However, unless you specifically want to know, I won't
>clutter up the newsgroup at this time with discussions that have been
>repeated many times by many people already.

Please, go on, Dee. I want to hear from your vast experience in radio and all your guru-like knowledge of what is "best" for radio amateurs. Especially WHY everyone has to emulate the olde-tyme amateur days, the ones before you were born.

>LenAnderson, You have obviously made an INVESTMENT in your
>technical profession.

Yes, I have. Not only has it been intellectually rewarding,
it was also monetarily rewarding...for the last 54 years.

>Make one in your participation in the radio service!!

Kiss my yes, "Dave," I've "participated" in numerous radio
SERVICES of USA civil radio and in DoD contract work from
below LF to Ku-Band. In these previous 54 years I've
communicated from land, from the air, from the ocean
surface...even once "worked" a station ON the moon. Never
once in 53 years was I EVER required to either use or know
on-off-keying manual radiotelegraphy.

>Amateur Radio is a SERVICE!!! If you only think of it as a hobby your
thinking
>is flawed.

"Dave," you are SO FLAWED that you can't think straight.
Here's the real story:

Go to the FULL Title 47, C.F.R., and LOOK at ALL the radio
SERVICES. The word "service" used in Title 47 is a
regulatory term denoting a type and kind of radio activity
being regulated under a Part. Go write the FCC if you
don't believe that. But, you won't believe that since you
are obviously stuck in some kind of "patriotic" pipe-dream
where you think a HOBBY activity is some kind of "national
service."

Look in Part 95, the Personal Radio SERVICES. In there you
will find the Citizens Band Radio SERVICE and the Radio-
Control Radio SERVICE. Those are all SERVICES, "Dave."

There is NOTHING wrong with having a HOBBY. It's a fine
hobby in fact. What is wrong, seriously wrong, with your
(observable) thinking is that US amateur radio is some
kind of quasi-military "national need" that is somehow
"important to the national welfare." It isn't. Amateur
radio is about as "vital to the nation" as CB or some

model airplane flyers on one of the 72 MHz channels.

Yes, HAMS get neat certificates from the federal government (suitable for framing) and like to go around saying "they are 'authorized' by the feds" as if that were some Nobel-laureate accomplishment. It isn't. The FCC is tasked with regulating and mitigating ALL United States civil radio. Since amateur radio transmitters emit RF that requires the FCC to regulate it. The FCC, or rather its predecessors (before 1934), decided that licensing was a way of doing that regulation. To get that license required taking a test. That TEST was never, ever any sort of academic achievement thing (FCC was never chartered to be an academic institution), just something to satisfy the FCC that a license applicant was sufficiently knowledgeable to get that license. Note: Satisfed the FCC...not the ARRL, NOT the nebulous "ham community" or even any "Hams in da Hood."

Have you got that straight yet, "Dave?" Did you take some kind of oath of "service" on getting your amateur license? Raise the right hand and repeat after whoever was prompting you on the oath? No? I didn't think so.

I took a REAL oath on 13 March 1952, "Dave," entering the United States Army. A Real SERVICE, "Dave." I did my "eight" and got an Honorable Discharge. From February 1953 to end of January 1956 I worked HF comms in Big Time radio. You can even download a photo essay of that from this link:

http://sujan.hallikainen.org/BroadcastHistory/uploads/My3Years.pdf

It's 6 MB and will take about 19 minutes download over a POTS dial-up connection. If you look closely at those 20 pages you won't find a single thing about "working CW" (on-off-keying manual telegraphy) yet the whole station ran 24/7 pushing about 220K messages a month. It would be IMPOSSIBLE to send that many (some of which were encrypted) by manual telegraphy unless the signal battalion was doubled. It didn't have to be because the messages got through and on-time. That was 53 to 51 years ago, "Dave."

What do you think the military uses NOW for communications? Data, "Dave," Data. High-speed data, "Dave," not some dinky 1200 baud amateur stuff. DIGITAL. Digital can be on-line encrypted and on-line decrypted securely.

You show me where the REAL Services use manual radiotelegraphy, "Dave." They don't. It is voice and/or data, most of it in the field done DIGITALLY.

>/s/ Dave, BSEE, Program Chief Engineer-retired, LGM-118A(RS), MK21/W87

WTF, "Dave?" So, you tacked on a bunch of undescribed acronym things supposedly project numbers or IDs. Are we to be "impressed?" I'm not. I've worked alongside and for PhDs who didn't bother with IMAGE and all that rank-status-title BS... WE got the job done, working together.

Amateur radio MIGHT get something done working together. But, you olde-tymers won't. You have to RULE, holding fast to the traditions of 50 to 70 years ago...because YOU and all the olde-tymers had to do it so everyone else has to...and all you olde-tymer morsemen think that "CW" is somehow "best." It isn't "best." If you really have a BSEE instead of just PR BS about morsemanship, you would realize that.

><http://www.strategic-air-command.com/missiles/Peacekeeper/Peacekeeper...>

"Dave," amateur radio isn't about missles. Save your energy for donating DVDs of "Strategic Air Command" (starring Jimmy Stewart) to give to impressionable youngsters.

I've been in the smoke-and-fire trade of rocket engines for a little while (Rocketdyne Division of Rockwell International). Trust me, rocket engines do NOT use manual radiotelegraphy. BTW, SAC is GONE, "Dave." A whole reorganization in the USAF some time ago. No more "oil burner routes" or flying out to loiter near the USSR (the USSR is gone, too). BTW, there were SSB transmitters emitting 12 KHz wide RF long before SAC got the single-channel SSB stuff to use on such loitering. I know, having to keep a few of those REAL SSB transmitters running correctly.

Now, "Dave," I can't fault on-off-keying CW any. The key fob for our 2005 Malibu MAXX uses that. Yes, the last vestige of high-speed CW (REAL CW) done digitally. Done by the hundreds of thousands all over the country daily. Nearly all of them operated by unlicensed NON-MORSE-TESTED civilians! That Chebbie got in our garage courtesy of "investments," "Dave." Investments in REAL work, not playing like big-time 1930s radio ops "jobs" of a long-past age by AMATEURS.

Beep, beep,

Please, go on, Dee. I want to hear from your vast experience in radio and all your guru-like knowledge of what is "best" for radio amateurs. Especially WHY everyone has to emulate the olde-tyme amateur days, the ones before you were born.

Beep, beep,

LenAnderson@ieee.org
Life Member, IEEE

>
Wow! It took you so long to say so little, Len!
Why not simply toss the "personal experience" gauntlet directly into her chops and challenge Dee to a battle of the electronic wits at sunrise? I'm sure it will do wonders for your machismo and, if it makes you feel that you succeeded in one-upmanshit, perhaps you can even send her to her corner, crying for mercy.
Go ahead, Len. Dazzle her with your brilliance and browbeat her if you can.
There...don't you feel better already? Was the relief good for you? Feel vindicated?

I think he meant that someone was going to fly over him and shit on him like
a pigeon.
My favorite part is where Mark says "stroll for flame". Does that mean he is
a prostitute that gets paid in insults?

Your rudeness is clearly expressed in your one word response [above].

A more appropriate response, carrying the same meaning, but suitable for an open list, would be 'bovine defacation'!

No wonder Ham Radio is going the way of CB with people who express themselves so poorly and are unwilling to work for something they value.

Where your treasure is ... there your heart is!

Dave, he can't help it, his education is "limited" and doesn't know any
better - due to NO EFFORT - effort as he said was bull shit too. So you
can't expect much out of someone who has apparently made effort - to do
something.

Mork the dork - The man is right - IT IS AN INVESTMENT - OR shall we assume
your radios were given to you by the welfare office, paid for by pan
handling on the street, or some other way which YOU didn't have to pay for
them? ALSO - to get involved in such a hobby - ANY hobby - YOU MAKE AN
INVESTMENT in time and well - whatever to enjoy it. We won't go with effort
since it too is bull shit.

L.

Dave Said:

>I'll say it again ... INVESTMENT!!

>If an activity is to have value it must have INVESTMENT.

Hi Dave,

Thanks for the replies, I surely didn't mean to get a flamewar going, but, it seems there are some very
strong views on this.

I don't mind putting an investment into something...usually when I learn something new, I research and get
into it 110%. The trouble with the requirements and all there that I see is, that it puts up a very high
initial investment before you can actually get in and do anything with it. I guess I question, well how do I
know it will be worth all the time invested before I even get to 'play'?

In my case, and I'm sure many others out there in this day in age, my TIME is what is of such short supply. I
have no problem laying out cash for equipment...with most things I do, I generally jump in with both feet,
buy equipment and 'learn as I go'. I'd like to do the same with ham and other radio technologies, but, in
this case, I find a large wall in front of me of study and test taking, before I even get to jump on the air
even once to see how much I'd like it.

Does that make sense to you?

Thanks for the replies,

noonespecial

Rudeness is always a proper response to rudeness

telling someone how they must value thing is the hight of rudeness

Hi Lloyd,

Thanks for the reply. Can you explain what SSB is to me, or post some informative links? I've seen ssb
(single side band?) in the same breath/post as some CB radios. I'm not sure what it is, or what special
equipment it takes. About all the info I can google points to radio communications at sea.

Can you use this on land? License and equipment requirements?

Thanks in advance for any info or pointers, I'm trying to learn about all this differences in publicly
accessible radio.

Example.

A few months ago a group of ham radio operators went into the central Pacific Ocean to an island named Swain's Island [ATOLL]. Swain's Island had just been approved by the Ham radio Certificate Powers {American Radio relay League] as a separate DX [distance] entity and as such it qualifies as an entry into the various DX awards [DXCC being the prime award}. [DXCC means you have submitted written proof of confirmed contacts with other ham radio operators in 100 or more other countries [or entities].

The Hams operated from this rare location for about a week and then returned home. There is no-one there today!

Let me digress into another of your questions: i.e. What is SSB?

Fifty years ago ham radio, and still today the AM broadcast band, transmitted three components to put a signal on the air. First, was the carrier that set the dial frequency e.g. 3950 KHz. The carrier contains NO information, it just sets the dial frequency. Then voice audio was added to the carrier. This addition [modulation] produced two audio signals around the carrier. One above the carrier, the other below the carrier. So, the resulting signal had the carrier and one upper side band and one lower sideband. The carrier contained 2X the power of the audio. And the audio was redundant with 1/2 the audio power in each sideband. The resulting signal can be described as Double Sideband Plus Carrier.

In the 50s and early 60s design techniques were incorporated to suppress the carrier, which contained NO information; and to eliminate one of the redundant sidebands. The resulting signal is Single Sideband [one audio channel] with suppressed carrier. [SSB = Single Side Band]

I'd definitely go with the Uniden BCT15 for analog or the BCT996D (I think that's where they put the D - at the end) for digital. What he needs depends on the signals he wants. Go to <http://www.radioreference.com/modules.php?name=RR> and look around. If the mode for what he wants is D, he needs digital, otherwise an analog scanner will do. Both of them track trunked systems, so he can follow the DC PD (and FD) systems, and they cover all currently used frequencies.

>and code requirements do for you besides build up boundries to doing something new and fun?

You might ask that about anything. Given that <insert group here>
like myself are stretched for time, what do all the requirements for
<insert something here> do for anyone?

>I'm in a pretty technical field, and I study to keep up in that field everyday, the last thing I want to do,
>is have to spend my weekends studying to talk on a radio.

So don't. Buy a CB, FRS or GMRS radio and talk all you like. Those
are the services created for folks who just want to talk on the radio.

>If less stringent requirements were there, I could
>easily afford the tools of the trade, and would like to just jump in and start working with a ham setup. I'm
>particularly interested in exploring the amateur radio/computer connections.

You won't like that - you'll have to devote a lot of your precious
time to learning things - electronics, both theoretical and practical,
programming, reading a waterfall display, keeping your signal
distortion-free ...

You can't just plug a radio into a computer and start using them.
Digital communications doesn't work if you do it that way.

>Can you give me valid reasons as to what useful purpose in today's age they serve?

No, since someone who wants instant gratification can't be bothered to
listen to why that's the wrong way to do something. Your time is

probably much to valuable to spend it learning enough to understand why you can't learn enough in an instant.

Go memorize some test answers, get a code-free tech, hook your computer up to your radio and, in 6 months, you'll have your radio up for sale on eBay, because "it doesn't really work".

Bummer.. well, there's a bunch of ways to test, flashing lights and other
ways. If dyslexia is a problem, just have to get someone to read off the
dit-dah sequences while you memorize them, or use a recorded audio lesson.
There's always a way!
gud luck,
rb

A GMRS license costs money. A ham license costs study (time). Your
choice. Either one lets you "talk on the radio".

It's a mode, like CW or FM. It's actually AM, with the carrier and
one sideband chopped off (or never generated). No whistles, the same
transmitter can handle more power, it punches through noise and
interference better and, if you have a quadrature detector (sorry,
Usenet isn't large enough to explain that in a post - you'll have to
learn a little engineering), it's almost as good, for getting through,
as digital or CW.

You can use it anywhere you can use AM (as far as ham and CB
frequencies are concerned, anyway). Same license as any AM voice mode
for the frequency. SSB transmitter. Receiver has to at least have a
beat oscillator (BFO), but a SSB receiver is better.

then there is the problem of getting the VE to even discuss acomdation
where I lived before they would not speak to me with a Doctor (md)
dispite the fact the PHD's and MSW tend to dianose Dyslexia, then they
want seris of test result and your medical records truned over the the
ARRL all fo them for evaluation by NON medial people indeed we saw
last year our own Steve Robeson making fun of the facts I was looking
for the min osrt of testing that an MD could prescribe to dianose
dyslexia

he has tormented me ever since for daring to try accomation

there indeed was a way but I was too honest to take since I got to the
point where in some sessions I could sending, other session receiving,
it was offered long ago when I was first trying that someone would
simply scamble 2 session together and say I passed them both on the
same day instead of 2 weeks apart as was realy case (btw getting to
the stage where passing iether way was 1 in 4 coccourance took 4 years
working 35 minute 5 day per week, and suffering through spliting
headaches. It might be possible now but it aint worth it the FCC will
act soon enough

Here's another:

""SOMALIA, THE BLACK HOLE OF ANARCHY

BY AHMED Q. BURSALIID

In mid July 2005 The U.S. intelligence agents, working with local warlords, have carried out counter terrorist operations to seize sus�pects. "Somalia remains the theatre for a shadowy confrontation involving local Ji�hadis, foreign Al Qaeda operatives and in�telligence services from a number of re�gional and Western countries," says a report by the International Crisis Group in 2005. The report says the "dirty war be�tween terrorists and counter-terrorist oper�atives in Mogadishu appears to have en�tered a new and more vicious stage that threatens to push the country further towards Jihadism and extremist violence un�less its root causes are properly addressed."

The Somali transitional federal government was formed in neighbouring Kenya in 2004 and moved into Somalia June 2005. However, the administration has failed to relocate to Mogadishu, the Somali capital, because the city was considered unsafe. Due to the insecurity of Mogadishu, the TFG relocated to Jawhar, which it later decided to move to Baidoa.

Warlords and leaders of Islamic courts have been fighting in Mogadishu for about five months. This led to the loss of hundreds of civilians and
destruction of properties. Somalia, which had been in a state of anarchy
for more than a decade, has once again gone to war; this war was somehow
different from previous ones. The nature of this war is seen to have some religious and political clash while previous ones were much related
to tribal and feudal conflicts. Each one of the conflicting parties is claiming that the other group is related to Al-Qaeda when the reality is
somehow different from that. After months of armed conflicts within the capital city of Somalia, Union of Islamic Courts took the lead with enormous points by eliminating the warlords who took hostage the country
and its people for 16 years.

United States of America, which earlier denied any allegation of helping
or giving hand to the warlords in the fight to weed out the Islamic Militia in Somalia shortly after the takeover admitted that it had been supporting warlords to destabilise the Islamic militia. America has been
an active player in the politics of Somalia, and until now its policy towards restoring peace and stability in the war -torn Somalia is somehow obscure.

Somalis believe that it is the right time to take advantage to restore the lost hope of good governance in the country as Union of Islamic Courts led by Sheikh Sharif imposed law and order on Mogadishu, which was seen neither for 16 years. Hundreds of families from overseas

countries returned back to Mogadishu, the capital city of Somalia since the takeover took place.

At first Transitional Federal Government welcomed the political change, which took place in Mogadishu as the Union of Islamic Courts disarmed a pack of US-backed warlords that took the country and its people hostage for more than a decade. But soon after the Islamic Militia started to capture some other cities, the TFG warned the Union of Islamic Courts of
capturing farther cities. A big gap of political misunderstanding came in between the Transitional Federal Government and the Union of Islamic Courts, after the president of fragile Transitional Federal Government requested peacekeeping forces from the African Union. As the new Somali constitution inked in Kenya says, "Peacekeeping forces should not come from the neighbouring countries (Ethiopia, Kenya and Djibouti)". Likewise, the parliament passed a motion, which it was requesting peacekeeping troops to Somalia without paying attention to the classification of peacekeeping forces from AU countries and of front
line countries. This has created an escalation of political crisis in Somalia. Ethiopia, which is the common enemy of Somalia has sent its troops to Somalia in an attempt to protect the Transitional Federal Government.

This time, Arab League took the political platform of Somalia to mediate
the two conflicting parties. TFG and UIC were invited to attend a mediation conference held on June 2006 in Sudan to settle their differences. After a reconciliation conference, presided over by Sudanese president Omar Hassan Albashir, the current chairman of Arab League, the reconciliation process derailed with unknown reasons but it is believed that Ethiopia was the main figure, which made the reconciliation process fail as the outcome of the meeting could not meet
the criteria of Ethiopia's plan to Somalia and then, President Abdullahi Yusuf Ahmed, a well-known pro-Ethiopian warlord and his loyal prime minister Ali Mohamed Gedi, a vet scientist started to advocate the
legality of Ethiopian Army presence in Somalia.

The Somalis are of the opinion that the involvement of Ethiopian Army in
the peacekeeping operations in Somalia could cause havoc and deterioration of the political condition of the country in any case as Ethiopia is an old aged enemy of Somalia in East Africa. While a vast majority of the Somali public strongly opposed to deployment of Ethiopian troop into Somalia under any pretext, president Yusuf's political stance towards the deployment of Ethiopian troops in Somalia is clear and also in action by denying the presence of Ethiopian troops in Somalia just to protect his presidential seat.

Since the reconciliation conference in Sudan derailed a number of ministers resigned due to the political misunderstanding between TFG and
UIC. Prime minister declared that he would be nominating successors of the resigned 24 ministers. In addition to that, the prime minister himself survived after the Somali parliament passed a motion of no confidence against him recently.

Moreover, Prime minister of Ethiopia Milez zanawi whose government earlier denied any presence of Ethiopian troops in Somalia told BBC that
his government has sent troops to Somalia to protect the Transitional Federal Government from the Union of Islamic Courts. While on the other hand, Eritrea is also believed to be an active supporter for the Union of Islamic Courts. Somalis believe that the support from both Ethiopia and Eritrea respectively is much related to a proxy war in between them.
US government warned Ethiopia and Eritrea stop the proxy war they are playing in the Somali territory.

The choice is a bit more than local/mail order. You should really
compare the 96/396 or 2096/996 feature by feature to see which one
best suits your needs.

The carrier is just there for setting a dial frequency? How about if
one just transmitted ONE component, the carrier and then turned it on
and off and regular intervals. It might be possible to use the on/off
pulses to convey information, huh?

> In the 50s and early 60s design techniques were incorporated to suppress

Those "design techniques" were used as early as about 1927.

Where is all this going?

Dave K8MN

The time investment is not as much as it seems. That is even more true of
someone who has experience in related fields or has experience in the art of
studying. For those with some existing experience in related fields, they
can often read up enough in a single weekend to pass the Technician written.
This will let you get your feet wet in the VHF/UHF and higher frequencies.
There's quite a lot that can be done in this area if you invest in the

equipment.

Again if you have some related background, the General written is not particularly time consuming to study for either. The code is only as hard as you make it by fighting yourself. If you decide that you will learn it, the average person only needs about 30 hours to get to 5wpm, assuming that a good training method is used.

Getting the General license gives you all modes and all bands and the maximum power privileges. The only thing you do not get are some subsections on some of the bands that are reserved for Extra licensees.

Now the Extra test is quite a bit more difficult but is not required unless you want to get into those subsections mentioned above.

You spoke of "learning as you go". Basically ham radio is the same. Even the Extra class license has only scratched the surface of all that might be involved in amateur radio. The tests & licensing are to insure that you know enough not to get hurt, not to cause harm to other people, and not to make a mess on the bands. Also they are to insure that you have a grounding in the basics so you don't go spinning your wheels trying to get things working.

You might ask why this is important. Let's just address the safety area for a moment. Well for example, you can actually get a burn from grabbing an antenna that is being used to transmit. If you get into microwave transmissions, you could fry your eyes (or somebody else's) if you look into the end of a wave guide while it's being used to transmit. You can get electrical shocks from feedback due to a poorly set up station. This is just a small sample of some of the things that you should be familiar with.

Dee D. Flint, N8UZE

the investment s not the same for different folks it can't be so the
e;lcetircal engineer less of a ham for making a lessor investment?
that is the clear inplacation

indeed you have implied that My Wife is a more cabble member of the
Tech the class because she had to wrok MUCH harder than me to get that
license

This is some of the very information that you will learn in studying for a
license but here's the nickel tour.

An AM signal (like the radio stations use) has a center carrier frequency.
This is modulated by the information (voice, music, etc). The result of
this modulation is that two sidebands develop that are identical but are
mirrored about the carrier frequency. All the information is carried in the
side bands and both sidebands carry the same information. So the smart boys
got to thinking and asked why do they actually need to transmit both
sidebands (since they contain the same information) and why do they need to
transmit the center carrier (which contains no information). They developed
a way to eliminate the carrier and one of the side bands on the transmit end
and a method to receive and convert it to useful sound at the receive end.
This is called (ta-dah) Single Side Band. The main advantage of SSB over AM
is that the transmitted signal is much narrower so more stations can fit in
the same band width. An additional benefit is that because the signal is
narrower, you can use a narrower filter and so reduce the amount of
background noise receive with the signal. Since the carrier and one side

band are eliminated before the signal power is boosted for transmission, you also end up with a stronger signal because the power is, in essence, focused on boosting a much narrower signal. For example, my radio gives me 100 watts out on SSB but only 25 watts out on AM.

Amateur radio operators use SSB as the commonest voice mode on HF (shortwave communications). Some hobbyists do use AM from time to time partly because they enjoy it and partly because of its historical significance. There is also SSB activity (as well as some AM) in the VHF and higher frequencies. Basically, in the amateur bands, it is legal anywhere that voice communications are legal. However in VHF and higher frequencies, there are band plans that one should follow on where to use SSB.

As far as equipment goes, you've got to read the specs. Some CBs (an unlicensed radio service) have SSB as well as AM. For amateur radio (a licensed service) HF voice transceivers, SSB is normally the standard mode with AM being an option that is available in most radios.

I suggest that everyone that the AUKk00ks have been chasing (yes, group mission k00k posters are real, Alice) join me in alt.usenet.kooks and help me trash the place. WE can have our own elections, chase the k00ks that are chasing kooks around, watch them try and avoid our rocking chairs with their tails, it will be entertaining.

DX simply means distance. If you are talking about HF transmissions, it
normally refers to countries outside your own. If you are talking about VHF
and higher, it can be within your own country but at distances beyond line
of site communications.

The "DX community" is simply a term that refers collectively to those who
are particularly interested and involved in the longer distance radio
contacts.

I would like to add that DXing isn't limited to chasing awards. Some people
just like to find someone in a foreign country to ragchew with. One day I
was lucky enough to come across a gentleman in Italy who simply wanted to
talk not run a pileup. We spent about 1/2 an hour just chatting.

>>>>>Eliminating a requirement is dumbing things down. But no one would
>>>>expect you to be able to understand that.
>>
>>
>> Well, let me ask, from the point of view of a potential noob to the hobby. What use is
the code requirements?
>
>The 'use' is something you just can't understand. The 'use' is a commitment of
>time and talent which adds value to the license. The 'use' is investment.

The term "investment" is very misleading. To explain my position, I am
in agreement that CW testing should go the way of the dinosaurs. I
have no problem with technical testing, as a way to ensure that
potential Hams can operate their radios properly, without causing
interference with neighbors and other Hams world wide. There is also a
safety factor, with transmitters that can kick out a LOT of
potentially dangerous power. So, technical exam = good idea.
Here in Canada, CW is not required IF you achieve at least 80% on your
technical exam. You need at least 55% WITH CW.
http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/sf08435e.html
This seems fair, to me.

As for the "investment", not all investments are valuable. I invested
years of training to be a fully qualified mechanic. There is
considerable value in that investment, obviously, as it is my bread
and butter.

But, would my investment be more valuable if, for example, if an
additional year of carpentry training were required for me to be
certified? I mean, after all, cars had wood frames and bodies at one
time so a mechanic would have needed carpentry skills...back in the
1930's. Such an investment would be a bad one. The skills would have
no value and do nothing to enhance my skills as a mechanic. The extra
investment would have no return with regards to being a mechanic.

Carpentry would not make me a better mechanic and would not prove to
the world that I really wanted to be a mechanic.

CW is as useful to todays Hams as carpentry is to a mechanic. A good
thing to learn, and potentially useful, but should not be a barrier.

But then again, a mechanic *might* need to do urgent bodywork on an
1930's wood-bodied ambulance and therefore save somebodys life. ;-)
{hehe...sorry..just had to pour on more coal..}
Just about as likely a scenario as CW being the only way to save a
life.

But then, if I were stranded on a desert island and found some old war
time aircraft wreckage, I could modify a magneto to be a spark
generator and spark out an S.O.S. My mechanical skills help me there.

Well......could happen!!

Perhaps if RS didn't sell so much redundant Sprint Telephones, overpriced
DVD players and TV's and their UTTERLY USELESS junk toys that
start to appear each Labor Day and multiply right up till Xmas, their sales
would rise. Personally however I would not miss them if each and every
RS were to close and the company was to go the way of FW Woolworth.
Most of the stuff you can get at RS you can usually get at Walmart for
50% less price anyway, plus Walmart employees are usually a tad more
intellegent than your average Radio Shack stooge.

I'm not sure I recall all the other posters idea of investment - but
"mine" - was referring to the time/cost how ever little - "spent" or
"Invested" - if you will - in the way of time to study or prepare for the
exam - acquire equipment AND to actually go on the air to make use of it.
So - yes it "can" be looked as an investment - even if in a "minimal" sense
of the word.

IN the way I "think" you're referring to - as an investment towards a
"rewarding career" or leap forward into life - eh - depends on the person.
Many do NOT make electronics their lifes work. BUT, many have started from
ham (some from CB and then ham) and went on into some electronics or
electrical field. So for "them" - it "was" an investment of sorts - into
their future.

Just like another part of this thread where "memory and memorization" was
being used, hacked, slanged - the word "investment" could also go that
direction. It is all in how you want to look at it and perceive it.

Just my 2 cents!

If this is true, it isn't so surprising - a few stores have closed locally. Many are not as busy as they once were and I suspect "might" be going the same way in the near future. "SOME" things are still able to be gotten there that Wal-Mart doesn't supply - BUT - then again - those are the things which "experimenters", "builders", "technicians", "radio enthusiasts" would buy. ALL ELSE - is "Wal-Mart" related type items. Heck - even "Wal-Mart" sells phone plans now for at least a couple companies but they don't hound you when walking in the door to buy one. "IF" Wal-Mart sold "ALL" items that RS handled and "Cheaper" - yeah, I think RS would go DOWN.

Lets not give Wal-Mart TOO much credit here - I hear they're not doing so well all the sudden - either. The local store - ranked one of the top sellers in the nation - parking lot and aisles always full of shoppers, bringing in "millions" a day (data acquired from a good source) - is laying off people, cutting back hours, freezing pay raises, etc. AND I hear that is a trend across the nation in "Wal-Mart". So - even that giant may be coming to it's knees. My question on this issue, is I wonder if it has anything even remotely related to do with the "mexican" hiring policies they were busted on? A retaliation of having to pay "higher" wages to Americans - or shall we say "Legal" residents? They closed a store down in Canada when the people there wanted to form a "union" - so I heard in a news column. Sure makes you wonder. Its amazing what the holder of the wallet can do!

It is interesting (in a sad way) to see these big companies going belly up or at least having woes..... It makes you wonder where we are actually headed. HERE - Wal-Marts ARE one of the biggest employers. If they go out - the unemployment rate will be higher than George Bush Jr. can count. Almost as high as his deficit.
I know Wal-Marts and yes some others too - already gone by the way side - have been accused of killing off the Mom and Pop stores, but the whole picture just plain SUCKS.

I guess the adage applies - it IS a "Dog eat dog" world out there.

Hey, "Dave," since when does the FCC mandate all hams MUST
"work DX?" [try to remember that "the DX community" does NOT
issue/grant/authorize amateur radio licenses, only the FCC]

"Working DX on HF with CW" is an OPTION, not a requirement.

In fact, the FCC doesn't even mandate 'working' a foreign
radio amateur at all. ['foreign' meaning any country outside
USA jurisdiction]

>It's your choice: if you want to play the DX game learn the rules including 25
>wpm CW.

"Dave," you really need to be reminded that the FCC does NOT
mandate/require/encourage ANY "DX contacts." Neither does the
"DX community" grant any licenses OR make any "rules" that ALL
US radio amateurs must follow.

Oh, and "Dave," the REAL US amateur radio regulations require
passing a FIVE WORD PER MINUTE (equivalent) manual telegraphy
test (15 words per minute with the "farnesworth" approved
equivalent rate), not "twenty-five words per minute."

"Dave," have you been licensed a long time? I don't recall ANY FCC requlations requiring a "twenty-five" rating, only the OLD regulation (prior to mid-2000) and that only for Extra class. I'd say you really ought to review the latest rules that apply in this new millennium. You can review those for free at the United States Government Printing Office website under "Code of Federal Regulations." You can also get it at the ARRL website since the ARRL seems to think they are the only "official" source for everything amateur...

>If you want to operate an appliance, but an appliance.

You mean EVERYONE "following the rules of the DX Community" uses homebuilt radios? All have built their own keys so that they don't use appliance keys? Amazing...

How does anyone "but an appliance?" :-)

Beep, beep,

["Dave" is a suspect banker in the investment trade?]

>The time investment is not as much as it seems.

Dee, the "time investment" for MORSEMANSHIP depends entirely
on the psycho-acoustical aptitudes of the learner. "Learning"
a psycho-acoustic skill is NOT an intellectual one, it is a
physical one.

>That is even more true of
>someone who has experience in related fields or has experience in the art of
>studying. For those with some existing experience in related fields, they
>can often read up enough in a single weekend to pass the Technician written.

You morsepersons need to get a common story. The rabid morsemen
keep saying it is all "memorization," taking no skill whatsoever.

>This will let you get your feet wet in the VHF/UHF and higher frequencies.
>There's quite a lot that can be done in this area if you invest in the
>equipment.

Come right out and say it...you morsepersons consider the
frequency world above 30 MHz to be beneath you, a place for
kids and lids (and probably space cadets) to go and PLAY.

>Again if you have some related background, the General written is not
>particularly time consuming to study for either.

Everyone can just "memorize" the answers, right? :-)

>The code is only as hard
>as you make it by fighting yourself. If you decide that you will learn it,
>the average person only needs about 30 hours to get to 5wpm, assuming that a
>good training method is used.

The ARRL VEC uses the "farnesworth" method which send at FIFTEEN
words per minute...even though the FCC regulations have five.

Dee, you haven't addressed the subject of the existance of the
manual morse code test itself. You (erroneously) think that it
is "necessary," possibly because you had to take that test.

>Getting the General license gives you all modes and all bands and the
>maximum power privileges. The only thing you do not get are some
>subsections on some of the bands that are reserved for Extra licensees.
>
>Now the Extra test is quite a bit more difficult but is not required unless
>you want to get into those subsections mentioned above.

Extra class are the "elite." Having an extra license allows all
the preening and self-righteous attitudes possible in a hobby
activity. It is personally rewarding to elitist-wannabes who
have to be "better than ordinary persons."

>You spoke of "learning as you go". Basically ham radio is the same. Even
>the Extra class license has only scratched the surface of all that might be
>involved in amateur radio.

Really? All those extras in here seem to think they are FAR
better than any professionals in radio...because they had to
test for morsemanship.

>The tests & licensing are to insure that you
>know enough not to get hurt, not to cause harm to other people, and not to
>make a mess on the bands. Also they are to insure that you have a grounding
>in the basics so you don't go spinning your wheels trying to get things
>working.

Golleee! All along I thought the FCC just regulated (and
mitigated interference) in ALL US civil radio. Their
predecessor agencies (before 1934) used Licensing and Testing
for same as a REGULATORY tool. I didn't know that those were
also academic tests and diplomas...

>You might ask why this is important.

Why IS morsemanship so important?

> Let's just address the safety area for a moment.

FCC amateur radio regulations cover only the radiated
RF power field. As a safety issue for ALL affected by
that RF field. Does YOUR station obey the federal
regulations?

>Well for example, you can actually get a burn from grabbing an
>antenna that is being used to transmit.

Why would anyone do that? [anything in official rules on that?]

>If you get into microwave
>transmissions, you could fry your eyes (or somebody else's) if you look into
>the end of a wave guide while it's being used to transmit.

Why would anyone do that? You can get far worse damage to the
eyes looking into a laser beam of much less power...and you
don't need any license for that.

>You can get
>electrical shocks from feedback due to a poorly set up station. This is
>just a small sample of some of the things that you should be familiar with.

Those aren't covered in FCC regulations, are they?

"Feedback gives one shocks?" I suppose...I've made feedback
networks for years and never been "electrically shocked" by
them. Delighted and surprised that they worked so well,
perhaps, but never got any electrical shocks from feedback.
I guess I'm just not "amateur" enough...hi hi :-)

>suppressed carrier. [SSB = Single Side Band]

"Dave," your knowledge of Single Sideband is ferklempt.

The spectra of an amplitude modulated signal was mathematically
described by John R. Carson of AT&T before the 1920s. SSB,
including suppressed carrier, was USED by the telephone
infrastructure in the 1920s for long-distance lines. The most
common system, "C Carrier," had four separate 3 KHz voice
channels and would operate on the open-wire telephone lines
then common all over the world. This "C Carrier" was directly
adapted to HF radio in the early 1930s, the frequency-multiplexed
total signal converted to HF and amplified. The first HF SSB
radio link was put into service between the Netherlands and the
Netherlands Antilles carrying four voice channels or (to become
the later commercial-military standard of two voice and six to
eight TTY channels). While single-channel SSB was experimented
with before WW2, it didn't expand until after WW2 and a number
of US military contracts awarded to then-prominent radio makers
(Collins, RCA as two examples). Based on that success, the
amateurs took it up in the 1950s while the ARRL promoted the
false idea that "SSB was pioneered by radio amateurs."

Technically, your statement was faulty. Each "sideband" (the
spectra adjacent to the carrier) carries ONE QUARTER of the
total RF power output of single-channel SSB, not "half" in
normal AM. In normal AM the carrier is always constant in

amplitude. In normal AM receivers the "detector" stage is a mixer, combining the carrier with the two sideband spectra with the output lowpass filtered to yield the original audio signal. Single-channel SSB usually suppresses the carrier (almost to extinction) and the "detector" stage being fed an equivalent constant-amplitude carrier signal from an internal receiver oscillator. The mix products of carrier re-insertion and the input single sideband spectra yield the original audio modulation after lowpass filtering.

The important thing about single-channel SSB is that a transmitter peak power output of RF need only be one-half to on-quarter of a conventional AM transmitter to yield the same demodulated audio signal level.

No morsemanship skill is necessary to use a single-channel SSB radio. Today it is being used on the open sea by both commercial and private boat/ship owners for voice communications; also data, separate or multiplexed, for written communications.

At this stage of his fraudulent claims, without ever having
presented ANY third-party references or documents or even
personal photographs, he is caught up in his own conundrum.

If Robeson comes clean and ever shows any documentation now,
he is in for tons of remarks of his past claims that he can
never weasel out of, not even with the gratuitous personal
insults he normally uses against challengers.

If Robeson continues on his fraudulent claims, then he is
only repeating his present behavior, convincing no one, and
building only his own warped fantasy. The rest of us will be
stuck with his personal blog output.

>> >Robesin got back into uniform as a Tennessee State Guard "officer" of

>
>Yikes!!!

The duties of the Tennessee STATE Guard (not affiliated with
the National Guard) were described by them as a sort of
in-Tennessee 'custodian' of NG facilities if and only if the
NG there is activated into federal service plus being a sort-of
'military police' for that state. As quasi-MPs they would have
some ability to access federal records to confirm Robeson's
military service. On the other hand, the TN STATE Guard will
(by their own statements) accept membership by civilians.

>no one has won anything.

The morsemen have been so brainwashed into believing their own
efficacy in radio that it is impossible to "win" anything,
certainly not with the ARRL publishing house constantly implying
that morsemanship is the "best" skill an amateur could have.
Amateur morsemen are so wrapped up in their personal skill that
they are unable to come to terms with any amateur or
professional radio person who doesn't care for it. To them,
US amateur radio is ALL ABOUT manual radiotelegraphy. Tsk.

>why you can't learn enough in an instant.
>
>Go memorize some test answers, get a code-free tech, hook your
>computer up to your radio and, in 6 months, you'll have your radio up
>for sale on eBay, because "it doesn't really work".

Is eBay where you sold your radios, Big Al? :-)

Hey, Big Al, have you written the QPC yet about those simple,
easy-to-memorize questions on writtens? No? Why not?

Have you written the FCC yet about the anyone-can-get-a-ham-
license and tell 'em "what for?" [it's easy to submit a
petition to get back to them good ol days you want, FCC tells
you the procedure on their website] No? Why not?

Maybe you ought to write your congressperson, then. Tell THEM
that US amateur radio testing has gone down (your imaginative)
toilet and DEMAND that something be DOME about it!

You sure are ANGRY about things, Big Al. Maybe you need some
tranquilizers or mental therapy? No, you say? Okay, then I'll
just put you down in the Cranky Old Coot category. Here, have
a Foxtrot Uniform with my best wishes... :-)

> Most of the stuff you can get at RS you can usually get at Walmart for
> 50% less price anyway,

This is a major problem at RS and what I want I can't you can't get it at
Wally World.

When I go to RS, I am usually looking for something like a BNC connector,
or some 3.7 Kohm resistors or somesuch thing.
Most of the time the employees are nice, but they don't have a clue about
what I'm asking for.
Those little drawers of parts in the back aisle are usually picked over and
half empty.
The RS employee will then look up the part you want ($2.49 for two 1/4 Watt
resistors plus $8.95 special shipping, over ten dollars for what used to be
a 49cent part and you have to wait days to get it.

>> RadioShack uses e-mail to fire employees

This is cold and Major NOT NICE! This lack of caring, of correct behavior is
what has driven RS down.

You don't want to earn radio "preledges" Mark. You're too lazy to put
forth an effort to earn them.

The CAP has a JAG? I think robesin just likes to collect suits.

I'm going to have to find an organization chart and locate the JAG's
office.

Sgt York-Robesin and Chesty Puller-Robesin. And probably Sgt Schultz-Robesin from Hogan's Heroes, and Corporal Agarn-Robesin from F-Troop.

Then there's Walter Mitty-Robesin from fiction.

> Hey! Rebolutionary! 911 operators call Him! :-)

He knows everything. But he'll never get the call.

He taught the 911 Ops that there's a dash between the digits, i.e., 9-1-1, and they can't find the dash on th{i]er dialpads, even in reverse.

Queezay and Oooday had a rape room. Don't know if Saddam participated.

Perhaps if robesin had been captured on one of his seven hostile forays behind enemy lines, we might have known the truth about Saddam.

It's not the Gay 90's anymore. But maybe before the 1st decade of the
new millenium lets out, we'll have a decision from the FCC.

I pity anyone under that flight path. They don't know the danger they
might be in.

And the CAP and American Taxpayers are liable.

I was jesting on the "JAG" part. :-) Robeson-Robesin has been on
such a jag trying to impress folks (as a fraud) that his posts have
enough material for at least two seasons of "JAG - a personal
story."

Thank you, Rick! You spoke volumes of reality in this new
millennium.

"Slow Code" is a relic of the 1930s, mentally over 70 years in the
past.

Not everybody "recycles" it like you do, Markie. Does drinking that
used enema beer taste great or is it less filling to you?

Oops! I missed it. My old three-layered killfile system (i.e. using Nfilter(NewsProxy), Xnews, & Hamster) :-) was getting so large and complicated some months ago, with so many obsolete entries etc., I cleaned house and started from scratch.

But the first entries in my new killfile are the stalkers, spammers, and the like: most of which are angry Anti-Christ Liberal "democrats", but, apparently, one of which is an angry Anti-Christ something else...

But if it really does vote Republican (only our N.S.A. & God & the psychic detectives, et al, and it [itself], know for sure -- I skip-traced it this morning, and I'm convinced it probably does), then I don't care if it believes in the tooth fairy, of if it believes in the "men-to-the-moon" fairy tale, as long as it votes Republican in all cases (J. Lieberman is a conspicuous exception to the otherwise steadfast rule, who will be re-elected with the HELP of Republicans). :-)

Enjoy!

Mark, you don't have to apologize to anyone.

If Slow Code isn't a throwback to 7 decades ago, he is one example
of a thoroughly brainwashed morseman imprinted with the Beliefs
of 70 years ago...and all the mythos of "code saves lives" that
spread like kudzu after the Titanic disaster of 1912.

So far, Robeson has NOT been convincing. He IMPLIES and ALLUDES
to things but hardly ever states anything outright and then
never with any referencible sources that anyone can access.

Robeson has tried to construct an edifice, indeed almost a
temple in which we should all venerate his mighty
accomplishments AND, at the same time, has leveled barrages
of personal insults and deragatory accusations against all
challengers. That latter action negated his mighty
constructs and established his fraud. That 'edifice' has
to be torn down...if for no other reason than being an
eyesore to us in his field of dreams.

In reality, the STATE Guards (not all states have them) are
little more than state political constructs to enable a few
to play soldier and otherwise establish their machismo. Part
of that is the ever-present "conspiracy theory" coupled with
some kind of imaginative armageddon scenario of a doomed
future where everything in a state is in ruins or anarchy but
the "state guard" can step in and "restore order."

The curious thing about the latter is that some of the Believers
in the efficacy of morsemanship think in the same manner...that
only amateur radio survives the worst emergency and that only
morsemanship can be used to call for help. That is patently
absurd in light of reality but founded on the mythos of morse
that grew following the Titanic disaster of 94 years ago.

As to fully-activated National Guard units, the states have
various plans to keep the NG structures and land intact,
usually using civilian personnel (law enforcement, probably)
and that does not require a lot of personnel. In the field
of communications for the REAL public safety agencies, those
agencies are well-supplied with many forms of communication
of their own (outnumbering amateur licensees according to EIA
data of about 15 years ago) that is NOT part of the "telephone
infrastructure" that many ham-patriots erroneously think
"always fails in an emergency." Most public safety agencies
in the USA have established emergency-scenario plans and
they periodically train/drill for those procedures. Very few
amateur radio local organizations do that.

>
>me too

For several months past I simply did not bother accessing Google
for this newsgroup. It was a waste of time when the macho
middle-school mental-adolescents came in and talked trash and
filth to anyone. How many of those anony-mousies were actual
amateur radio licensees is unknown and irrelevant. The known
licensed amateurs just didn't do anything about them. That
presents a very BIG negative on the amateurs' ability "to
police their own." They couldn't. They can't despite their
brags about such "policing."

Robeson once made claims that he was IN one of the local Los Angeles HRO stores, with "friends while visiting them." A big problem with that was that was his claimed time-line and NOT being able to describe, even in minor detail, the locations or the surrounding territory. The first HRO in northern L.A. was in Van Nuys, CA, in the center of the San Fernando Valley. [bought my Icom R70 there years ago] That HRO moved to Burbank, CA, a few years ago, at the corner of Buena Vista and Victory (a major intersection with shops at all four corners). It is across the street from a relatively new food supermarket having a huge elevated sign visible from all four corners. Robeson could not describe that sign, let alone the location, even though it was easily visible (he didn't name the supermarket). It is very familiar to me since my wife and I shop there regularly. Robeson couldn't name a single store in the mini-mall across the street from the market even though there's a Radio Shack outlet next to that HRO. That HRO has now moved again (they had a window sign announcing that for weeks) and we will see if Robeson wants to repeat all of his lies about being in any one of them. :-)

>>> > Robeson imagined himself to be a "real" GSgt, a DILL sergeant

>
>> Guess the wannabe DILL sergeant told me, huh? :-)
>
>well real boot camp would pleasenter than what Robesin would devise
>
>I know Boot camp was accuauly the most fun I had in the army

Brian and I were being sarcastic about "boot camp." The US Army and the USAF *never* had "boot camp." In those branches is was called BASIC TRAINING. It still is and is usually referred to familiarly as just "Basic."

I "took Basic" at Camp Gordon (now Fort Gordon) which was in 1952 a Signal Corps center and now THE Center for Army Signal Corps. We had to learn basic infantryman soldiering, how to "close with the enemy and destroy them." No fun in that part of Georgia near Agusta. The only communications taught in Basic were courier duties and connecting/using an EE-8 Field Telephone plus laying field wire (real grunt work carrying that auto-pay-out wire box on a back pack). After 8 weeks of Basic we were assigned to Signal Schools...Field Radio and TTY at Gordon, radar-microwave-photography at Ft. Monmouth, NJ. For me, "fun" didn't begin until Monmouth and the ability to actually handle radios, examine their guts and theory, use them on the air.

Things have changed greatly in military communications since 54 years ago. The Field Radio MOS long since became extinct and with it the need to learn manual radio-telegraphy. HF radio is still taught but more as an adjunct to VHF radios common from small units to battalion level...the SINCGARS family of digital voice/data, optional frequency-hopping and encrypted modes with a quarter million produced since 1989 and all operational...to be replaced soon with a compatible but upgraded family of radios with more and better features. HT-sized SINCGARS-compatible radios are being used in Iraq and Afghanistan now (you can see them on news telecasts). The ONLY radiotelegraphy classes are centered at the Military Intelligence School at Ft. Huachuca and that for (passive, listening-only) Intercept Analysis purposes, not communications.

Some non-active or never-serving morsemen in here have insisted that Special Forces "use" radiotelegraphy since a Special Forces Communications Sergeant MOS is required to know that. Special Forces are very macho in image but they, like the USN SEALs, are a very small group of specialists, for (as their name implies) Special operations. The major Army and land-force marines effort is done by regular land soldiers. "Behind the lines" (quaint euphemism) comms can be done by regular land signal units by encrypted data over VHF-UHF, relay by aircraft or satellite, extemely hard to intercept. Even in the 1990 First Gulf War there was no "CW" used from "Behind enemy lines." The AN/PSC-3 did that or, in a few locations inside Iraq, by VHF voice or data.

The extreme mobility of USA land forces now, and in 1990, is described in the many land-forces reports done on the First Gulf War, namely Operation "73-Easting." The final hundred hours of the First Gulf War outdid the best panzerfaust actions of Rommel in North Africa of 1942-1943. About two orders of magnitude better. One thing that the American military did copy from Rommel's units was "Nevis" or NVIS, Near Vertical Incidence Skywave, short-distance ionospheric bounce that some hams deride as "cloud burning." Nevis works rather well and has been a field procedure in USA-USMC-USAF land-to-land comms for at least a quarter century.

World War 2 was over 61 years ago. Vietnam War was over 33 years go. The First Gulf War started (and finished almost as quickly) 16 years ago. The Korean War went into a state of perpetual Truce 53 years ago. Amateur morsemen still gorge their imaginations on the Titanic disaster CW comms of 94 years ago. Time has gone on and technology has changed...for all but those hidebound morsemen are still pipe-dreaming their

imagined glory and self-steam after watching old WW2
movies on late-night TV, demanding that future amateurs
learn morse to defend their homeland. :-)

You might have gotten some priviledges, but that was only because ham
radio has been dumbed down and you didn't have to make an effort to earn
them.

You're too friggen lazy to put forth an effort to earn anymore
priviledges, that's why you want ham radio dumbed down.

Now, if I lived near you, I would do CW practice for you to upgrade. I
honestly would. What you should do if you have an HF receiver is to try
to find some code on air to practice copying.

Maybe you could talk N9OGL into making Omega One a code practice station.
He could send Code practice runs in between all the shitty songs he plays.

4192. Uniden Bearcat BCD996T

Newsgroup: rec.radio.scanner
Date: 2006-09-02 14:22:55 UTC
From: ritchi50@optonline.net
Message-ID: <ud4jf210sfv0el01g2gu0sia9em15a8m7e@4ax.com>
Source record: 6422

I got this Scanner as part of a trade, And I already have a Icom 8500,
so no need for it.
Its brand new, I took it out of the box and made shure everything was
there. Also played with it for a few days and works great!!!
Has the plastic on face and as I stated.....Brand New.
Price new is: 575.00 I want 450.00
ritchi50@optonline.net

The Uniden Bearcat BCD996T is a state-of-the-art scanner radio with
Trunk Tracker IVï¿½ and automatic scanning capabilities. You can store
in the dynamic memory conventional frequencies such as police,
fire/emergency, marine, air, amateur, and other communications. Click
here for a a complete list of frequency coverage. You can store and
scan services that use Trunked Radio Systems and so much more. You can
use the scannerï¿½s Scroll Control to quickly select channels and
frequencies and you can automatically program channels in a system
using the Auto Store feature. The high resolution display indicates
the radio's status in detail.

The BCD996T also introduces the first-ever GPS-enabled scanner,
allowing the product to automatically select nearby radio systems for
scanning. The BCD996T also offers APCO 25 digital capability, allowing
consumers to monitor the activities and signals of city and government
service departments, and features advanced scanner technology in an
in-dash or mobile mount design.

The GPS-enabled feature offered by the BCD996T provides automatic
system selection, which permits the scanner to turn system reception
on or off depending on the userï¿½s location, and allows the user to
define the scanner display to show location-based information. In
addition, when a GPS unit, not included with this scanner, is
connected to the BCD996T, it will alert at areas of special interest,
such as dangerous intersections, school zones, or general points of
interest.

Featuring APCO 25 capability, Unidenï¿½s BCD996T is poised to further
enhance Unidenï¿½s offerings to public safety and increase
interoperability between agencies using different types of radio
systems. Unidenï¿½s BCD996T will not permit users to monitor sensitive,
encrypted signals from national and local security services.

The Bearcat BCD996T also offers Close Callï¿½ RF Capture Technology,
Dynamic Memory Management, Fire Tone-Out, and Multi-site programming
as well as 6,000 channels and a frequency range of 25 MHz to 1.3 GHz
(excluding cellular and UHF TV frequencies). Please click here for a
detailed list of features.

Front-set serial port using the same connector as BC246T/BCD396T/BR330T/SC230. Rear DB9 Male connector (for convenient direct plug-in of GPS Serial cable). Either port can be configured to be PC interface or GPS interface. The memory architecture supports dynamic allocation with up to 500 systems and 6000 channels.

Mark, you have to give up on this anonymous "Slow Code." He is just another of the Bigot Morsemen. He cannot adjust to changing times, changing technology, or (perhaps) changing his underwear.

The FCC establishes regulations for ALL United States civil radio. What the FCC says, goes. The ARRL doesn't rule, morsemen don't rule, and old, old traditions don't rule. The FCC has NEVER said anything about "earning" a license...a license applicant must take an FCC-approved test and score above an FCC-established minimum percentage correct answers. That's all there is. FCC regulations are LAW and that LAW can be changed by democratic principled means. That LAW is not established by some minority group who cannot advance beyond primitive on-off carrier keying.

This "Slow Code" (like all bigoted morsemen) has taken up a role of "I-am-your-leader" gang-banger bullshit bragging and usual calling names of those licensees "below" him. Poor guy (or gal?). That's all this "Slow Code" has...SOME manual morse code skill. He might be right at home in an 1870s telegraph office but his attitude is neither for democratic principles, nor for good fellowship in a hobby, nor as a human being participating in a discussion forum.

The FCC doesn't "rule" on any amateur radio "traditions." It simply regulates ALL US civil radio (amateur radio is a small part of that) and mitigates interference when it happens. The FCC follows the LAW in their charter, permitting an open forum for Comments on NPRMs, even R&Os, open for ALL citizens and even allowing Comments from non-citizens.

Bigot morsemen do NOT allow any opinions opposing their own over-inflated self-defined opinions. They want to RULE all the Homies in da Ham Hood. They think they "own" ham radio when the only thing they've "earned" is a bad attitude against them. It's a wonder they haven't taken up Spark transmitters (even though damped-wave mode is forbidden by law). Spark and morsemanship went together in olden days, days well before the existance of any of the bigot morsemen in this forum. "Slow Code" needs a time machine to go back to that old era since he can't keep up with modern times nor the democratic principles of the representative republic of the United States of America.

As a professional in radio communications, one who began in and on HF over a half century ago, I have contempt for the over-inflated egos of the bigot morsemen. None have made their case valid enough to warrant morse code testing for amateur radio licenses forever. But, the ARRL is toadying to them, vainly hoping to increase their minority membership by sticking to the amateur practice of a half century ago. ARRL membership hasn't increased beyond a quarter of all licensed radio amateurs in the United States, nor has the ARRL favored, ever, the VHF-and-up amateur radio licensees beyond the barest minimum of mentions.

Sooner or later the FCC will yield to PUBLIC pressure to modernize US amateur radio beyond the old-fashioned limitations and favoritism towards morsemanship lobbied for by the ARRL. It may not come in "Slow Code's" lifetime since he is of the group where a morse key has to be pried from his cold, dead fingers. Poor "Slow Code," old before his time, unable to fit into this new millennium of radio technology.

Go for it, Congenial Fred, show 'em who's boss in da ham hood!
:-)

Ya know, US amateur radio is supposed to be about good
fellowship and all that warm and fuzzy stuff. Poor Fred
long since ran out of warmth and his mind is fuzzy...tsk.

What are YOU "better at," Congenial Fred? Morse code? I'm
sure you are a whiz at that. Anything else except getting a
bad score on the range after shooting off your mouth? I'll
bet not.

Wow (yawn) 50 years a ham (and still not cured). I've been
a professional in radio longer than that. Fascinating stuff
that radio and electronics technology. Morse code isn't
technology per se...it was being done over 40 years before
the first radio-as-a-communications-medium was demonstrated
in 1896. But you "are better" than non-morsemen because you
passed a NON-TECHNICAL, NON-INTELLECTUAL manual morse code
test...as an AMATEUR. [big Ben Stein "wowwww" here]

"Welfare license?" Just because there's no manual morse
code test for Technician class? Oh, my, but the FCC does
NOT say anything about "welfare licenses." That's only your
own BIGOTRY vomited up. Almost half of all US amateur radio

licenses are now in the Technician Class. Are you deliberately trying to alienate half of all ham licensees? Well, Congenial Fred, you are doing real good on that alienation part.

Have fun on "the bands," Fred, there's plenty of your kind there, the bigoted morsemen, the self-proclaimed gods of AMATEUR radio trying to be "leaders" in da ham 'hood.

Fred, support stem cell research. You've lost too many neurons required for good fellowship...maybe some stem cells can help restore them.

Brian, sudden realization! We may have found the illegitimate
biological father of Stebie Robeson!

Same ego, same "better than you" bad attitude, same lack of good
fellowship, same 9-year-old's sass, same-o same-o! Incredible!

Then again he may be a cousin to that anony-mousie "Slow Code."
Lots of inbreeding going on in the morsemen ranks.

I wonder where Jimmy Noserve is hiding? Fred said "shut up!"
Jimmy would have a hissy fit if'n he saw that...:-)

I extend fellowship to REAL hams, you no code idiots are not hams, simply CBers that have the ability to read at a third grade level.

Everyone serves a purpose, even if only as a bad example... No code, non showering, non intellectial, whiners holding welfare licenses meet that criteria to a "T".

Now that you have been responded to in the manner you accuse all code able hams of, you may cease your trolling...

I don't really give a flip one way or another if you ever know code, I just wish the bunch of you would stop playing "pity me" and lamenting the fact you do not have a no code Jesse Jackson type to take up your cause. You have a license, enjoy it and if you don't care to learn the code, someday you won't have to. In the mean time shut up with the whining and get on with life.

The license is only worth the investment you have in it, no effort - no value! If you spent half the time learning as you do bitching you would be at 40 WPM.

Fred HaFrom: Fred Hambrecht on Sat, Sep 2 2006 6:02 pm

>I extend fellowship to REAL hams, you no code idiots are not hams, simply
>CBers that have the ability to read at a third grade level.

Tsk, tsk, Fred. Had you been able to read RRAP before, you'd
know I have no amateur license, only a commercial one. :-)

So, you think that US amateur radio is defined ONLY by
morsemanship? Of course you do. You are unable to cope
with any other definition. The FCC doesn't think so,
Congenial Fred. Only you and the rabid olde-tyme
morsemen think so.

>Everyone serves a purpose, even if only as a bad example...

You fill that bill to a "T" Congenial Fred. :-)

>No code, non
>showering, non intellectial, whiners holding welfare licenses meet that
>criteria to a "T".

"Non showering?" :-) Shirley, you can think of some
metaphor better than that! :-)

"Non intellectial?" Oh, you mean 'non intellectual."
Tsk, tsk, Congenial Fred, if you wish to appear 'intellectual'
you really ought to learn to spell correctly... :-)

"Whiners?" Poor congenial Fred, can't understand that there
are several valid reasons being held by the majority AGAINST
morse code testing. You want to impose YOUR imperial will
on the majority... Tsk, tsk, not a nice democratic
principle idea.

"Welfare licenses?" I got my First 'Phone in 1956, one test
session at the Chicago Field Office of the FCC. Had to pay
my own way in on the train. No snow, ground was level, and
I kept my shoes on the whole time. Guess that isn't near as
good as all them olde-tymers in the ham boonies, huh? :-)

>Now that you have been responded to in the manner you accuse all code able
>hams of, you may cease your trolling...

Fred, you've shown yourself to be a first class morse BIGOT,
one with a totally closed mind who lives in the past. But,
that's not unusual among some of you kids (your birth year is

1939 but mine is earlier). After you hit the magic 65-year
mark you go all shirty and start whining yourself about how
"tough" YOU had it and how "loyal and principled" you are
and how the "younger generation is no damn good" because they
don't like YOUR ideals of a long-ago youth. I know, I've seen
it hundreds of times...and am damn glad I never succumbed to
such mental sickness. :-)

Oh, and I do NOT "accuse all code able hams" of anything, only
YOU, Fred Hambrecht, and all the other morsemen bigots who
trash-mouth everyone who doesn't care for morsemanship.

I don't "troll," congenial Fred, I CATCH. I've presented my
views before the FCC clearly, logically, with facts researched
and noted. Many times. I don't sing praises about morse code
or testing for the simple reason that there's no praise for
either.

>I don't really give a flip one way or another if you ever know code, I just
>wish the bunch of you would stop playing "pity me" and lamenting the fact
>you do not have a no code Jesse Jackson type to take up your cause.

Tsk, are you a racial bigot ALSO? I'm not black, congenial
Fred, don't fake any religious titles nor academic titles nor
the usual bragging bullshit common to so many amateurs. I've
been on this planet longer than you have and made my own way
without asking for welfare. Up yours and enjoy your food stamps.

Well, maybe no "Jesse Jackson" but you pro-code-test mavens DO
have the Church of St. Hiram on your side plus all the Brother
Believers in Newington alla time singing the praises of
"cee-double-yew" that all good maxim-fearers must follow.
To the letter. To a "T."

>You have
>a license, enjoy it and if you don't care to learn the code, someday you
>won't have to.

I have a license, Freddie baby, but it NEVER had any requirement
to learn morsemanship skills. I've had other FCC licenses,
Freddie, and those didn't have any need to learn code. Of course
those were all commercial-professional, not the mighty amateur
kind (which you no doubt consider much, much more valuable).

Freddie booby, 53 1/2 years ago the US Army had me and
several others starting to operate HF transmitters of higher
output power than was ever allowed to amateurs. NO license
test needed. NO morsemanship skills needed...NO morse code
modes were used to keep dozens of circuits open 24/7.

I didn't have to know or learn morsemanship over a half century
ago and haven't needed it in all the time up to now. You come
along like some adolescent male and talk trash to me and other

no-code-test advocates and say I "must?" Oh, my, you must
think your morsemanship skills are super-macho with
superpowers!

>In the mean time shut up with the whining and get on with
>life.

Shut your own, bigot Freddie. You get NO breaks acting
like a morseman bigot. Bigots don't deserve any civility.

"My life" is going on just dandy without you, Freddie. Try
to stay out of it. Intrude on it and you get stepped on.

>The license is only worth the investment you have in it, no effort - no
>value!

Oh, wow, trotting out the "moral paragon" ploy are you? :-)

Sounds like you are getting ready to enter the seminary at
the blessed Church of St. Hiram!

>If you spent half the time learning as you do bitching you would be
>at 40 WPM.

One "learns" a psycho-motor skill? :-) It is DEVELOPED,
Freddie boy, isn't one damn thing "intellectual" about it.

Pressing the government for a change in certain laws, such
as the regulations concerning amateur radio licensing, isn't
"bitching," colonial Fred. It is simply a democratic
process to change archaic laws and regulations that have no
use today. But, you fear change. Such might detract from
your mighty self-image of an amateur morseman, god of radio,
and ruler of the ham-ways. :-)

Or is it that you want to CONTROL others, have them do as
YOU command and to hell with democratic principles of law?
Clarify that for us, Freddie, you seem to be swinging both
ways.

Freddie, there is zero-point-zero interest in "learning"
any psycho's motor skill in this new millennium. It isn't
used for communications in any other radio service under
USA regulations and won't be...except in the time-retarded
imaginations of some US radio amateurs who dream of ever-
lasting glory of the beeperman.

There is one helluvalot MORE INTERESTING, INTELLECTUAL
things to do in learning the theory behind the front
panel. Don't speak blithering drivel about "beauty and
majesty" of monotonic on-off tones while caressing your
vibroplex...the only "theory" there is turning something
on and turning something off. You can do that with a
buzzer if it turns you on so strong.

You want to do 40 words per minute using morse? Fine. Go for it. I've been doing ONE HUNDRED TIMES that with data and that's at a slow speed. The world's comms aren't about manual telegraphy, Freddie, that's a long-past time that began before you and I were born. It is OLD stuff.

Now you go right ahead and enjoy your "ARS" (Archaic Radiotelegraphy Society). I'm sure you feel all authoritative with your federal AMATEUR license and all. Tell everyone you are "federally authorized." Invite your friend and neighbors in to view your mighty license certificates (suitable for framing). Feel proud for you are a MORSEMAN! [god of radio, ruler of the ham-ways, etc., etc., etc.]

Beep, beep

Mr Benevolent Congeniality, while it may be your desire to fulfill the wishes ot the no-code troll, there are just too many trolls on RRAP. I you go around and start fufilling the expectations of all trolls, this newsgroup will end up being trashed and unreadable.

Do you want that on your conscience?

In your owners manual under truobleshooting there is a section on how to
reset and how to initialize the scanner.
If you don't have a manual you can join the Pro93-95 Yahoo group and
download one there.

Jimmie Noserve showed up with his bimonthly Numbers (his period
on?)...still trying to "prove" that Technician class licensees
aren't really no-coders. :-)

Robeson showed up wondering who "Robesin" is...only proving that
the poor guy can't realize it is himself. He always was
illiterate in regards to alliteration.

>Welp, if Fred had a tour in Ohio as an Army recruiter back in the 70s...

Ya know, that always bothered me. Why would an ex-NAVY person
be "recruiting for the ARMY"? [explanation for the trash-mouth
newcomers: Robesin once claimed - in here - that was what his
late father did, but didn't say when or exactly where] The Army
has always used active-duty Army NCOs for such tasks since before
1973 (the ending of the "Draft"). Strange LIE by Robeson, must

have been done at time of some bad goods he swiped out of the Sharps box.

A "Sharps box" is colloquial term for a plastic container (usually wall mounted) for biological waste in medical facilities, sometimes referred to as just a "Sharps." Made by B. D. Sharps company and not affiliated with the dullness of the pro-coders. They can be seen in most doctors' offices and hospitals all over the country.

Robesin is going to come back and say "it's not nice to talk about medical things" as if he is some kind of code caduceus bearing "judge" of medicine. :-) He is a nurse (probably using a wastebasket-salvaged 1983 edition "Physician's Desk Reference" as his medical terminology guide). If he REALLY wanted some REAL rank, he could devote the next 9 years of his life to add MD after his name and honestly say he "saves lives." Tsk, he can't save his own life from the disease of impersonation. May a colony of helicobacter pylori set up housekeeping in his duodenum! :-) [he can share that with papa Fred]

Freddie baby is prolly setting up a spittle session in here bitching and bad-mouthing anyone who doesn't want to relive times past a half-century ago when Kode was King. We'll see what his kind of foaming-at-the-mouth trash talk against "no-coders" will be. :-)

interest that he still does that of course he still goes on when he
does post about being robbed in "incentive licensing" back roughly 50
years there was the real mistake and all the result of the ARRL's power
being misused, everything since has been trying to clean up the mess
that caused

Tell before that point what was the Code test speed reqrired for the
General License? some where I recall it being 5 wpm
>

I don't think Robeson could cut it

leaving ot the issue of could Robeson do the courework (I am not surre
I could) he could never survive the process with his temper he'd blow
somewhere and likely kill some one (either by fucking up or flat out
murder) he dropped out of Nursing school by his own admission (maybe he
was asked to leave who knows)

They are free to join. They ask for a donation to get the files to upload to the popular trunked scanners. But the databases are free. To join it is only $2.50 a month. Very cheap considering you may spend that much daily at 7-11 for a cup of coffee in the morning and a big-gulp later in the day.

Correction, Mark, Blow Code likes lots of BS. :-)

He also wants lots of attention and might want to be the
successor to that military impostor Robeson.

>> BTW, I didn't know we lost ham radio and need to take it back.
>
>his idealogy lostcotrol of Ham Radio completely about 20 years ago with
>the introduction of the No Code license

Actually 16 years ago (1990) but the movement to end the
morse code testing for AMATEURS had begun much earlier than
that.

Prior to the opening of the Internet to the public in 1991
the ARRL could retain attornies in DC to promote Hiram
Percy's ideals of morsemanship. [paid for by ARRL
members] However, no-code-test advocates did manage to
get their Petition into the NPRM stage in 1990. That
passed into LAW in 1991 and the rabid morsemen have
been frothing at the mouth over it ever since.

Interestingly enough, the ARRL had to retain a lobbyist
organization after the Internet went public...in addition
to the law firm on retainer. [also paid for by ARRL
members] The competition for the FCC's ear had grown
now that amateurs could "talk" to the FCC directly instead
of being filtered through the ARRL. Rightly so since the
ARRL membership has never been more than a quarter of all
licensed US radio amateurs. Democratic principles in
action for this republic, not the monopolistic pseudo-
"representation" of a minority group organization.

>he is going to whine for another 50 year or till he drops dead

Has Blow Code ever identified himself by callsign?

Blow Code is more likely just one of the 'others' under
a new pseudonym. Either that or the pro-code-testers are
just all parroting the ARRL dicta (or is that "papal

encyclical'?) from the Church of St. Hiram in Newington.

>> Blow Code, think before you type will you? You spend entirely too much
>> time on the computers. Get on the radio and talk to all the old timers
>> on CW will you? They are lonely and need you there.
>
>thinking? I realy don't thik he can do that he seems to be one of those
>fellows for whom Narrow Band OOKed RF causes brain problems

My take on that is the monotonic beeping did it. :-)

Rabid morsemen reject all communications outside of their
very tight little RF spectra and sing praises of their
very narrowband mental viewpoints. Maybe that's what
they think is "intellectualism." :-)

Or, it may be some undiscovered malady in their brain
which also keeps them from advancing beyond their mental
youth. They can't think "outside their box" but then few
morsemen can think inside the box containing their radio
circuitry. It seems that anything other than their
twitching fingers carressing their code keys is some
mysterious, alien "force" in those radio boxes, a deep
mystery to them. The signs pointing to that are their
inability to talk technical other than parroting (again)
the ARRL information spoon-fed them. That lack of self-
confidence or insecurity may lead to their defensive
"we are better than you!" shouting about their beloved
psycho-motor skill of morsemanship.

Gotta love their LACK of technical details, all the time
praising to the skies of their narrowband signals yet an
almost utter lack of understanding Shannon's Law, the
universal relationship of message rate, random noise,
information error, and bandwidth. Maybe they can't
THINK faster than 20 to 40 words per minute? :-)

US amateur radio appears to be quite alive and well today.
That despite the ARRL's insistence that all amateurs
should emulate the standards and practices of the 1930s.
Instead of trying to take a neutral, hands-off policy on
code testing, the ARRL ought to look at itself and the
reason they can't get membership from the three-quarters
of all amateur licensees in the USA. That majority IS
the future of US amateur radio, not the frozen-in-their-
youth delusions of some olde-tyme morsemen.

I doubt it. Robesin has a peculiar format in his text and shouts
denigrations to others too much.

> > >> BTW, I didn't know we lost ham radio and need to take it back.

That mold isn't so much warped as just OLD. It was fine in 1930
but 1930 is 76 years ago.

> > >> Blow Code, think before you type will you? You spend entirely too much

> that caused

Jimmie Noserve got hopeless when he tried to be some kind of
"informed insider" into the aerospace business here and his
attempts to "correct" REAL military veterans. He also tried to
foist off his old "$100 rig" as his own design but it was really a
near-copy of the "HBR" series that began in QST years ago.
Jimmie made the mistake of posting on that (relatively new
website) showing his HBR version, the very same photos he
had in a link posted here when he claimed it was all "original."
:-)

Tsk, that won't stop the "investment" olde-tymers...they will be
bad-mouthing no-code-test-advocates until their code keys are
pried from cold, dead fingers.

Or maybe nobody wants to talk to him... :-)

>the CW has seen the light that being they betrayed the ARS by listening
>to the ARRL what 50 years ago

I don't think the ARRL "betrayed the ARS". I believe that they
sincerely thought that morsemanship was THEN a topmost skill
of US radio amtaeurs. Fifty years ago would be 1956 and not
long after the passing of ARRL co-founder (and president-for-
life) Hiram Percy Maxim. "T.O.M." used his editorial pages
to promote morsemanship in the 1920s and 1930s.

The original core group of the ARRL were go-getters and smart
enough to realize that, to make enough money as an organization
that came out on top, PUBLICATIONS were the key to survival.
ARRL was first a very small group of local New Englanders,
formed 5 years after the first (and still surviving) national
organization, the Radio Club of America. There were lots of
"national club" competitors in the 1920s but those eventually
dropped out. RCA still exists but is not much concerned with
amateur radio.

Prior to the Internet going public in 1991, the only major
presence for US amateur radio in DC was the legal firm on
retainer from the ARRL. ARRL kept promoting themselves as
"representative" allegedly for the amateur to the FCC but
suspiciously more like a "filter" of amateurs' opinions.
That changed dramatically once the FCC got their website
going and ramped up to take Comments electronically. The
ARRL had to retain a second firm in DC for lobbying.

The evidence is an observation of the number and kind of Comments on 98-143 "restructuring" versus Comments on all those Petitions and last year's NPRM concerning code testing elimination. The pro-code-test advocates' Comments were straight out of the League hymn book about morsemanship with a few adding in nebulous advantages for "homeland security" necessities! [those Petitions began after 11 Sep 01]

What is more telling about the League's stubbornness on their pro-code-test stance is that the IARU took a firm stand on changing the ITU-R amateur radio regulations compulsory (by administrations) morse testing for any license having below-30-MHz privileges...the IARU wanted it OPTIONAL by all administrations (at their discretion) a good year BEFORE WRC-03. The ARRL wanted to keep the compulsory regulation. After WRC-03 the League took a neutral stance, neither for nor against code testing in the USA. It's still a "ARRL versus the World" situation.

>> >> Thank you, Rick! You spoke volumes of reality in this new

>
>yet I do wonder if he isn't Robeson somedays but I am pretty sure he is
>just another bitter old that bought into "incetive Licesning) the brain
>child of the ARRL

It should be abundantly clear that "Incentive Licensing" was never about "advancing" in amateur radio beyond getting TITLE, RAND, and STATUS. That was VERY important to the controlling coterie of the League, folks who wanted to be "better" than others...in a hobby activity.

What "incentive licensing" DID create was just the opposite of "good fellowship" among amateurs, that of CLASS DISTINCTION and a "pecking order" based largely on morsemanship. The morsemen won it. Never mind that radio technology was already far advanced from the 1930s' style of amateur radio and that morse code was falling by the wayside in every other radio service, the League still (stubbornly) held to the belief that all amateurs "should" be able to be morse skilled...even four decades after the 1930s.

The League lobbied for and got the "vanity license" system so that olde-tymers could get their 1x2 and 2x1 super-special guru-status callsigns. Even more status symbolism. Combining "vanity" calls and "incentive licensing" there was a perfect

setup for all who managed to get both to crow and holler they
WERE BETTER than all others. Good fellowship went out the
window...rank, status, title RULED.

>> >Now go bullshit with Dr Death on 11 meters, and don't come back until you

>
>> I don't know any "Dr Death," "Slow," nor do I operate on
>> "11 meters."
>
>> Further, you are ten kinds of short on ability to threaten.
>> Your threats and "orders" become recycled electrons doing
>> nothing but dissipating a tiny bit of heat. <yawn>
>
>amasing how they keep resorting to threats and orders

That's all they have left in this new millennium, Mark.

Some of them, such as Blow Code and Hambrecht still think
they are "better than others" in all aspects, not just
morsemanship. They LIKE that. So much so that they are
in great personal fear of losing that very precious rank,
status, title, and privilege that MIGHT happen if the
code test is eliminated. They will LOSE their "better
than you" rationalization. Internally the sky will have
fallen on their self-perceptions.

Personally, I think radio and electronics is totally
fascinating. So much so that I made a career choice of
it while studying for an entirely different sort of
work. Professional work, not some amateur dabbling,
yet I liked to make electronic things in my home
workshop. Things other than work-related tasks. It
is FUN, personally rewarding, not "work."

I got into Big Time HF comms 53 1/2 years ago and have
seen what modes DO work well and on a 24/7 basis on
long-haul circuits that HAD to be kept working. Years
later some KID is trying to "moralize" me into "working
on morsemanship?" He (or she) can go shove it
somewhere...until he (or she) can prove they've done
more than I in radio communications...which they have
NOT done yet in here.

Once, a very long time ago, I thought that becoming a
"ham" was a cool deal. That was before the commsats,
before technology had fully gotten with the semi-
conductor era, before the wonderful way we can get
over most of the world via PCs and the Internet. Why
IS it that some have to be a grand champion of the
1930s over seven decades later? What are THEY trying
to prove? I could care less about 1930s technology

and the "radio standards" of then. I live in the NOW. If some dumbshit wants to moralize about "working" and "investing" he (or she) can go get some flagellation and suffer themselves for their own "cause." I'm not about to join him (or her) in such moralistic self-abuse/mis-use. If these self-styled emperors want to flap their new clothes in my direction, I'll just keep on pointing out that they are NAKED (and ugly).

The FCC thought so too - well into the 1970s.

> Fifty years ago would be 1956 and not
> long after the passing of ARRL co-founder (and president-for-
> life) Hiram Percy Maxim.

Maxim died in 1936. 1956 was twenty years later.

> "T.O.M." used his editorial pages
> to promote morsemanship in the 1920s and 1930s.

He also promoted many other things on those pages, such as technical progress, operating skills, public service, and the observance of government regulations.

> The original core group of the ARRL were go-getters and smart
> enough to realize that, to make enough money as an organization
> that came out on top, PUBLICATIONS were the key to survival.

Publications were one way to support the organization. They also supported amateur radio by offering low-cost information specifically for the radio amateur.

> ARRL was first a very small group of local New Englanders,
> formed 5 years after the first (and still surviving) national
> organization, the Radio Club of America.

But it didn't stay that way for long. By the time of the 1917 shutdown - just three years after ARRL was founded - it was a national organization.

One of the cofounders, Charles H. Stewart, 3ZS, lived right here in Radnor, PA. Hardly "local" in those days.

> There were lots of
> "national club" competitors in the 1920s but those eventually
> dropped out.

Name some.

> RCA still exists but is not much concerned with
> amateur radio.

It is a very small organization whose main activities seem to be
honorary and historical.
>
> Prior to the Internet going public in 1991, the only major
> presence for US amateur radio in DC was the legal firm on
> retainer from the ARRL.

There was nothing to stop others from doing the same thing. Nor from
contacting FCC directly.

> ARRL kept promoting themselves as
> "representative" allegedly for the amateur to the FCC but
> suspiciously more like a "filter" of amateurs' opinions.

Why are you suspicious, Len? Anyone could petition the FCC directly,
and many did, long before the Internet and ECFS.

> That changed dramatically once the FCC got their website
> going and ramped up to take Comments electronically. The
> ARRL had to retain a second firm in DC for lobbying.

All ECFS did was to make it easier to petition and comment.

Back in the 1960s, when the changes known as "incentive licensing" were
being debated, FCC received over 6000 comments from individuals and
groups. There were at least 10 proposals besides the ARRL's. Those
other proposals were taken seriously enough by FCC to get RM numbers.

> The evidence is an observation of the number and kind of
> Comments on 98-143 "restructuring" versus Comments on
> all those Petitions and last year's NPRM concerning code
> testing elimination. The pro-code-test advocates' Comments
> were straight out of the League hymn book about morsemanship
> with a few adding in nebulous advantages for "homeland
> security" necessities! [those Petitions began after 11 Sep
> 01]

??

The fact is that the majority of individuals who commented supported
the retention of at least some Morse Code testing. The majority also
supported elimination of the Morse Code test for the General Class
license.

> What is more telling about the League's stubbornness on their
> pro-code-test stance is that the IARU took a firm stand on
> changing the ITU-R amateur radio regulations compulsory
> (by administrations) morse testing for any license having
> below-30-MHz privileges...the IARU wanted it OPTIONAL by all
> administrations (at their discretion) a good year BEFORE

> WRC-03. The ARRL wanted to keep the compulsory regulation.

Not true! Not true at all, Len.

The fact is that way back in 2000 or 2001, the ARRL BoD changed their
policy wrt S25.5. They decided to neither support nor oppose changes to
ITU-R S25.5.

Given the strong support from many other member countries to change
S25.5, the ARRL's no-opinion policy pretty much guaranteed there would
be majority support to change S25.5.

> After WRC-03 the League took a neutral stance, neither for
> nor against code testing in the USA. It's still a "ARRL
> versus the World" situation.

Wrong again, Len!

In ARRL's petition to FCC, they proposed eliminating the Morse Code
test for General but retaining it for Extra.

The majority of individuals commenting on the NPRM wanted the test
eliminated for General.

The majority of individuals commenting on the NPRM wanted the test
retained for Extra.

The two majorities are not composed of all the same individuals, but
they *are* majorities.

"RAND"?

Do you mean Remington Rand, Ayn Rand, or the South African monetary
unit?

> That was VERY important to the controlling
> coterie of the League, folks who wanted to be "better" than

> others...in a hobby activity.

Nope. That's not what it was about at all, Len. Do try to get your history straight.

The fact is that the "incentive licensing" changes were an attempt to *return* to a system something like that which existed before February 1953. The complexity of the final result was due in large part to it being pieced together from the numerous non-ARRL proposals mentioned earlier.

btw, the 1951 restructuring that gave us the license classes with names rather than letters was not primarily driven by ARRL.

> What "incentive licensing" DID create was just the opposite of
> "good fellowship" among amateurs, that of CLASS DISTINCTION
> and a "pecking order" based largely on morsemanship.

How so?

Did you forget about the written tests?

> The
> morsemen won it. Never mind that radio technology was already

> all amateurs "should" be able to be morse skilled...even four
> decades after the 1930s.

How many other radio services used Morse Code in 1966, Len?

Was there a shortage of trained radiotelegraphers during the Vietnam War?

> The League lobbied for and got the "vanity license" system so
> that olde-tymers could get their 1x2 and 2x1 super-special

btw, Len, did you ever manage to get your Extra out of the box? It's been more than six and a half years now...

> >> Further, you are ten kinds of short on ability to threaten.

Well, maybe they are, Len. Or maybe they aren't.

Why does it bother you so much?

Do you have a need to look down on everyone?

> They LIKE that. So much so that they are
> in great personal fear of losing that very precious rank,
> status, title, and privilege that MIGHT happen if the
> code test is eliminated.

How will any currently licensed amateur lose anything if the Morse Code test is eliminated?

> They will LOSE their "better
> than you" rationalization.

How?

If they really are better than you, they'll still be better without the test. And vice-versa.

> Internally the sky will have
> fallen on their self-perceptions.
>
> Personally, I think radio and electronics is totally
> fascinating.

Me too. Amateur radio particularly.

> So much so that I made a career choice of
> it while studying for an entirely different sort of
> work.

Funded by the taxpayers, too.

> Professional work, not some amateur dabbling,
> yet I liked to make electronic things in my home
> workshop.

Does being paid for something make someone automatically "better", Len?

> Things other than work-related tasks. It
> is FUN, personally rewarding, not "work."

But not rewarding enough for you to get an amateur radio license, it seems.

Or have you gotten that Extra out of its box, as you told us you were going to do, way back on January 19, 2000?

> I got into Big Time HF comms 53 1/2 years ago and have
> seen what modes DO work well and on a 24/7 basis on
> long-haul circuits that HAD to be kept working.

Using equipment supplied and paid for by others. With a team of several hundred people trained to do the job.

That doesn't make you more qualified to judge what amateurs do - self-funded and largely self-trained.

> Years
> later some KID is trying to "moralize" me into "working
> on morsemanship?"

Is youth somehow wrong, Len?

> He (or she) can go shove it
> somewhere...until he (or she) can prove they've done
> more than I in radio communications...which they have
> NOT done yet in here.

I see.

What if someone older than you, with more radio experience, told you that you should work on your morse code skills? How would you react?

> Once, a very long time ago, I thought that becoming a
> "ham" was a cool deal. That was before the commsats,
> before technology had fully gotten with the semi-
> conductor era, before the wonderful way we can get
> over most of the world via PCs and the Internet.

What about your posting of January 19, 2000?

> Why
> IS it that some have to be a grand champion of the
> 1930s over seven decades later? What are THEY trying
> to prove? I could care less about 1930s technology
> and the "radio standards" of then. I live in the NOW.

Then why do you tell us so much about your past?

btw, if you are *not* interested in becoming a ham, why are you so vocal about the requirements?

> If some dumbshit wants to moralize about "working" and
> "investing" he (or she) can go get some flagellation
> and suffer themselves for their own "cause." I'm not
> about to join him (or her) in such moralistic self-

You sure seem to spend a lot of effort arguing about it, though.

Why?

> If these self-styled emperors want to
> flap their new clothes in my direction, I'll just keep
> on pointing out that they are NAKED (and ugly).

Perhaps they are simply holding up a mirror.....

Gee, Len, it's been more than three years since the ITU treaty changed.
Some countries have eliminated Morse Code testing, some haven't, and at
least one (Canada) has worked out a unique solution to the debate.
Meanwhile the USA rules on the subject haven't changed since 2000.

Are you frustrated because your will has not become law...yet?

Gee, Len....do you think posting that way will cause people to change
their minds and agree with you?

Do you think FCC would be convinced by such arguments?

Is that sort of posting your idea of how a "professional" behaves?

I think they betrayed it wether they meant to or not by as you will
sowing the seeds for the battles that were to follow

indeed in looking only back at Maxim I submit they betaryed even him
>

and therby betraying the fundental core of the service, a change that
needs to removed altogether if possible hence my fovoring a oe 2 class
license system with the prevedlges indentical to all the lclasses that
exist (with modern radio I reconize it may be needed to have some sort
of up or out license with 10 to do it becuase of the volume of material
but the classes should be equal in preveledge and the class should not
be a publicly accsable (except on an ARS wide) basis

They just want to be appliance operators Fred, they don't care if they
can't commute. They want to pick up a microphone and start gabbing. A ham
license means nothing to them, and will mean even less if ham radio tests
are dumbed down more.

Cityfreq is worthless, full of inaccuracies, misspellings, etc.
Radioreference is the best.

I am going to my first nascar race in two weeks and was wondering if anyone knows where I can get a list of frequencies for the drivers and pit crews? The race is in Louden NH so anyone has track frequencies that would be great.

Thanks in Advance-John in Ct

What the hell do you know about real "frat houses", you illiterate
moron, besides when you watch a rerun of "Animal House" on TV? You
sure were never in a real frat house at any time.
```

Careful, careful, Mark...Sister Nun of the Above, now the
Mother SUPERIOR is BACK, ruler in hand, ready to spank the
knuckles of anyone who DARES say anything negative about
the blessed, sacred ARRL!

I was literally going back 50 years to 1956 and remembering
how both the electronics hobby and the (much, much bigger)

electronics industry was doing...preparing to move to
California and the aerospace industries that year. Frankly,
the ARRL wasn't keeping up with the electronics industry
other than keeping QST afloat with advertising revenue.
Since they were largely unaware (from their publications)
what the (then) long-haul radio communications were doing,
they couldn't really decide which way to go for amateurs.
Their decisions were based largely on ignorance, especially
that of SSB. The commercial-military folks on HF were already
USING SSB on HF and had been doing it for over two decades by
1956...yet the ARRL wanted amateurs to believe that "amateur
radio 'pioneered' SSB." :-) Bullshit.

>be a publicly accsable (except on an ARS wide) basis

Well, it's a subject which is damn clear to outside observers
but the Believers are about to strike a blow for the Church of
St. Hiram. Mother SIPERIOR is back in her habit of
one-liner sentences thinking she can slay the dragons (of her
mind) which defile the sanctity of the Newington folks who
"know what is good for amateur radio!" :-)

Prior to 1990 there were already FIVE different license classes
in US amateur radio. The no-code Technician class made it SIX.
A decade later the FCC chopped that in half. Rightly so in my

estimation. It had gotten literally Byzantine in structure with
the privileged bandplans and who could use what mode. It was
worse than the commercial-professional operator licenses. The
Restructuring was sorely needed for the avocational activities.

The worst blow to the rank-status-title morsemen was cutting
the code test rate down to a single, low one, well below the
exhaulted, royal rate of 20 WPM that they overused for
bragging rights before 1998. :-) Those extra super special
morsemen lost NO PRIVILEGES ON THE BANDS but the sky fell in
on their bragging rights. Boo-hoo, poor morsemen. :-)

>
>and inccreasingly cold and unfeeling and failing to fufill the debt
>they owe to those that came before them

I disagree with you a bit...nobody "owes" anything
other than bill payments, Mark.

The rabid amateur morsemen are just full of themselves.
They have lost their ability to RULE by that singular
skill, are now worried that they might lose all their
rank, title, status, and privileges when the code test
is finally eliminated. Few of them seem to have much
for themselves beyond that bragging right. <shrug>

Oh, oh, here comes Mother Superior again, waving
her ruler, a weapon of morale destruction! :-)

>Do you think FCC would be convinced by such arguments?

Mother, I'm NOT posting "to the FCC" here...just to a
mixed group that includes rabid morsewomen such as
yourself.

>Is that sort of posting your idea of how a "professional" behaves?

Tsk, tsk, Mother, "when in Rome, do as the Romans do."
In here the AMATEURS hang out. Ergo, one must adopt
language these AMATEURS us. If that means offending
you, TS.

You don't like that? Go back to the cloister. Pray for
redemption of your soul after being among those you
perceive as evil no-coders. :-)

Thank you guys for the advice. In the meantime I decided to do the unthinkable, RTFM. On page 83 of the manual I found how to reset the scanner (press a pin through a hole on the side of the scanner) and how to initialize it (press 0 then 1 after turning it on). I tried it about 5 times without results but after the sixth attempt the scanner came back to life and started responding to the keyboard. It seems to be fixed now. However, it lost my confidence and I resurrected my old PRO-37 and keep it as a backup.

You're living proof CW was a good filter for lazy lids. It didn't keep all
the lids out, but it did keep stupid ones out until they come up with the
no code tech license.

You can be a ham, Mark, but only if you decide to make an effort to be one.
Dumbing down ham radio the way you want is like burning down the club house
and selling the land to CB'ers.

I won't suggest stamp collecting for you Mark. You would probably whine
that the little boxes where you paste the stamps are too small and you
won't go any further until the post office makes bigger boxes, and that
the problem is the big stamp collectors want stamp collecting to be like
a frat house and squeeze out the little guy.

Ping real Hams,

You'll want to use CW if you ever have to save len Anderson, that
should help him change his brain cell regarding the value of Morse.

Thanks

From: **THE-RFI-EMI-GUY** <rhyolite@nettally.com>
Message-ID: <WS3Lg.18661$Tg1.12847@tornado.tampabay.rr.com>
Source record: 6478
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

For Sale: HP3586B Frequency selective level meter VLF receiver

This unit has the high stability oscillator and is excellent condition. No dents, no scratches, and no dust inside whatsoever. I believe it was rack mounted at an environmentally controlled site and seldom used. I don't have the feet and the small blank panels (where the rack ears normally go) but these are common size. This unit works fantastic and has a new NICAD memory battery installed. I replaced one of the jacks in front with a BNC (easily reversed mod that screwed in). I also put a nice black anodized aluminum spinner knob on the VFO shaft encoder for ease of tuning. It makes for a very sensitive VLF receiver and can measure extremely low levels with great accuracy. By the way, there is an RF output jack on rear which enables you to sweep filters etc.

The service manual is included.

$495 plus shipping from central florida

Description :

HP 3586B Selective Level Meter 3586B: Meets North American Bell requirements, 50Hz to 32.5MHz frequency range with 75ohm unbalanced signal input, 4kHz to 1MHz frequency range with 124ohm balanced signal input, 4kHz to 1MHz frequency range with 135ohm balanced Input

Free to join the forums, free to access the database - which IS what
the OP asked for - frequencies.

Not free to run an ARC program and automatically download the data.
But, then, neither is the ARC program.

Lennie, Lennie, LENNIE!

How SOON you FORGET!

You let that license EXPIRE back in October 0f 2000 ! ! !

Or so you said!...Of course every Amateur Licensee except Morkie
and Brain jumped on you for that...Knowing full well that GROLs do NOT
"expire" until YOU expire.

Of course it's YOU who is always chiding Amateurs for not knowing
anything other THAN Amateur Radio, which is a pretty stupid claim...But
then you ARE pretty stupid.

And here you are spreading some more of that "stupid" around....

Silly Lennie...Tricks are for kids!

This is where your analogy falls apart. CW is currently very useful to hams. It is in daily use. However, the arguments have already been presented and those with closed minds have rejected them.

Dee D. Flint, N8UZE

Sorry, but your wrong, my analogy is just fine for this subject. CW to a ham, like carpentry to a mechanic, can be useful BUT is NOT NECESSARY for each to do what they want to do effectively and properly.

Don't be one of those closed minds.

Yes, a ham CAN use CW if he wants and more power to him/her to do so. A mechanic CAN learn to be a carpenter if he wants to and more power to him/her to do so. But carpentry will not make a mechanic a better mechanic, no more than CW will make a ham operator a better ham operator. More useful to themselves and others, but NOT better.

Just because carpentry COULD maybe be useful to a mechanic does not mean that he should be required to learn carpentry to be a mechanic. A mechanic can be a damn good mechanic without picking up a hammer and a ham can be a damn good ham without touching a key.

I said it before and I'll say it again. 70 years ago a good mechanic needed carpentry skills but no more. 70 years ago a good ham needed to know code but no more. A code test for todays prospective hams is like a carpentry test for todays prospective mechanics.

When you have to spend time building a skill, you spend more time learning other related things as well. Hams that haven't had to study to pass a 13 wpm CW exam, probably don't know the written portion of the exam as will as hams that did. If I hadn't had to pass 20 wpm for my Extra, I would have taken the exam a lot sooner, but as I had to build my CW abilities, I also spend more time learning the theory too. It made me a better ham.

You people don't want knowledgable hams anymore. CB'ers dont have to learn CW, are they better?

Was code the ONLY way to learn the written portion? Besides, using a
bunch of beeps to spell out characters over the airwaves takes no
technical ability at all. Here in Canada, a no-code license requires
MORE technical skill than a code license. In other words, here in
Canada you need to learn MORE to pass a no-code license since learning
code is a motor skill, not a technical one.

>You people don't want knowledgable hams anymore.

Learning code does not impart any type of "knowledge" any more than
learning roller skating.

>CB'ers dont have to
>learn CW, are they better?

Based on the CBers I used to hear on the higher sideband channels, I
heard very little of the insults I have seen here spewed by some of
the pro-coders. Therefore, I'd say that they were at least better
behaved than the aforementioned pro-coders.

Yes, there were assholes on CB, but CB didn't make them that way. By
the same token, learning code will not turn an asshole into a nice
guy. CB is just a ham radio in the embryo stage, a zygote. The only
real difference between CB and ham is the choices of bands and the
power of the transmitter, when you really look at things in the most
basic sense.

I recently gave my son my Uniden BC895XLT scanner. I was in Boca this past weekend and we tried to program frequencies in his area into the scanner. We programmed the analog and trunked frequencies into it (on different banks) and were not able to receive anything. Any help/advise would be appreciated. We used the Boca Raton & Palm Beach County info.

Agreed. But, please remember that Blow Code is a morse bigot.
He (or she) is representative of only a minority of United
States radio amateurs. When the major accomplishment in life
of such morse bigots has been morsemanship, they will naturally
trumpet that singular skill and attempt to moralize it as some
kind of positive attribute that one MUST have.

>Here in Canada, a no-code license requires
>MORE technical skill than a code license. In other words, here in
>Canada you need to learn MORE to pass a no-code license since learning
>code is a motor skill, not a technical one.

I applaud Industry Canada's decision on their regulations.
My contact with Canadian regulations has been minimal but
their website on radio regulations explained it all. Blow
Code is confused on the task of the United States FCC in
regulating ALL US civil radio; our FCC is not a booster
organization for amateur radio or any other radio service
here. The FCC only "wants" radio service users to obey the
regulations.

Manual radiotelegraphy skill testing for an amateur radio license has existed since the first US radio regulating agency and was maintained mostly out of inertia and the insistence of the ARRL (once it had risen above its competition) through lobbying the FCC. Given the vast scope of today's radio services, the FCC has a far greater task to keep up with its regulatory task. Amateur radio here is low on the regulatory task list of the FCC.

Manual telegraphy IS a motor skill (more correct "psycho-motor" skill) but morse bigots become more psycho about their personal skills, equating it to intellectual knowledge and the ability to reason. Morse bigots see only their kind and want to destroy those who think differently; that is security for their "tribe."

>>You people don't want knowledgable hams anymore.
>
>Learning code does not impart any type of "knowledge" any more than
>learning roller skating.

^^ [an example of the morse bigot and their confusion over psycho-motor skills versus intellectual knowledge]

>>CB'ers dont have to learn CW, are they better?
>
>Based on the CBers I used to hear on the higher sideband channels, I
>heard very little of the insults I have seen here spewed by some of
>the pro-coders. Therefore, I'd say that they were at least better
>behaved than the aforementioned pro-coders.

The gratuitous insults to Citizens Band Radio Service users has been in existance since 1958 when the USA authorized its use here (as 'Class D' CB on only 23 27 MHz band channels). That's a time span of 48 years.

From its inception CB has NEVER required ANY testing to obtain a CB license. The "license" was pro-forma, a slight revision of the Restricted Class of Radio-telephone Operator license then common to services such as both private and civil aviation pilots.

Nearly a half century ago, US radio amateurs developed a distaste for the US government and these new radio service users for: (1) "Taking away" their 11 meter band (little used, sitting below the largest amateur radio allocation on HF); having the audacity in NOT requiring any testing plus intolerant bitching over NOT having to pass any morse code test. That almost-hatred developed into the bigotry seen today.

The bigotry grew when about a decade after authorization the offshore electronics industries hit the US market with less-expensive CB transceivers and long-haul truckers

took to that service. CB users here soon out-numbered radio amateurs by a large margin. With such a huge base of users, a common patois/lingo/jargon grew that was NOT related to amateur radio but had roots in our state highway patrol police organizations. That lingo became quite different than amateurs' use of theirs, so that reinforced the "different-destroy" attitude of the amateurs' bigotry against CB users. Amateurs like to make fun of CB lingo but don't realize their jargon is amusing to other HF radio service users and the military radio. Amateurs tend to think of themselves as first and foremost without realizing that they never were first nor foremost and were always a minority in radio.

>Yes, there were assholes on CB, but CB didn't make them that way. By
>the same token, learning code will not turn an asshole into a nice
>guy.

Morse bigots have the egotistical self-definition of THEIR skills being the only "true" ones for amateur radio. They will rationalize that self-righteous attitude with any number of archaic "reasons" that defy validity for regulatory purposes by radio regulating agencies. In last year's Notice of Proposed Rule Making (NPRM) on the elimination of morse code testing for US radio amateurs, several Commenters cited the ability to "thwart terrorism" by using morse code! :-) Apparently they had taken a Hollywood motion picture fictional depiction of aliens-from-outer-space-invasion as a documentary of a real event [film title was "Independence Day"]!

>CB is just a ham radio in the embryo stage, a zygote. The only
>real difference between CB and ham is the choices of bands and the
>power of the transmitter, when you really look at things in the most
>basic sense.

I see it differently. Human beings like to communicate. That is evident in the enormous growth of cellular telephony and daily use of that; the US Census Bureau stated two years ago the one in three Americans had a cell phone subscription. That is roughly 100 million users of those tiny full-duplex radio transceivers. Several million CB users exist on USA highways (exact figures unknown as CB has been unlicensed for years, but can be approximated from EIA - Electronic Industry Association - statistics on manufactured and imported electronic equipment). FRS and GMRS unlicensed UHF HTs may exceed the million mark by now. In the maritime radio service private boat owners' VHF radios exceed that of commercial ship owners, VHF voice required on

inland waterways and harbors for traffic control.
Private boat owners are increasing their HF radio use
on deep-water travels unsing HF SSB voice (a few radios
marketed for sales to both them and radio amateurs).

CB is 48 years old, hardly a youngster/child/teener.
It is DIFFERENT than amateur radio on HF, therefore
abhored by some radio amateurs stuck in their radio
bigotry attitudes put there long ago by their
ancestors. If truck drivers have spread a DIFFERENT
lingo on CB radio, then they did so out of THEIR need
to communicate about THEIR things, not some self-
righteous and not-required-by-regulation "traditional"
lingo used by hams. Amateurs don't/can't speak to
others on HF and are restricted (in the USA) to
"non-essential" communications (paraphrased from US
regulations). Truck drivers CAN and DO communicate
with others on and off the highways freely and with
much less of the bigotry displayed by some radio
amateurs looking for someone to destroy.

Where does manual radiotelegraphy fit into this?
It doesn't.

There are two ways to communicate when all you have is a transceiver, phone, & CW. All you need for phone is a microphone, All you need for CW is a pencil and paper. If you had to build a transmitter in an emergency, a CW transmitter is simpliest to build. We are after all technical aren't we? We're not just appliance operators.

Eliminating CW removes a way we can communicate. A simple way, where all that's required is an ear, a pencil, and paper, and a skill.

>There are two ways to communicate when all you have is a transceiver,
>phone, & CW.

WRONG, WRONG, WRONG...

It is voice, radiotelegraphy, data, pulse, right off the bat,
plus a few others which you have NO idea they existed for
EMERGENCIES.

Blowcode, you are stuck on HF ham thinking. So were some
other morse zealots and morse bigots in this forum many
years ago. Their scenarios were invalid comic-book stuff
then and now you've just repeated the same. Deja phooey.

On HF you can find some EMERGENCY calling frequencies...but
those aren't on ham bands. I recall only two, one for
maritime, one for civil aviation over-ocean routes. Aviation
has some more but you aren't worth the time to go look them
up in the huge Part 2 regulations of Title 47 C.F.R. Both
are VOICE.

Over or near land the aviation VHF frequency is 121.5 MHz.
Military aviation is 243 MHz. Both are VOICE. Airborne
transponders (those are transmitter-receivers) has a
"squawk" code just for emergencies and, in a pinch, you
can push the IDENT button. Transponder output will auto-
matically show up on ATCRBS radar displays. The little
HTs in military parachute backpacks can do both VOICE
and DME/TACAN (the 'pulse' I mentioned). [you probably
don't know what DME or TACAN are yet they've been around
for a half century.

On waterways (not open ocean) there are VHF frequencies
for EMERGENCIES. VOICE. Go look those up in Part 2.
VHF VOICE is used in the USA in harbors and inland
waterways. Need EMERGENCY frequencies on land? Plenty
of those, band specific, organization specific, freqs
available if you are serious about having to use them.
Those frequencies are kept open 24/7 in most areas and
have emergency power backup. Three major land PLMRS

bands, can you name them? [I didn't think so]

Ever hear of a cellular telephone? By now, I'll bet you
noticed them. One in three Americans have one. Little
1 GHz HTs with lots of added features with tens of
thousands of cell sites to connect to telco. You can
punch up nine-one-one on them same as a wireline phone.
Nine-one-one is operated 24/7, done by professionals.
Cell sites and telephone exchanges all have "floating"
emergency power, can remain operating on AC power outage.

Think you can call for a paramedic with your little "CW"
transceiver, Blowcode? Or a fire truck? Police car?
Sorry, Blowcode, they use VOICE and above 30 MHz.
Some paramedic ambulances have EKG instruments with
radio coupling to a hospital. Some police departments
have data terminals IN their cars (LAPD does as do
many adjacent incorporated cities here).

>All you need for phone is a microphone, All you need for CW
>is a pencil and paper.

BWAAAAAHAAAA!!!!! How are you on "straight wire CW"
Blowcode? Can you do 'twenty' just rubbing two bare
wires together? [remember, you have to scrape OFF
the insulation to make contact...]

>If you had to build a transmitter in an emergency,
>a CW transmitter is simpliest to build.

!!!BUILD?!?!?!??? BWAAAAHAHAHAHAHAH!!!!!!!!!!!

Is your QST featuring the "Tuna Tin Two" handy and able
to survive a full EMERGENCY environment? Do you have
the parts? Do you have a power-less soldering iron?
Do you know how to use hand tools? [I don't think so]

Once you've cobbled together something that MIGHT work,
HOW DO YOU KNOW? Did you have test equipment that
survived the EMERGENCY, Blowcode? [I'll bet you think
so] How do you know you're on a frequency that you
think is good for emergencies? You do "laying on of
hands" to miraculously make it work? In this (unspecified)
EMERGENCY do you have two functioning hands to use the
tools to 'make' this thing? Will you need AC power
to run it? Will it work on DC? From where will the
electrical power come from? Rub two Handbooks together?
Cobbling together a one-tube transmitter MIGHT be
possible, provided you have plans, the parts, a
suitable tube, and the right values of components
(which you seem to think you 'know' exactly?. It might
take 24 hours or so...at which time the "emergency"
would be over and the 'emergency' victims might be

long dead.

You can spout bullshit bragging only so far. You've
gone too far, Blowcode. You DEMONSTRATE that you can
cobble together a simple 'transmitter' out of a pile
of parts which do NOT know of ahead of time. SHOW US
or someone. Put your money where your big mouth is.

Here's what the right-thinking folks do: Have a radio
or radios ALREADY available for emergencies, along with
a power source, on some 'emergency frequency' that you
KNOW WILL BE HEARD. The "CW-saves-the-day" scenario is
BS that went out before the GMDSS was activated seven
years ago; the USCG is NOT monitoring the 500 KHz "CW"
frequency and neither are many other equivalent national
maritime aid agencies. A few years ago a gal teenager
picked up a call for help on an FRS HT from a stranded
mountain climbing team...voice, not "CW", miles away.
Made the Washington and Oregon newspapers. [FRS isn't
on ham bands, Blowcode, and the gal wasn't a "radio op"]

>We are after all technical aren't we?

You (sure as hell) sound like you can barely wire up
a doorbell. With a QST article on it to show you how.

>We're not just appliance operators.

Right...in addition you are an unthinking nuisance.

>Eliminating CW removes a way we can communicate.

Eliminating a code test does NOT "remove its use."

If morsemanship is so damn good, it DOESN'T NEED
TESTING. Folks will take to it without needing to be
tested if its such a wonderful thing.

>A simple way, where all
>that's required is an ear, a pencil, and paper, and a skill.

Blowcode, you need a SKULL more than a skill...one
with a working brain inside it. Try to get a new brain. Quickly.

Now go back to reading those comic books from the ARRL.
You know, the "Archie" ones that you saved up long ago.

Newsflash: ALL radio operators, code or no-code, are "appliance
operators" as you colloquially state. A radio is a means to
communicate. Knowing code just adds another way to use that radio.

Quite true, Opus! Thank you for pointing that out.

Let us hope that Blowcode sticks to his ARRL "Archie" comic
books while he mimes the "Wizard of Oz's" scarecrow wishing
he had a brain. :-(

Build a transmitter? I could humiliate you there, but that's been done
already.

>Eliminating CW removes a way we can communicate. A simple way, where all
>that's required is an ear, a pencil, and paper, and a skill.

There is NOTHING about removing code testing that will stop you from
using code. Wanna use code? Go ahead, knock yourself out. You can
hammer on that key all night long, for all anybody cares. Hammer on it
in your sleep. Hammer on it in the shower.

Just don't tell me that I am a bad person if I don't.

Even if the no-code ticket was made 6 months or 2 years
in active length it would not matter one bit. Amateur radio
in the public eye is unknown and your average young person
is far more interested in the Internet, online video, instant text
messaging and cellphones. There are too many commercially
available technologies, which are far cheaper I may add, than
amateur radio which while a curosity is still a functionally and
technologically obsolete pursuit. Sorry but that's the truth.

The 9/11 terrorist attack on America which left almost 3,000 people dead was an "inside job", according to a group of leading academics.

Around 75 top professors and leading scientists believe the attacks were puppeteered by war mongers in the White House to justify the invasion and the occupation of oil-rich Arab countries.

The claims have caused outrage and anger in the US which marks the fifth anniversary of the terrorist attacks on Monday.

But leading scientists say the facts of their investigations cannot be ignored and say they have evidence that points to one of the biggest conspiracies ever perpetrated. Professor Steven Jones, who lectures in physics at the Brigham Young University in Utah, says the official version of events is the biggest and most evil cover up in history.

He has joined the 9/11 Scholars for Truth whose membership includes up to 75 leading scientists and experts from universities across the US.

Prof Jones said: "We don't believe that 19 hijackers and a few others in a cave in Afghanistan pulled this off acting alone.

"We challenge this official conspiracy theory and, by God, we're going to get to the bottom of this."

They believe a group of US neo-conservatives called the Project for a New American Century, set on US world dominance, orchestrated the 9/11 attacks as an excuse to hit Iraq, Afghanistan and later Iran.

You've seen the photos of the survivors standing in the impact holes on the side of the tower begging for help. How could they do that if the temperatures were hot enough to 'melt steel'?

The entire structure does not have to melt - just enough key
components.

For a physics professor he sure seems to ignore a lot of concepts such
as momentum, torque, leverage and conservation of energy...

In article <1157718712.421116.182710@m79g2000cwm.googlegroups.com>,
landnotloans@hotmail.com smoked some really BAD dope, beamed down from
the Mothership, spotted a Sasquatch, dodged a Chupacabra's claws,
sniffed a whole lot of "chemtrails," foamed at the mouth, howled at the
Moon and bloviated :

> The 9/11 terrorist attack on America which left almost 3,000 people
> dead was an "inside job", according to a group of leading academics.
>
> Around 75 top professors and leading scientists believe the attacks
> were puppeteered by war mongers in the White House to justify the
> invasion and the occupation of oil-rich Arab countries.

"Top professors"???? NONE of them has experience in relevant fields:
aviation, structures, demolition, operations, covert ops, etc.

> The claims have caused outrage and anger in the US which marks the
> fifth anniversary of the terrorist attacks on Monday.
>
> But leading scientists say the facts of their investigations cannot be
> ignored and say they have evidence that points to one of the biggest
> conspiracies ever perpetrated. Professor Steven Jones, who lectures in
> physics at the Brigham Young University in Utah, says the official
> version of events is the biggest and most evil cover up in history.

"Leading scientists"??? Experts in the appropriate fields support the
NIST explanations -- NOT those of Jones, et. al! Jones' field of
expertise are: cold fusion, the journeys of Jesus Christ through the
Americas. He has zero experience in structures or anything else relevant
to the subject.

Jones and co. are making a lot of money selling lectures, books and
videos to the ignorant, the galactically stupid, the gullible and the
malicious.

> He has joined the 9/11 Scholars for Truth whose membership includes up
> to 75 leading scientists and experts from universities across the US.

Because at the point where the picture is taken, the fires were not yet hot enough. Either Discovery Channel or A&E (I can't remember which) had a program where they built duplicates of the offices including furniture, computers, etc., then threw in Jet A and set them on fire. The Jet A along with all the burning plastic easily got hot enough to reach temperatures that cause the type of steel used in the WTC to loose something like 80% of it's strength. Very interesting show.

Steve Jones Is Certifiable Loon, and anyone who knows him will state so,
in just those words. He isn't a Structural Enginee., He isn't an
Energetic Materials Science Chemist. He has no experience with explosives
in any way, shape or form. He is a Physics Professor with dubious
Publication History, looking to make a 'Big Splash" in the media.
When will these folks just blow away with their own Hot Air......

I thought it was strange that this guy was a physics professor. What
would a physics prof know about how the towers fell? That's the realm
of engineering. A physics prof would start the problem with "ok, assume
a zero gravity, zero atmophere environment..." ;)

It appears you only have to cause one floor to drop in that type of building to bring it down. On the History Channel they have a program called Engineering Disasters, and in one of the shows they addressed that very issue. They had actual films of a building that fell during construction in just the way the WTC fell. After much testing they found that rebar had been placed 1/2 inch off from where it was supposed to be in the floor. As the building got taller there was enough weight placed on a lower floor and it failed. The building went straight down, just like the WTC, killing a bunch of workers. All this because of some rebar in the wrong place.

Sounds like (more or less) they're describing
the pancaking of L'Ambiance Plaza in
Bridgeport, Ct., back in (clickety click) 1987

(and even if they're not, it's a good read...)

short version: the building was a "lift slab"
structure, where the floors were built up
at ground level, then lifted by crane to
their destination height, and attached to
the columns. First would be the top floor,
then (top -1), (top -2), rinse, lather, repeat.

One of the upper floors came loose, fell down, and
the rest joined up.

A couple of cites:
http://www.pubs.asce.org/WWWdisplay.cgi?9204513

http://www.fire.nist.gov/bfrlpubs/build94/PDF/b94023.pdf (pdf)

and, for good measure:

http://911research.wtc7.net/wtc/analysis/compare/lambiance.html

(note that the last includes some commentary which
is full of [expletive deleted], such as the claim that
"The rubble of the L'Ambiance Plaza building contained
clearly recognizable stacks of floor slabs, contrasting
with the striking absence of a single photograph showing
a piece of floor slab or even steel truss at Ground Zero...)

Great links, thanks. I do think the building they had on the film was in Florida, but I seem to remember them saying the name L'Ambiance Plaza when talking about other building that had fallen. There was a guy doing a video tape during the construction so you got to see it come down.

Although it is hard to tell from the photos shown, it sure looks like there were pieces of floor slab in some of them.

Nothing had to melt, just get hot enough to lose strength and yield.
With steel, this occurs well below the melting point. Hasn't anyone

And ignores common sense as well.

Matt

The following letter was sent today by Kevin Ryan of Underwriters Laboratories to Frank Gayle of the National Institute of Standards and Technology (NIST) . Underwriters Laboratories is the company that certified the steel components used in the construction of the World Trade Center towers. The information in this letter is of great importance.

Dr. Gayle,

Having recently reviewed your team's report of 10/19/04, I felt the need to contact you directly.

As I'm sure you know, the company I work for certified the steel components used in the construction of the WTC buildings. [..]

We know that the steel components were certified to ASTM E119. The time temperature curves for this standard require the samples to be exposed to temperatures around 2000F for several hours. And as we all agree, the steel applied met those specifications. Additionally, I think we can all agree that even un-fireproofed steel will not melt until reaching red-hot temperatures of nearly 3000F (2). Why Dr. Brown would imply that 2000F would melt the high-grade steel used in those buildings makes no sense at all. [..]

This story just does not add up. If steel from those buildings did soften or melt, I'm sure we can all agree that this was certainly not due to jet fuel fires of any kind, let alone the briefly burning fires in those towers. That fact should be of great concern to all Americans.

1st Responder Wireless News (1RWN), already very active, and recognized by most media outlets and Public Safety Officials as the "Industry Leader" in most of the East Coast States, is actively looking for News Correspondents to become active as Incident Dispatchers for your area.

1st Responder Wireless News, a subsidiary company of 1st Responder News, is now consider the leader in the emergency notification industry, sending incident alerts to pagers, cell phones and e-mails.

We are now active in AL, AZ, CA, CO, CT, DC, DE, FL, GA, HI, IL, IN, KY, LA, MA, MD, ME, MO, MS, NC, NH, NJ, NM, NV, NY, OH, OR, PA, RI, SC, TN, TX, VA, VI, VT, WA, WV and Canada. 1RWN has already acquired many well known Paging Notification Services including TAC-9 Paging, East Coast Paging, Ohio Fire News, Maryland Fire Network, Virginia Fire Net, Toronto Fire Net, Metro Fire Paging and the National Incident News Network (NINN), with several additional under negotiations. This is a very exciting time to become involved.

1RWN sends instant notifications for any newsworthy Police, Fire, Rescue, Traffic, Weather and Breaking News event within our coverage areas, to pagers, e-mail, cell phones, PDAs and to our online streaming tickers. The vast majority of our Dispatch Staff is comprised of Volunteer and Career Firefighters, Police/Sheriff Officers, Haz-Mat & Rescue Technicians, 911/ALS/Medevac Dispatchers, ALS, BLS & OEM Personnel and Skywarn Spotters, on local, county, state and federal levels.

1RWN is in the final stages of development of our Dispatcher Rewards Program which will allow our Dispatchers to log into an online store and buy products ranging from cameras to antenna to two-way radios using points they've earned by being active on our system! EVERY Dispatcher on our system will now reap rewards for their hard work, dedication and loyalty!

1RWN has also recently gone live with the industry's MOST COMPREHENSIVE Customer Interface selection process which allows our Subscribers to select EXACTLY what information they want to receive, from what areas and to what devices. In other words, you can select to receive JUST building collapse incidents in Yonkers to be sent to your cell phone, with bridge closures in Philadelphia being sent to your pager. You are no longer restricted to receiving ALL alerts from a region, now YOU decide what you receive from the average 16,000 monthly alerts sent from any of the areas we cover - 37 States, Washington DC, or Canada! EVERY active 1RWN Dispatcher qualifies for complimentary service!

If you are interested, or would like more information, please check out the website at www.1RWN.com and/or e-mail Scott@1RWN.com.

Why settle for the rest...when you can be with the best?

NY Fire Department Chief of Safety stated there were "bombs" and
"secondary devices", which caused the explosions in the buildings
VIDEO: http://terrorize.dk/911/witnesses/911.wtc.reporter.1.wmv

NYC firefighters who witnessed attacks stated that it looked like there
were bombs in the buildings
http://www.letsroll911.org/discussion_in_firehouse.mpg

NYC firefighter stated "On the last trip up a bomb went off. We think
there was bombs set in the building"
http://web.archive.org/web/20010914230246/http://people.aol.com/people/special/0,11859,174
592-3,00.html

NYC firefighter stated there was a "bomb in the building ... start
clearing out"
http://video.google.com/videoplay?docid=-4574366633014832928&q=9%2F11+bomb

NYC firefighter stated "the south tower . . . exploded . . . At that
point a debate began to rage because the perception was that the
building looked like it had been taken out with charges . . . many
people had felt that possibly explosives had taken out 2 World Trade"
http://a1022.g.akamai.net/f/1022/8160/1d/www.newsday.com/includes/fdny-9-11/pdf/9110295.pd
f

Assistant Fire Commissioner stated "I thought . . . before . . . No.
2 came down, that I saw low-level flashes. . . . I . . . saw a flash
flash flash . . . [at] the lower level of the building [not up where
the fire was]. You know like when they . . . blow up a building ... ?"
-- and a lieutenant firefighter the Commissioner spoke with
independently verified the flashes
http://www.nytimes.com/packages/html/nyregion/20050812_WTC_GRAPHIC/Gregory_Stephen.txt

A firefighter said "[T]here was just an explosion. It seemed like on
television [when] they blow up these buildings. It seemed like it was
going all the way around like a belt, all these explosions."
http://www.nytimes.com/packages/html/nyregion/20050812_WTC_GRAPHIC/Banaciski_Richard.txt

Another firefighter stated "it almost sounded like bombs going off,
like boom, boom, boom, like seven or eight"
http://66.102.7.104/search?q=cache:T2ldEwVAu18J:abclocal.go.com/images/wabc/2005/TurilliTh
omas_firefighter.pdf+%22Thomas+Turilli%22+%22%E2%80%9Cit+almost%22&hl=en&client=firefox-a

Paramedic said "at first I thought it was -- do you ever see
professional demolition where they set the charges on certain floors
and then you hear pop pop pop pop pop -- thats exactly what because
thought it was"
http://a1022.g.akamai.net/f/1022/8160/1d/www.newsday.com/includes/fdny-9-11/pdf/9110035.pd
f

Police officer noted "People were saying, 'There's another one and
another one.' I heard reports of secondary bomb explosions . . ."
http://www.thememoryhole.org/911/pa-transcripts/pa-police-reports01.pdf

Firefighter stated "there was an explosion in the south tower, which .
. . just blew out in flames . . . One floor under another after another
and when it hit about the fifth floor, I figured it was a bomb, because
it looked like a synchronized deliberate kind of thing. I was there in
'93"
http://graphics8.nytimes.com/packages/pdf/nyregion/20050812_WTC_GRAPHIC/9110290.PDF

A firefighter stated "it looked like sparkling around one specific
layer of the building . . . Then the building started to come down. My
initial reaction was that this was exactly the way it looks when they
show you those implosions on TV."
http://www.nytimes.com/packages/html/nyregion/20050812_WTC_GRAPHIC/Fitzpatrick_Tom.txt

Officer in the New Jersey Fire Police Department who was previously a
sergeant in the U.S. Army, said about the south tower: "[I]t sounded
like bombs going off. That's when the explosions happened. . . . I knew
something was going to happen. . . . It started to get dark, then all
of a sudden there was this massive explosion." Then, discussing her
experiences during the collapse of the north tower, she said: "[There
was] another explosion. That sent me and the two firefighters down the
stairs. . . . I can't tell you how many times I got banged around. Each
one of those explosions picked me up and threw me. . . . There was
another explosion, and I got thrown with two firefighters out onto the
street."
http://www.amazon.com/gp/product/0028644220/002-7168646-8424844?v=glance&n=283155

A facilities manager in the north tower "was convinced that there were
bombs planted all over the place and someone was sitting at a control
panel pushing detonator buttons"
http://www.thememoryhole.org/911/veliz-bombs.htm

A police report states World Trade Center "Police Desk reporting an
explosion on the lower level" 8 minutes after plane crash (page 17,
which is page 2 of the Chronological Report of the WTC Radio
Transmissions on 9/11/01)
http://www.thememoryhole.org/911/pa-transcripts/pa-police-reports01.pdf

NYC firefighter stated "It actually gave at a lower floor, not the
floor where the plane hit. . . [W]e originally had thought there was
like an internal detonation, explosives, because it went in succession,
boom, boom, boom, boom, and then the tower came down."
http://www.nytimes.com/packages/html/nyregion/20050812_WTC_GRAPHIC/Cachia_Edward.txt

Firefighter states "this, huge incredible force of wind and debris actually came UP the stairs, knocked my helmet off, knocked me to the ground"
http://terrorize.dk/911/witnesses/911.wtc.debris.up.the.stairs.wmv

Similarly, employee of an insurance company in south tower heard an explosion from BELOW the impact of the airplane, an "exploding sound" shook the building, a tornado of hot air, smoke and ceiling tiles and bits of drywall came flying UP the stairwell, and the wall split from the bottom UP
http://www.csmonitor.com/2001/0917/p1s1-usgn.html

Firefighter said "I was distracted by a large explosion from the south tower and it seemed like fire was shooting out a couple of hundred feet in each direction, then all of a sudden the top of the tower started coming down in a pancake . . . It appeared somewhere below [the area where the plane had hit]. Maybe twenty floors below the impact area of the plane"
http://a1022.g.akamai.net/f/1022/8160/1d/www.newsday.com/includes/fdny-9-11/pdf/9110288.pdf

That story line of it "not" being the planes that brought the towers down, is one of the BIGGEST bull shit stories ever to be printed.

IF you "watched" the towers fall, they fell from top to bottom. Straight down (just about). IF there were "Dynamite" used - especially at the ground floors, they would have went out first - and THAT WAS NOT THE CASE. ALSO - you would most likely have seen implosions or adversely - walls "shattering" "OUT" depending on how the charges were placed. That ALSO was not the case. IF you recall, the FIRST attempt to bring the towers down WAS done with "Explosives" placed in the garage area. Yes, it caused damage and some injuries/deaths but as to bringing the towers down - It didn't work.

You bull shit conspiracy theorists really need to get a grip on life. THAT was a fucking attack on our country - pure and simple. OR "maybe" YOU were a part of it! Trying to spin it out of the real truth!

L.

"Lucky" Larry Silverstein

Larry Silverstein is the New York property tycoon who purchased the entire WTC complex just 6 months prior to the 9/11 attacks. That was the first time in its 33-year history the complex had EVER changed ownership.

Mr. Silverstein's first order of business as the new owner was to change the company responsible for the security of the complex. The new security company he hired was Securacom (now Stratasec). George W. Bush's brother, Marvin Bush, was on its board of directors, and Marvin's cousin, Wirt Walker III, was its CEO. According to public records, not only did Securacom provide electronic security for the World Trade Center, it also covered Dulles International Airport and United Airlines - two key players in the 9/11 attacks.

The company was backed by an investment firm, the Kuwait-American Corp., also linked for many years to the Bush family. KuwAm has been linked to the Bush family financially since the Gulf War. One of its principals and a member of the Kuwaiti royal family, Mishal Yousef Saud al Sabah, served on the board of Stratesec.

Now, consider: The members of a small cabal owned the WTC complex, controlled its electronic security, and also controlled the security not only for one of the airlines whose aircraft were hijacked on 9/11, but the airport from which they originated.

Another little "coincidence" -- Mr. Silversten, who made a down-payment of $124 million on this $3.2 billion complex, promptly insured it for $7 Billion. Not only that, he covered the complex against "terrorist attacks".

Following the attacks, Silverstein filed TWO insurance claims for the maximum amount of the policy ($7B), based on the two -- in Silverstein's view -- separate attacks. The insurance company, Swiss Re, paid Mr. Silverstein $4.6 Billion - a princely return on a relatively paltry investment of $124 million.

There's more. You see, the World Trade Towers were not the real estate plum we are led to believe. From an economic standpoint, the trade center -- subsidized since its inception by the NY Port Authority -- has never functioned, nor was it intended to function, unprotected in the rough-and-tumble real estate marketplace. How could Silverstein Group have been ignorant of this?

The towers required some $200 million in renovations and improvements, most of which related to removal and replacement of building materials declared to be health hazards in the years since the towers were built. It was well-known by the city of New York that the WTC was an asbestos bombshell. For years, the Port Authority treated the building like an aging dinosaur, attempting on several occasions to get permits to demolish the building for liability reasons, but being turned down due the known asbestos problem. Further, it was well-known the only reason the building was still standing until 9/11 was because it was too costly to disassemble the twin towers floor by floor since the Port Authority was prohibited legally from demolishing the buildings.

The projected cost to disassemble the towers: $15 Billion. Just the scaffolding for the operation was estimated at $2.4 Billion!

In other words, the Twin Towers were condemned structures. How convenient that an unexpected "terrorist" attack demolished the buildings completely.

WTC Building 7 was a part of the WTC complex, and covered under the same insurance policy. This 47-storey steel-framed structure, which was NOT struck by an aircraft, mysteriously collapsed 8 hours later that same day into its own footprint at freefall speed - exactly in the manner of the Twin Towers.

How could this have happened? Mr. Silverstein gave the world the answer when he slipped up during a PBS television interview a year later, on 9/11/2002:

"I remember getting a call from the...er...fire department commander, telling me that they were not sure they were gonna be able to contain the fire, and I said, 'We've had such terrible loss of life, maybe the smartest thing to do is pull it.' And they made that decision to pull and we watched the building collapse."

As anyone who knows anything about construction can tell you, "Pull" is common industry jargon for a controlled demolition.

One thing is for sure, the decision to 'pull' WTC 7 would have delighted many people. Especially because it has been reported that thousands of sensitive files relating to some of the biggest financial scams in history - including Enron and WorldCom -- were stored in the offices of some of the building's tenants:

* US Secret Service
* NSA
* CIA

The Securities and Exchange Commission has not quantified the number of active cases in which substantial files were destroyed by the collapse of WTC 7. Reuters news service and the Los Angeles Times published reports estimating them at 3,000 to 4,000. They include the agency's major inquiry into the manner in which investment banks divvied up hot shares of initial public offerings during the high-tech boom. ..."Ongoing investigations at the New York SEC will be dramatically affected because so much of their work is paper-intensive," said Max Berger of New York's Bernstein Litowitz Berger & Grossmann. "This is a disaster for these cases."

Citigroup says some information that the committee is seeking [about WorldCom] was destroyed in the Sept. 11 terror attack on the World Trade Center. Salomon had offices in 7 World Trade Center. The bank says that back-up tapes of corporate emails from September 1998 through December 2000 were stored at the building and destroyed in the attack.

Inside WTC 7 was the US Secret Service's largest field office with more than 200 employees. "All the evidence that we stored at 7 World Trade, in all our cases, went down with the building," according to US Secret Service Special Agent David Curran.

What a neat, complete, and fortuitous turn of events was 9/11.

Incidentally, it's worth noting that one of Lucky Larry's closest friends - a person with whom it's said he speaks almost daily by phone - is none other than former Israeli Prime Minister Benjamin Netanyahu.

More on that cozy little relationship later...

They started out with a story that it was "thermate" that brought them
down. When they found out that there is no such thing as "thermate,"
they switched the story to thermite. Now it is dynamite! If braind were
dynamite, the collective "9/11 'Truth' Movement" wouldn't ahve enough to
blow their noses!

I recently was in an exchange with someone who didn't keep track of his
responses.

One of his last responses to me was to say that the "explosions" could have
been every ten floors and that "They" were sloppy.
One of his last posts to another person had him saying "They" had to wire
every floor with great precision.
I quoted his response to me in that thread and he went away.

The question that popped into my mind during that exchange was "Why bother
with airplanes?"

If they could wire two they could wire two hundred. Blow up a couple, tell
the world of the other 198 then blow one a week or one every time a search
crew went in.

The recent fear of water and toothpaste (but you can carry on KY-jelly) on
planes led me to another way to bring excitement onto an airplane.

Isn't it amazing how you can have an event like 911 on tape and people can
view the tape and deny the evidence of their own eyes?
We all SAW the planes hit the towers.
We all SAW the towers fall from the TOP down.
Many of us saw all this in person, not on tape.
The only conclusion I can draw is that some people are just idiots.

They need their ass kicked for even remotely trying to make humor of it in
any manner - be it joking or trying to twist it around in this sick manner.
Now "that" would be a lovely conclusion.

4395. Radio Shack Employee Portal (Policy and Benefits Handbooks)

Newsgroup: rec.radio.scanner
Date: 2006-09-09 04:55:34 UTC
From: BuddahMOO <heatherpanek@gmail.com>
Message-ID: <1157777734.519060.132270@p79g2000cwp.googlegroups.com>
Source record: 6274

I'm a Radio Shack employee (Sprint Kisok) and have noticed quite a few Radio Shack postings in this user group. I am trying to determine how to access (if possible) Radio Shack's intranet portal from my home PC, but haven't been able to get the URL link from my boss. Does anyone here happen to know how I can go about accessing the intranet from a internet location??? At my old company we were able to do this, but we needed to know the specific portal URL.

Specifically, I am trying to access the employee policy and employee benefits handbooks, as I have never had these provided to me.

Thanks in advance for your help.

Are you really so ignorant, as to ask that question? I hope not!

Doh, perhaps the fire was only at it's hottest in less than a dozen of the
over 100 floors? Once those floors collapsed, the additional weight of
these floors could not be supported by the floors beneath them.

Ever watch those documentaries on building implosions? Notice how they spend weeks removing fixtures, walls, etc.? And then drilling holes in supports and walls to hold the explosives? There's a lot of work leading up to the big event. Wouldn't someone have noticed all that going on in the weeks before 9/11? I know there has been a lot of discussion about not "connecting the dots" but surely someone would have noticed that. And what about hauling in all the tons of dynamite? Wouldn't someone have noticed that and said something? "Hey, did someone see a big cockroach upstairs or something?"

agreed!

btw, in the video, they highlight a "plume" of material ejecting from a
lower floor window below the start of the collapse and claim it was from an
explosion.

well, there was an explosion of sorts. its called compression. The air had
to exit somewhere, hence that debris plume. no dynamite needed!

Are you accusing me of getting some sort of sick satisfaction from dragging out 9-11 when I know families are the victims are bound to read it at some point? Fuck you, what's in it for me, I'm relaying information the mass media won't. Go switch on the TV and shut up you fucking idiot.

Building 7 - never hit by a plane but it collapsed!
http://www.youtube.com/watch?v=jPDNPJAr_Ao

No steel framed building has ever collapsed by fire EVER! The owner of the WTC, who took billions in insurance for the 9-11 attacks on the compund he bought 6 months earlier said on TV the fire service 'pulled the building and you have seen Building 7 falling straight all the way down like a demolition. It takes 2 weeks to wire a building for demolition, so how did invisible men manage it in 7 hours with the entire Manhatten emergency service population in the vacinity?

Then WHY are you perpetuating this stupid shit if YOU YOURSELF do not
believe it? MOST ANYONE WITH A BRAIN KNOWS IT ISN'T TRUE. TO RELAY A RUMOR -
IS BEING PART OF IT. YOU ARE THE IDIOT FOR PLAYING INTO THE SHIT.

Did you EVER think the MASS MEDIA "ISN'T" BROADCASTING THIS SHIT "BECAUSE"
THEY KNOW TOO WELL IT IS BULL SHIT???? WAKE THE FUCK UP.

Your lame ass excuse below is NOT sufficient reason to be perpetuating BULL SHIT. There is NO REASONABLE explanation for continuing that BULL SHIT story - regardless your claims. So YOU are the "fucking idiot" for choosing to place yourself in as a part of it - even in "spreading" it. "YOU" helping to spread the bull shit is just as much a slap in the face of all who suffered in what ever manner.

YES - by continuing to pass it along - YOU ARE getting sick satisfaction by trying to prove your own sick point. Obviously you MUST believe it to pass it on. MOST anyone would say that is bull shit and let it drop at that - case closed. And as I said in another post - if you do NOT believe it, then why perpetuate it? You dumb asses who do this shit - are so full of it, you have no clue..... hell, even the stories don't hold up, they change. That in itself spells BULL SHIT. If YOU aren't smart enough to figure that out - then YOU are the fucking idiot - not me. And I'm sure many in here would agree with that.

Maybe you're just trying to get your 15 minutes of fame trying to make your case, I don't know - but you FAILED. All you did was bring up bad memories and make yourself out to be a real ASS HOLE. IF YOU DO NOT believe in your heart the crap you're spreading - then leave this crap die - don't keep trying to push it. THAT would prove you do NOT believe it. Your words below - are NOT an apology for bringing this up and even at at that - you seem to still try to push the point in doing so. HOW LAME.

Also, you didn't seem to send anything along with it to SHOW that you didn't believe it! You could have said something to the effect of - "here is what I found - <provided the link(s)> - and said - UNBELIEVABLE. Hows that for a bunch of crap?" Just to let people know what was out there and let them debate it IF they chose. Maybe that was your "intention". BUT your "method" tends to lean in the direction of you "believing' it. YOU are the one who made the post - NOT ME. BLAME YOURSELF for the image you portrayed. IF I say something stupid on line - and I have - then that makes me the fool and I must face up to it and in the past - I have - including personal apologies (takes a real man to do that). BUT THIS BABY IS YOUR DOING. WE ARE ONLY CALLING YOU ON YOUR OWN WORDS AND WHAT SEEMS TO BE YOUR APPARENT BELIEFS.

Since you didn't include a reference to whom you were asking of them accusing you - then it seems reasonable to believe that more than I have gathered the same opinion. Therefore - being accused? Well dude - if the shoe fits - wear it. Again - it was YOU who posted the stupid shit. NOT US.

You could be anyone. You could be involved, so what if I have an
interest in the World Trade Centre? Find your own interests instead of
trying to stop me having one for whatever reason. I'm not saying planes
didn't hit the towers, I'm saying it was a cover for their controlled
demolition.Those towers were packed to the hilt with explosives all the
way down, 73 professors agree. Firefighters heard the explosions,
everyone one heard the explosions, you can hear them going off on every
level as the tower was blown to dust on every floor as it came down.
Why else would concrete and everything else be blown to dust

911 REVISITED It's all in this video:
http://video.google.com/videoplay?docid=1951610169657809939&q=911

---
--

That "is" the whole point. The WTC was NOT a typical steel frame
building. Most Hi Rises make use of huge steel girders at there center and
encase these girders in tons of rebar and and more tons of concrete to form
massive support columns. Then floors are laid, attached to these massive
columns. The only way to bring "them" down is to take out the support
columns. The WTC bldgs. were of a totally different design. They built
those bldgs. using a technique where the exterior walls "were" built as the
supporting structure. The bldgs. had no massive center columns to fall back
on. Once you take out a huge section (by a large airplane) you remove
the support from everything above it. And then its just a matter of time
before things start falling. Its really too bad the bldgs were built that way.
If they had been conventional design, they would have had very bad
damage to a couple floors, but they wouldnt have fallen. And the death
toll would have been much, much less.

Jeff

Really, can you give us a cite for this? BTW when you cut and paste a video together just using the audio and video you want someone to see (switching shots frequently so no one gets the true context of the video) it isn't worth much. And now we come to Dr. David Ray Griffin.

David Ray Griffin grew up in a small town in Oregon, where he was an active participant in his Disciples of Christ church. After deciding to become a minister, Griffin entered Northwest Christian College, but became disenchanted with the conservative-fundamentalist theology that was taught there. While getting his master's degree in counseling from the University of Oregon, Griffin attended a lecture series delivered by Paul Tillich at the Graduate Theological Union in Berkeley, California. At this time, Griffin made his decision to focus on philosophical theology. He eventually attended the Claremont Graduate University, where Griffin received his Ph.D. in 1970.

Yes after Dr. Griffin explained physics and structural engineering to us I now know that Bush did it!

This is great --- except that it is all a lie.

Kevin Ryan
From Wikipedia, the free encyclopedia
Kevin Ryan is a former Site Manager for Environmental Health Laboratories in
South Bend, Indiana, a subsidiary of Underwriters Labs(UL) responsible for
water testing. He was fired after publicly challenging UL's conclusions
regarding the collapse of the WTC.

[edit]
Research
Ryan said that in the WTC towers case, UL was the company that certified the steel used in construction of the two towers. Although Ryan was not was not involved in the certification for the steel used in the World Trade Centers, he claimed to have been given information, both verbally and in writing, about UL's involvement in in these activities.

However the company's spokesman Paul M. Baker stated "UL does not certify structural steel, such as the beams, columns and trusses used in World Trade Center". In a paper entitled "Propping Up the War on Terror: Lies About the WTC by NIST and Underwriters Laboratories", Ryan states that this statement by UL is misleading.

The NIST also said that steel is not certified and "UL did not certify any steel as suggested. In fact, in U.S. practice, steel is not certified at all; rather structural assemblies are tested for their fire resistance rating in accordance with a standard procedure such as ASTM E 119 (see NCSTAR 1-6B). That the steel was "certified ... to 2000 degrees Fahrenheit for six hours" is simply not true." [1]

But Ryan never stated that the steel was certified for six hours.

The NIST also states that steel heated to 2000 degrees Fahrenheit "softens and its strength reduces to roughly 10 percent of its room temperature value."[2]

Ryan has responded to the UL statements, noting that they directly contradict statements made by UL's CEO, Loring Knoblauch [3].

Ryan wrote to Dr. Frank Gayle urging him to clarify his findings on the causes of structure collapse of the towers, copying the letter to David Ray Griffin, author of The New Pearl Harbor, and to Catherine Austin Fitts, who is a member of the 911Truth.org board. Gayle was, at the time, the Deputy Chief of the Metallurgy Division, Material Science and Engineering Laboratory, at the National Institute of Standards and Technology (NIST). Gayle headed the "NIST and the World Trade Center" project.

In Ryan's letter, he claimed that a subsequent report from NIST ignored Gayle's initial findings that weak steel was not the contributing factor in the collapse of the towers. Ryan stated: "Your comments suggest that the steel was probably exposed to temperatures of only about 500 °F (250 °C)."

Ryan admitted that he wrote to Dr. Gayle on his own capacity and not on behalf of his employer, UL. Subsequently, UL disavowed Ryan's expertise because he was not employed in the Fire Protection Department and fired him.

Did you ever see the pictures of the WWII bomber that hit the Empire State Building? It was bad but, just as you said, the building didn't fall and the damage was repaired without too much trouble.

Hey wait, maybe that was an "inside job" too!

I'm always amazed, and quite frankly downright frightened, when I realize that there are actually people out here who have gone though a lifetime of learning to achieve the qualifications necessary required to teach at a post grad level, who are so absolutely stupid; so moronic and juvenile in their approach to simple logic, that they not only accept lunacy like this, but willingly feel the need to propagate this totally worthless and intellectually vacant line of reasoning.(or lack of reasoning in this case)

A two year old child can see that the logic for such an elaborate conspiracy is fatally flawed.
It is absolutely amazing to me that those espousing these elaborate conspiracy theories don't have the simple common sense to realize that no plan this big, or involving the many people that would be required to make it work could ever be pulled off in secrecy.
The simple numbers just aren't there.
Meanwhile back at the ranch.....we can all be prepared to fork up even more college tuition money next year to feed these idiot professors, and our kids will have the supreme privilege of working their butts off to get high scores on their SAT's so that we can send them off for four years of indoctrination into a world of over educated no common sense morons who don't have the collective brains to fill a condom.
On second thought, maybe its US who are the idiots for doing this!!! :-)))

Each tower had 40 huge steel columns running up the centre. If the booms you can hear during the collapse were the floors hitting each other and not demolition charges why were these steel columns not left standing but found at the debris pile in uniform 30 foot lengths? Why weren't those columns standing after the floors had suposedly slid down around them?

Some "contractors" in Australia watched a TV program about imploding buildings with explosives. They decided they could do it. Their city had a large building complex that had to come down. They bid on the contract and were the low bidder.

Just like the people commenting here, they packed the building with high explosives, a ton or more. Citizens came out to watch, many were in boats on the nearby lake.

When the explosives went off, the buildings did not all fall down, but large pieces did fly a 1/4 to half mile into the lake and several people were killed. This proves that the professional contractors who bring buildings down without breaking the windows on the building next door don't use very much explosive power, just a small charge in a critical place.

And idiots can make silly mistakes, like hiring a contractor who trained by watching Max eXtreme videos on TV.

I think we should all remember that the hard part of building an atomic bomb was done in three years, between 1942 and 1945. Soon, the Muslim terrorists will have a few bombs, particularly if the party of appeasement wins the Congress in November. Then the next attack on an American city can kill not just 3,000, but 300,000. I'm sure that some kooks will present the idea that the CIA did it so we could start another war for oil.

> 911 REVISITED It's all in this video:

Sonny, you have NO expertiese in Energetic Materials Science, Demolition
of MultiStory Buildings or even Structural Engineering, and NONE of your
"So Called Professors" do either. If you had any of the above
expertiese, it would be OBVIOUS, to you that these guys are "So full
of Shit, there eyes are BROWN". Tell us all when, and how the buildings
were filled with explosives, and who did it? Then tell us all, How it
was that these explosives could be set off, with the MILES of Detcord
it would take to time such a demolition, that would take MONTHS to
install, and fill, every hallway and crawlspace, and NONE of the
buildings occupants who were there, 24/7, never noticed ANY of that
Detcord strung all over the place, or these mythical Badguys installing
it all? Then explain to us all just how the demolition was triggered,
and timed correctly, when noone could possibley know where the planes
were going to hit, and what part of the REQUIRED Detcord would be
destroyed by the plane strikes, in each building? Then when you have all
that figured out, tell us all, what happened to all the Explosive
Residue that should have been left on the Structual Steel when the
mythical Energetic Materials Detonated? All the Steel was sampled and
tested for Residue, and NO TRACE of ANY Energetic Material WAS FOUND.
Dr. Johns "Says" he found traces of SULFUR, for which he has NO
Cooroberating Lab Results. BIG DEAL, Sulfur is NOT part of ANY of the
KNOW Energetic Materials that would be used in a Demolition of this kind.
It is also not a component of Thermite, in the classic formula, or in its
Industrial forms. Also Thermite is NOT used in Building Demolitions
because it takes way to long to Cut the Steel. What is use is Shaped
HE charges with Copper or Brass Cutting Wedges, to finish cuts that
were made with OXY/ACT Torches when the building was Prepped for
demolition. NO ONE saw anyone makinf stategic CUTS in the WTC prior

to 9/11 and the building were occupied 24/7.

Your theories are so far out, as to be unrational, in the extreme....

PLEASE DO NOT INSINUATE THAT I WAS TRYING TO DO SOMETHING ILLEGAL!!! I
am not seeking to do this illegally!!! I have a login and password,
however I can't find the link (stated to be on radioshack.com).

I am (essentially) looking for Radio Shack's equivallent of an SSL VPN
(my previous company uses Aventail). With all the layoffs that have
happened, I have not been able to get this information (that as an
employee I have the rights to have) from my new boss (and her boss was
one of the people let go).

I, and other Radio-Shack owned Sprint kiosk managers in my region, are
not always provided all corporate documentation from our regional
managers. She has stated there is a link on the bottom of
radioshack.com, however we have not been able to find it anywhere on
the site. This is all that I am looking for...

PLEASE DO NOT INSINUATE THAT I WAS TRYING TO DO SOMETHING ILLEGAL!!! I
was hoping another Radio Shack employee could have pointed me in the
right direction of the URL or link...

Code is dead - along with anything else that requires skill, practice, or
a little bit of effort.

The folks who want to do away with code should at least learn it and
try it - they might find it to be (gasp) enjoyable. Personally, I could
support doing away with no-code licensing altogether. I realize it won't
happen, but I gotta think that if I managed to learn Morse code, then so
can "they". The only thing no-code licensing accomplished in this neck of
the woods was to move the CB mentality from 11 to 2 meters.

I'm sure that drivers licenses applicants can
learn to use buggy whips on their horseless
carriages, but should they be required to?

learn to use a buggy whip to good effect on and horseless carage
Idon't think so I felt like taking a whip to mine the last time it ran
out of gas nothing would happened Buggy whip are abolslutely useless
wth horseless carrages expect I supose to get better service at the
gas station

Only if the buggy whip conveys useful information to the "horseless carrage"
as it did in the case of the horse.

As CW still conveys information as it did in the beginnings of radio the
anology does not hold water...

nope it does not convey information as it did in the begining of radio

in the begining it conveyed data other radio radio services as well as
the ars today it does not

We could probably modify vehicles to respond to
lashes from a buggy whip and eliminate the
accelerator.

No, but it darned sure wouldn't hurt to make sure they could drive
something with a standard transmission. Never know when the ol'
grind-o-crunch automatic is gonna give out and ya has to use
something more reliable.

I took the code test (novice 5WPM) back in 73 in high school, and had the totally worthless (to me) Novice ticket for 2 years or whatever it was. I spent a lot of time practicing CW, back then and also about 10 years ago, and can't seem to get past 7-8WPM, so I gave up on it, the sound of it annoys me anyway. It wasn't worth the stress it caused me to work HF. of course, since I DID pass the 5WPM test, I can be a general now. But, the interest has passed. I have a 2M mobile and an HT, but if I buy an HF rig, it's going to be to listen, but not to other hams, that's as boring as it gets. If I want to hear about hip replacements, and stuff like that, I can visit the folks at the assisted living place my mom's in.

I don't care about HF anymore, the code requirement outlasted my interest in HF. I wanted to be on HF from the time I was a little kid to about age 40 or so. No longer. I have my other hobbies now, guns, PCs, home theater, and dogs. Not much time or budget left for ham radio.

Just because you and I were forced to learn it does it mean a new ham should. It's an obsolete mode in most respects, handy in a certain type of emergency, but of little other use, except communicating with other

people using it. Nobody's stopping them. Nobody should have to learn it either.

But it's funny, the people I hear, both on HF and 2M and 440 causing all the real problems are people who didn't get a no code license, supposedly don't have a "CB mentality", yet do many of the things you can hear on 11 meters all the time, keying up on top of other hams, harassing hams, ignoring calls, etc, based on their call sign timeframe (Thinking if the ham was ticketed after xx-xx-1990 or whatever, they are a "hamster", etc). Seems like the code makes you this way, or maybe getting old does.

I would gladly take the "CB mentality" over the stuff the so-called "good hams" pull.

BDK

Not really...

He does have administrator access to PHPBB itself, but the popups are either in the html or part of the template, which he cannot edit (no ftp access)

The pop-ups are just a way for the host to make money, the users cannot remove them....

Anyway, anybody with a bit of common sense would just install a pop-up blocker and leave it at that..

Im using google pop-up blocker and I didn't even see any until you mentioned it...

Planes flew into the buildings and the top floors fell in mass on the floor
below it.
That floor collapesed and the mas fell on the floor below it.

I once watched a friend of mine break a stack of roofing tiles that was over
six feet tall with his bare hand. While he did it in one continuos motion,
he still broke only one brick at a time.

KE = 1/2 MV^2 says that once that top mass fell more than a single floor,
the building was going to come down, one floor at a time.

As for any inane ideas about wiring the floors with explosives one question
must be asked.
Why bother with planes and only two buildings when you could wire hundreds
and set them off when discovered or on a weekly basis?

Motorola type II is an analog system. While some channels may be
digital, the system isn't, and there are definitely some analog
channels in there.

Boca Raton fire is digital and 8 channels of Palm Beach County Sheriff
are digital, but the rest are probably analog.

Ken, if you hear any talkgroups that aren't shown in the list with an
A for the mode (or those services that aren't listed with modes
because no one posted modes to the site), please post the talkgroups
that are analog, so that the moderators can add the information to the
database.

The person running a phpBB can edit anything in the entire BB he wants
- I know, I run one - and I've edited it extensively.

>The pop-ups are just a way for the host to make money, the users cannot

Bull cookies. There's nothing in phpBB that can't be edited.

Would you have 1000 people learn to drive a standard
transmission even though only one person out of those
1000 people benefits from it? The cost/benefit ratio
is extremely high.

(I'll go ya one better - make EVERYBODY drive a standard - or a Harley -
and save some oil. Outlaw automatics!)

Ok then - same goes for satellite communications, fast/slow scan
television, packet, EME, and so on. Lots of applicants will never
use those modes, but the questions are on the test, so you
better learn the material.

K2FRD (I think) proposed what I thought was the best solution to
the Morse code issue - keep it as part of the test, but don't
keep it as a show-stopper. I think it would be fair, at least for
the higher grade licenses, to throw it in there with all the other
modes you may never use.... have it on the test, let the applicant
earn some points from it if they can, but don't send 'em home
disappointed if they don't.

Someone skilled in driving a vehicle with a manual transmission and actually using it can reap a number of performance benefits. These include improved gas mileage, better passing performance, better performance in hilly terrain, etc. If people were required to learn how to drive vehicles with manual transmissions, more of them might actually choose to drive such vehicles.

I would agree with this on premise. Its a fair statement and presented in a
manner that indicates a reaction to this event not unlike that felt by many.
The circumstances of the incident are horrific and difficult to deal with
for ANY "man in the street".
Its one thing to have questions. Its another to accept blindly as fact, some
"theory" put out here that defies all logic, by individuals with an obvious
political agenda.
The ultimate blame for 9-11 will no doubt be in question for eternity. The
actual circumstances that brought down the buildings however is obvious to
anyone without an agenda and possessing normal powers of observation and
needs no further comment really.
This having been said, it is obvious as well that those believing the
conspiracies are most likely not going to change their opinion since the
core logic for that opinion is based on
logic outside the realm of normal reason.

I accept nothing regarding this matter as fact. IMHO there is a collection
of ignorance and wishful thinking on both sides of the issue. IMHO, there
are many who are attempting to use the events or to bend the truth to
justify beliefs and conclusions that were held long before it happened.
There is also no doubt that there is intentional opportunism, obfuscation,
concealment, public thought manipulation and downright lying, from both
sides of the debate. I do think it is good that the untruths are being
questioned. I do think it was a crime that the investigation was
manipulated and the forensic and other evidence was hidden and destroyed.

Just my .02

Absolutely not. It doesn't matter if they want to ride
a bicycle or not. Simply knowing how to ride a bicycle
would be good for them. And if they discovered they
liked it enough to actually ride a bicycle, it would
not only benefit them but also benefit the environment.

Cecil, bicycles (and most motorcycles) need smooth
roadways; it is hard to operate "CW" while mobile and
off-road on a bike.

Now HORSEBACK mobile is the same on-road or off-road. No
gasoline or oil needed nor "gear shifting." Horses can
make "new models" all by themselves, keep themselves
"powered up" without the aid of stations like Exxon, 76,
Shell, or Sinclair. The US Army even had a 'horse
mobile' radio set (1943) to talk while the troop was on the
move. :-)

Everybody ought to learn to "sit" a horse and guide it. :-)

Dee seems to have little experience in long-haul driving,
or even short-haul automotive transport. I learned to
drive in a '39 Ford sedan. The first three autos I owned
were manual trans, a Plymouth two-door (came out west in
it), a '53 Austin-Healey roadster (manual trans went
kaput while downshifting on a freeway off-ramp back in
'60), and a Brit very compact station wagon. A whole
lotta NONSENSE to do the clutch-gearshift thing on all
those manual transmission vehicles even if it was easy
for me. NO "performance increase" whatsoever of manual
versus automatic.

Buying a new 2005 Chevy Malibu MAXX with its better
engine system computer allowed us to get 32.7 MPG
(based on both fuel tank filling receipts AND the
Driver Information Center display of MPG) for a 1,900

mile round trip up to Washington state and back in July this year. That's without using the Cruise Control (which my wife likes but I don't, driving over 90% of the time). About 2 1/2 MPG better than the Chevy Cavalier wagon for the same distance the year before. MAXX had done almost as good MPG in September last year on a much longer distance to Wisconsin, again doing about 2 1/2 MPG better than the Cavalier over the same route the year before that.

The engine computers keep getting better and better, some even compensating for the bad habits of some drivers using the almost-universal automatic. Why anyone would prefer using a manual or automatic in stop-and-go city traffic can be summed up as RATIONALIZATION or braggadoccio by manual trans owners. Besides, operating "CW" in stop-and-go city traffic will seriously cut down one's morsemanship speed with a manual trans. Unless one has a third hand... :-)

Cell phone coverage is growing, growing, growing. My wife used the cell for all kinds of calls while we were moving in MAXX through several states, even checking her e-mail on AOL! Without any skill at morsemanship whatsoever, she "worked" her sister in WA state from the parking lot of a restaurant in Amana, IA, using the cell phone. :-)

Hmmmm. One out of three Americans has a cell phone now. Yet, Blowcode contends "everyone has to learn" morsemanship to have a backup skill in comms? :-)

You are absolutely right! Why didn't I think of that? One caveat,
however - they'll also have to pass a Morse code test with their
bicycle horn. (I forget now - is this so they can drive a car or
use the microwave oven?) This is too silly.

Even if spelled correctly [you're, not your] Fred is definitely NOT
saying his thing with civility. :-)

Freddie, Mark was saying that - IN THE BEGINNING - ALL radio
services used morse code...and the first US radio regulating
agency wanted all to show competency in this common mode
so that the agency to communicate with all users. That era has
long since passed into oblivion. Just ain't no other radio services
using manual morse code for communications now.

Not all of those statements are always true. As fond as I am of manual transmissions, sometimes automatics have the advantage. A hydraulic torque converter with a manually controlled "automatic" transmission is better at drag racing than a manual gearbox under many conditions.

This is less true under road race conditions where the lower torque needed to be handled by the transmission allows the newer style "manual" transmissions to change gears in milliseconds. The secret is 2 transmissions, one for the odd gears, one for the even, and 2 clutches, you are literally in 2 gears at the same time for a short period of time. Takes a lot of computer control. That's one way to do it, there are others.

The landscape is very blurred nowadays concerning what is a manual and what is an automatic transmission, with "manuals" in modern race cars being more automatic than "automatics" in non-race cars.

And the state of CW vs digital is about the same. Except CW can always be beat if your PC works. You just need to select the correct mode.

That last statement is a fallacy. The digital modes are wiped out by conditions that will still permit CW to be used. Even SSB can sometimes be used when conditions wipe out the digital. I have repeatedly said and now I am emphasizing: EVERY MODE HAS ITS UNIQUE ADVANTAGES AND UNIQUE DISADVANTAGES. It seems that people wish to deny that whatever mode they don't want to deal with has any advantages whatsoever. They also wish to attribute magic properties to whatever is their favorite mode. Both points of view are foolish.

Name them. I've not found any one mode that can handle all conditions of distortion. However, I have found from time to time that distortion can be severe enough at times to wipe out all digital modes even if you try to switch from mode to mode. Occasionally it can wipe out CW.

I repeat: EVERY MODE HAS ITS ADVANTAGES AND DISADVANTAGES. To deny that is foolish.

Everyone keeps ignoring that I maintain that: EVERY MODE HAS ITS ADVANTAGES AND DISADVANTAGES. I keep repeating this but no one cares to acknowledge such a plain and simple fact. Why is that? Are you all so set on bashing what you don't like? Are you all so set on trying to prove that your favorite mode, whatever it may be, is the best?

Unless Pactor II has recently been put into the public domain, it requires buying proprietary hardware to run it instead of using a simple inexpensive sound card interface with commonly available software. Most hams are not thrilled with the idea of proprietary hardware and data modes.

Each tower had 40 huge steel columns running up the centre. If the booms you can hear during the collapse were the floors hitting each other and not demolition charges why were these steel columns not left standing but found at the debris pile in uniform 30 foot lengths? Why weren't those columns standing after the floors had suposedly 'slid down' around them?

Here's one of the columns:
http://img225.imageshack.us/img225/2403/meltedcolumnfy6.jpg

p.s. take rec.aviation out of your replies - they're only interested in the plane part.

I didn't mean to imply that there is a single mode that will handle all
types of distortion, just that there are specific modes available that
handle each type. And somethimes absolutely no digital mode or CW can
get through, but that circumstance happens less often as time goes on,
the exception being CW's cacpbilities aren't changing.

Your shouted statement is correct.

Hi Dave,

I've seen you refer to service vs hobby a number of times in this thread. As a noob here, could you explain
this? What do you mean by 'service'? Getting on, talking to others...communicating with others seems more of
a hobby to me.

Can you explain the service aspects of ham radio that you are referring to....can you define for me 'service'
and why amateur radio is a service to you rather than a hobby?

Thanks in advance,

noonespecial

All throughout Title 47 Code of Federal Regulations, the word
"service" is used as the type and kind of radio being regulated.
It is a regulatory term in that context. One can write the FCC
and get that information.

All too often, amateurs who think too much of themselves try to
use "service" as equivalent to some (undefined) "national service"
such as being a part of the military or a government position. :-)

Part 95 describes Citizens Band Radio SERVICE and the Radio
Control Radio SERVICE. :-)

Forgive the top posting

I was requested to define "Amateur Service" ... what service?

"47 CFR 97.3 Definitions:

(a) Definitions of terms used in Part 97 are:

(1) Amateur operator ... redacted
(2) Amateur radio Services ... redacted
(3) Amateur Satellite Service ... redacted
(4) Amateur Service. A radio communication for the purpose of self training, intercommunication and technical investigations carries out by amateurs, that is, duly authorized persons interested in the radio technique solely with a personal aim and without pecuniary interest."

Definitions [a][5] through [a][46] and section [b] in it's entirety have been excluded.

There are three elements of the amateur service: 1) 'self training' in any and all aspects of electro-magnetic radio telecommunication [notice this is listed first]; 2) 'intercommunication' includes talking, satellite techniques, television techniques [yes, amateurs can design and operate wideband tv], microwave techniques, digital techniques, spread spectrum techniques, CW, AM, SSB, FM, etc.; 3) 'technical investigations' include propagation studies at HF, VHF, UHF and microwave, EME activities, antenna developments, new modulation modes [particularly in digital communications], error correction techniques in digital communication, bandwidth compression techniques, and any number of Physics and Electronic areas of investigation.

Amateur [non financially compensated] radio is much more than buying a box and using it to just talk with someone. IMO, it is a service wherein the amateur, a duly authorized person, is committed to self training [education] in some components of the electromagnetic radio communication arts and sciences.

"Duly Authorized" requires authorization by competent authority after a demonstration of some related skill or knowledge by the person seeking to be 'duly authorized'. If a demonstrable skill level is NOT required then "Duly Authorized' does not make sense.

If you just want to talk, the 11 meter band or the FRS will meet your needs.

/s/ DD [AKA Dave]

That's a picture of something but please give us the pictures and
information on
a "debris pile in uniform 30 foot lengths"

As for the "huge steel columns"
"The unique structure of the WTC towers exaggerated the problems caused by
the weakened steel. The towers had a lightweight "perimeter tube" design
consisting of 244 exterior columns of 36 cm square steel box section on 100
cm centers, with 95% of the structure's interior consisting of nothing but
air Within this perimeter tube design there was a 27m by 40m core,
designed to provide additional support to the tower."

I don't consider 36 cm (less than 15 inches) huge in that context.

You're welcome, My pleasure.

There's nothing like the sound of a good loud fart or belch on CB
channel 19 to get the conversations going especially when they're
broadcast over-modulated with echo and punctuated with a roger beep.

That would make you virtually unique on the Citizen's Band.

One of the reasons for the desirability of the classic 148GTL
Sideband was the ability to crank up the output power and modulation
depth by simply opening up a couple of pots.

Though this was not the official position of Cobra, I remember
sitting in the service department when one of the techs told caller
after caller how to make this adjustment.

Many that left the building for the personal use of staff had also
been so adjusted.

Then again, the chief engineer had a Galaxy (complete with roger beep
and reverb) with about 100 watts connected to a yagi on the roof at
Cortland St, so liberties with the regs were not uncommon at Cobra.

Later models have been revised so such power adjustments were not
simple to make.

The above band operation is new to me. Although I did work with
someone, some years ago, who had modified an old Midland to work above
the band, fiercely arguing her right to do so.

There was a crackdown in St Louis that year, and it was sternly
explained unto her that she had been misinformed.

I learned sufficient code to gain my upgrade to General in 2005 and passed the written test the same evening. I have no interest in using code further. I may change my mind on that later, but given my advanced years, the point may be moot. My primary interest as a Ham is in fiddling with antennas, only one of the 11 antennas scattered about my 7 acres was purchased. There are 5 at my detached shop/shack and 6 more back at the house to use when I desire air conditioning while pursuing my hobby. Three of these are indoor dipoles for use when bad weather threatens, as it often does here in southern Oklahoma. I hope all you other gentlemen continue to enjoy the access to the Amateur Bands allowed by what ever license class you possess.

Why not? Picking what you want to use isn't okay? You don't want
alternatives to CW. Or alternatives to digital? Or , for that matter,
alternatives to voice modes.

So for you choice is bad?

Different brands of cars are not dissimilar enough to compare to different types of modes so the analogy doesn't work. The different brands of cars (Chevy, Ford, Chrysler, etc) are more like comparing a Bencher paddle to an MFJ paddle to a Kent paddle, etc. If you use CW, you pick your own type of paddle. If you drive, you pick your own type of car.

It works perfectly. A 4WD could save your life when
it would be lost in a 2WD. So why shouldn't the
government mandate ownership of 4WD's only?

Hi....Im new to ham Radio and have an all-band discone on my roof that I use for my scanner. I also will use this antenna to transmit with my ham radio. So far, it works OK for the transmissions.
Lead in line is 50ft of LMR-400 with 'N' connectors. My question is, Can I split the line for 2 locations? I like to listen to my scanner in my back yard and transmit with the Radio but I also would like to have a line indoors when the weather isnt great. Can I add a splitter and run a new line indoors ?
Or, should I have a dedicated line to run inside? Thank You for any responses....Mike

Maaybe it never occured to this Dufus, that these columns were built in
30Ft lengths and bolted together, or welded, as the building was
erected. Since these columns were all designed to be in "Compression",
when the lateral failure of the Exterior Tube happened, they would
naturally come out of compression, and break at their 30 Ft original
lengths. Duhh, this is first Year Structural Engineer stuff, but I guess
it would be beyound, the comprehension of the above, GED Dufus.......

It doesn't matter to them - all they want to do is ignore the obvious and try to stir up shit. What they fail to see is when they ignore the facts - it makes them look like the assholes they are.

Personally, I hate seeing all this 9/11 stuff being restirred. Not because of disrespect - but because it makes me want to go out and destroy all those rag heads for causing the deaths of so many innocent people. IMHO - we're treating them with kid gloves, even those who now reside in this country "supposedly" legally. I don't trust a one of them. WAR IS WAR. They didn't give a shit about who they hurt or killed - why the hell should "I" care if they all die? I DON'T. Their so called religion is about peace..... ROFLMAO..... PEACE MY ASS..... Its their way or no way. FUCK THEM ALL - AND ANYONE who wants to side with them even if making conspiracy twists to try to say those ragheads had nothing to do with it.

It's Not a Code, no code problem, it's a generational problem!

In the past week, the articles that seemed to get the most play on ham sites were the Southern Border Volunteers and the lack of brotherhood in ham radio.

I was amazed at the responses that were both negative and critical of supporting a group that wanted to protect our borders. I suspect some passengers were probably tsk tsking the only guy in four airplanes with the guts to do something to stop the rag heads on 9/11. How else can you explain rag heads armed ONLY with box cutters were able to control three airplanes? Many of the younger generation find it easier to criticize than take action.

Ham radio went to hell when Dick Bash got involved with his published "cheat sheets".

This piece is from the prospective of a ham with over 50 years spewing RF throughout the world. At 68 years of age, I look back at my start in ham radio, appearing before a steely eyed FCC examiner in Norfolk Virginia. I missed the distance for a Conditional license by about 11 miles. I had to walk between school and home in the snow, uphill both ways.

Do I think that everyone should have to do what I did to become a ham? Nope, I can live with the memorized exams, the no code, etc. Like the parable of the workers in the vineyard, I accept the rules have changed. At no place in the parable does it tell the late arriving workers to ridicule those that worked all day.

Just as sure as these words are on your screen, you too will someday be an old fart just like me. As you enter the dotage of your life, health concerns and the condition of your aged friends, becomes more of a concern. We, like you, used to talk about more contemporary subjects. Unlike a number of you, we allowed the older folks to have their conversations without ridicule. It is called respect, and is a two way street. Realize that when I was a newby, I suffered the same as you at the hands of the old farts. They believed that for you to enter their group, you should first show respect and learn to snatch the pebble from their hand.

None of you started in your working life as the CEO of the company, yet many of today's generation feel that a newly minted license conveys total knowledge. What you have is a license to learn, take advantage of it and the brotherhood will naturally follow.

If we all took the time to show each other respect, and be less quick to judge, not only would ham radio be better, but our lives as well.

Still doesn't work since the FCC doesn't mandate use of CW.

The hijackers on Flight 93 were stopped by more than one guy. And the
people on the other planes did not know the hijackers were on a suicide
mission.

> How else can you explain
> rag heads armed ONLY with box cutters were able to control three airplanes?

Simple:

- The hijackers killed one or two people who tried to resist.
- Then they said they had a bomb aboard.
- They also said that if the passengers did as they were told, nobody
else would get hurt.

You have to remember that before that terrible morning 5 years ago,
suicide-hijacking was unknown. Hijackers took over planes to get
ransom, or to get transportation somewhere, or for political reasons.
They always had demands and always promised that if their demands were
met, nobody would get hurt or killed. And the conventional way of
dealing with them was to do what they wanted, get the plane on the
ground safely, negotiate, and then go after them on the ground.

All that changed on Sept 11, 2001. Look what happened when that
shoe-bomb guy tried it.

The folks on Flight 93 had two things the people on the other flights
did not:

1) They *knew* the rules had changed - they knew what the hijackers
were going to do.

2) They had time to formulate a plan and time to implement it.

> Many of the younger generation find it easier to criticize than take action.

Just like their predecessors.
>
> Ham radio went to hell when Dick Bash got involved with his published "cheat
> sheets".

Well, I don't know if it "went to hell" but I agree 100% that Bash's
"cheat sheets" were a very bad thing for amateur radio.

Remember, though, that it was the top folks at FCC who decided not to
prosecute Bash. Lower-level FCC officials had evidence against him, and
wanted to go after him with criminal charges - but the leadership said
no. Those FCC folks who decided to let Bash get away with his "cheat
sheets" almost 30 years ago were not young people then.

If it's 2 meter or higher in frequency, no splitter. When there is bad
weather disconnect one cable, and connect the indoor antenna (cable and
connector).

Sorry dude, MY line of thinking - DIDN"T INVITE THOSE COCK SUCKERS HERE TO KILL. "I" had nothing against them until they pulled this shit off. AND for that - I will NEVER forgive them. They all deserve to die. Even their brand of religion is "flawed".

I guess you're one of those who would open the gates to allow them all to move in and the Mexicans too - huh?

Dude - I DO think - every fucking day about those 3000 + killed.

L.

From: "Fred Hambrecht" on Tues, Sep 12 2006 4:55 pm

>It's Not a Code, no code problem, it's a generational problem!

Why are you younger generation kids so retrograde compared
to my, OLDER generation, Freddie? :-)

Is your generation's generator turning over? Not much
coherent stuff being generated there...

>In the past week, the articles that seemed to get the most play on ham sites
>were the Southern Border Volunteers and the lack of brotherhood in ham
>radio.

Oh, wow! South Carolina is in danger of being over-run
by Mexicans?!? Losing the "brotherhood?" Have you tried
recruiting a "sisterhood?" :-)

Freddie, I live in southern California. California borders
Mexico. Guess what, that border is only around 3 hours
drive from me. :-)

>Ham radio went to hell when Dick Bash got involved with his published "cheat
>sheets".

Really?!? I thought it "went" when you hams were allowed
to use VOICE! :-)

Or maybe when SPARK was outlawed?

>This piece is from the prospective of a ham with over 50 years spewing RF
>throughout the world. At 68 years of age, I look back at my start in ham
>radio, appearing before a steely eyed FCC examiner in Norfolk Virginia. I
>missed the distance for a Conditional license by about 11 miles. I had to
>walk between school and home in the snow, uphill both ways.

You forgot BAREFOOT, Freddie. :-)

So, you "spewed RF throughout the world" over 50 years ago?

Unidirectional? I started in February 1953, HF beam patterns
pointed in many, specific directions...thanks to the United
States Army Signal Corps. :-)

>Just as sure as these words are on your screen, you too will someday be an
>old fart just like me.

Poor baby, born in 1939. Tsk, tsk, tsk. That makes me 6 or 7
years OLDER than you, Freddie.

>As you enter the dotage of your life, health concerns
>and the condition of your aged friends, becomes more of a concern. We, like
>you, used to talk about more contemporary subjects.

since you didn't format this for proper quoting and replies]

>Unlike a number of you,
>we allowed the older folks to have their conversations without ridicule. It
>is called respect, and is a two way street.

Freddie, you are demanding ONE WAY driving on a two-way street.
When did you last take a driving test? :-)

> Realize that when I was a newby,
>I suffered the same as you at the hands of the old farts.

Poor baby. Snif, snif.

>They believed that
>for you to enter their group, you should first show respect and learn to
>snatch the pebble from their hand.

You mean DRINK in their hand, don't you? :-)

WHY did "your elders" have PEBBLES in their hand?

>None of you started in your working life as the CEO of the company, yet many
>of today's generation feel that a newly minted license conveys total
>knowledge. What you have is a license to learn, take advantage of it and the
>brotherhood will naturally follow.

Sigh...Freddie, you may be too far gone in your dotage? :-)

NOT in THIS group in this Din of Inequity, Freddie. Ain't
NO "respect" unless one is a devout morseman worshipping
at the Church of St. Hiram.

>If we all took the time to show each other respect, and be less quick to
>judge, not only would ham radio be better, but our lives as well.

Whoopee, a MAXIM! You ARE in the congregation of the Church
of St. Hiram!

I am supposed to "respect" you for your 'age?' :-)

So, does your quaint little pebble-filled maxim work the
OTHER way, Freddie?

When are YOU going to show respect for those OLDER than
YOU? :-)

[watch out, I have lots of 'pebbles'...:-)]

And the women and children who have died every day from bombs, bullets and
starvation since the first gulf war had nothing to do with 9/11.
In fact there probably were no people from Iraq on the planes and *you* buy
some of your gas from the country with the most people represented Saudi,
Arabia.

I doubt you know enought about your religion to call Islam flawed.

>

"I had nothing against them" is similar to BillCosby's "I have nothing
against them" in his classic monolog on bigotry.
I suppose you feel that way against the German's, Japanese, British, Native
American's and others who have killed far more Americans than were killed in
9/11.
>
> Dude - I DO think - every fucking day about those 3000 + killed.

I had been inside all those buildings many times myself as a broadcast
engineer. I do know that the top floors of both of the tall towers had
lots of very heavy items such as massive TV transmitter plants, both
analog and new digital ones, new digital antennas for tv where being
added on the roof and also the motor structures for the upper elevators
where on the top floors.

That is why they call it "war", and that is unfortunately how you win wars.
Every "real" leader i.e. Patton, have known this for a long time. There is no
such thing as a "surgical" war. I dont care how careful you are. Those ragheads
have been terrorizing, and blowing people up for a long, long time. Its time to
end it, no matter what it takes. If we dont, your grandkids will be praying to
Allah someday. Phrase from the Koran: " By the sword ye shall convert"
And these bastards are seeing to it. Kill them ALL now, no matter what it
takes (Period). But unfortunately we dont even need to have the ragheads
ruin us,, the bleeding hearts in this country are already doing it for them.

Gosh, where have I heard that before. I remember, it was when we were
trying to stop the domionos by fighting in Viet Nam.

Phrases from the bible,
Matthew 10:34
Think not that I am come to send peace on earth: I came not to send peace,
but a sword.

Luke 12:51
Suppose ye that I am come to give peace on earth? I tell you, Nay; but
rather division: For from henceforth there shall be five in one house
divided, three against two, and two against three. The father shall be
divided against the son, and the son against the father; the mother against
the daughter, and the daughter against the mother; the mother in law against
her daughter in law, and the daughter in law against her mother in law.

Luke 22:36
He that hath no sword, let him sell his garment, and buy one.

YOU do not know me. I don't know YOU either - so do NOT suppose you can tell me how I can think or feel. I do NOT have anything against ANY people. It is not "me" who is declaring the wars - but since they found it in their liking to come here and kill - then they shall be killed. And I'm not suggesting the women or children - but the murderous pricks who did it or want to perpetuate it. WHO are YOU to offer an excuse? They'd slit your throat in a heart beat. They don't give a fuck about you either. OR is it you're one of them?

Yes, their religion IS flawed. They want to die to receive 70 virgins and so on? What the hell's with that? They don't even use the women here - they keep them covered up. And as for "Virgins" - don't those dumb bastards know that once used - they're no longer virgins? On the other hand - who's suggesting they're virgin "women". They suck each other off enough - could be men, goats, donkeys, camels, etc.

There is NOTHING you're going to tell me to want to forgive that yellow bellied low life prick and all his cock sucking buddies. Again, much as I don't like Bush, at least he goes out in public - not hiding in caves. OBL is a Yellow Bellied ASS HOLE. Were it not for his money - he'd be just another piece of shit.

Forget the Bible versuses dude - they do me no good. Christ isn't here - nor is God - to stop this craziness - nor will they be. They've been coming to earth for "centuries" - they've not arrived yet. Furthermore - it is said that Christ himself will rise against the anti Christ - so that makes him too - a "warrior". So don't portray me as evil when the Prince of Peace is to do the same thing. Peace - that is such a joke. There hasn't been peace on this earth since Cain and Abel - and never will be! Yeah, it would be nice if one day soon - someone could say - "OK - all people - put down your weapons - there is peace on earth from today on" and it "happens". NEVER .... that is such wishful thinking. Any smart religious person knows we'll not see Peace any time soon. As many churches as there are, bibles, korans, etc - supposedly teaching Peace and Love - for all these centuries - did ya ever take notice - it isn't happening? It just doesn't work that way. I don't care how many cops, preachers, priests, nuns, etc - you have - there will be NO peace. The shit is worse now than ever. Some may say the end of the world - so be it. But when each of us die, it's always the "end of the world" that dying person's world - so who's to say it is "THE" end of "EARTH"? Where "all" mankind dies at once or there abouts. Where ALL things cease to exist - including troubles? The only way this world will end is when our resources run out, the sun goes black, we nuke each other to death so the clouds do suffocate the earth from all living conditions.

See, this is where YOU TOO are flawed - They want US to practice THEIR religion - or else. THEY HATE CHRISTIANS, JEWS and I can't recall the last one. SO - they've included ALL but themselves. How convenient. And they're "peaceful"? PEACEFUL - MY ASS. Christians are also out there pounding the pavement to shove religion down people's throats. So, it could be deemed yet another "religious" war. You bible carriers always switch to a bible when

things don't go your way. Those versuses from days gone by aren't going to save your ass should they come knocking.

>> And the women and children who have died every day from bombs, bullets
>> and
>> starvation since the first gulf war had nothing to do with 9/11.
>> In fact there probably were no people from Iraq on the planes and *you*
>> buy some of your gas from the country with the most people represented
>> Saudi, Arabia.
>>

The "Gulf war" as you said, had absolutely nothing to do with 9/11. I'll agree with you there. That was a whole different story. However - HAD they allowed the General in charge to finish the job, THIS Iraq war may not be happening.

>> I doubt you know enought about your religion to call Islam flawed.

I never pretended, admitted to or claimed to be a "religious" finatic or "follower" if you will. Not of "Christianity", Buddhism (sp?), any others and CERTAINLY not "Islam". But - I DO know what I've seen and heard with my own ears and eyes. Those pricks want all who do NOT follow Islam - to die. They are NOT practicing a "peaceful" religion as much as they'd love to think. So, if you think Islam is so great - why don't YOU go to Afghanistan and join OBL and take what comes to you. You "seem" to support it in defending it.

>> I suppose you feel that way against the German's, Japanese, British,
>> Native American's and others who have killed far more Americans than were
>> killed in 9/11.

Eh - I think your history is a bit fucked up. It is the people who came to America - who KILLED the "Native" Americans. WE essentially took their land off them and in the end - they have like maybe a millionth of what they once owned. I'm not proud of that - but THAT is history!

As to the other wars - were it not for a nut case like Hitler - just as Saddam and the Japanese leader whose name I've forgotten - those wars may never have been fought. Never did "I" say I agreed with them. BUT since they were started - those fruit cakes had to be stopped. THEY alone are responsible for the loss of innocent lives. ANYONE who "starts" a war - wears the blood. Now, as for THIS Iraq war - I have in past posts and shall in this one - DETEST it. I didn't agree with it then nor do I now. BUT - I DO AND WILL support our troops. They're doing what they are sent to do -

even if "they" don't agree with it. OBL and that dick head from N. Korea are the two latest nuts that need dealt with. NOT so much the people - but the assholes that are convincing them. What I DID agree to - is going to Afghanistan to find OBL and deliver his cold dead sorry ass on a silver stretcher. BUT Bush lost track of that and went wondering on to Iraq. We should have devoted ALL resources to finish that first job. Had we done that - OBL and his dick sucking buds might all be dead now - and with no leader with "money" - maybe the other "rag heads" would stop their fateful dreaming.

>>>
>>> Dude - I DO think - every fucking day about those 3000 + killed.
>>
>> And they think about the tens of thousands who hve died at the hand of
>> American arms.
>>

They died because others were attacked first and we stuck our nose in to defend those being attacked - in whatever manner. REMEMBER - we even helped Iraq at one time - against Iran. Strange - how we now battle in Iraq AND in the U.N. at least for now - with their foe as well - Iran. THAT is our problem - we ALWAYS stick our nose in. Those assholes in that area have been fighting for CENTURIES. WHO the hell are WE to think WE will stop it in a couple years? It ain't never going to happen. PEACE in the middle east is a wild dream at best.

At one point WE even armed the Taliban..... We essentially fought Russian equipped armies via the Taliban. We get bit in the ass every damned time we help ANYONE. We need to let them fight it out - kill each other off if it makes them happy. THEN mop up when they start looking in our direction. IF they want to commit genocide in that area - far be it from me to stop them OR care. There's nothing we're going to do to stop it with absolute certainty. I'm not totally heartless - I DO feel for the kids and women. IF they could be removed, I'd say do it and let those assholes have at it.

Furthermore - EVERY country - who has capabilities to make arms - SELLS them. SO, be it the U.S., Russia, N. Korea, whoever..... it is not necessarily the "maker" of those bombs who is "responsible" for the innocent lives being taken. Just because YOU buy a gun from Smith and Wesson - doesn't make THEM guilty for your committing murder. THAT analogy you used is a bit off based..... IF Israel bombs the shit out of Palestine, it's not OUR fault they used stuff they bought from us! WE didn't "pull" the trigger. Does it make it right? NO - but that is a fact of life.

There is none! That is the problem. He quotes them pretty easily - probably reading word for word - but himself doesn't know the significance. He blasts ME for blasting "Islam" - hahahahaha ROFLMAO.
The Bible itself - from that which I do know and had preached to me - has ALWAYS alluded to war in many areas. So - that "history" book is telling us that THOSE people have been at it forever and WE are not going to stop it. You would "think" that over all those centuries, someone - one of their many leaders - would have said enough is enough. Even if they "get" one - the poor bastard is assassinated - further proving peace is not desired. They don't want "us" interfering. So, let them go on - we can watch via CNN - ring side seats.

Maybe the "true" Islam is peaceful - but "I" speak of the <perhaps twisted version of> "Islam" being preached by these murderous PRICKS. Where NO ONE but them - should exist. IF that isn't a bunch of psychos, I don't know what is.

Infidels are we? OK..... I've stated my title for them before and will do so again - Cock sucking yellow bellied rag head bastards. They hate those who don't follow the Koran or at least their "twisted" version of it? OK - how's this - shove the Koran up your ass. Go ahead and hate me - who gives a shit? IF I cared, I sure in hell wouldn't be defaming those ass holes. You never see them with women, and they look like they've never bathed in like their life time. So, yeah, I think I have them pegged pretty close.

Regardless what is happening today - they "still" show - that they prefer "civilian" targets over "military" targets. Buses, market places, weddings, etc. SO - it is easy to see they are truly YELLOW. Have I "offended" anyone yet? If you're "innocent" - then this doesn't pertain to you. If you're among the supporters of those murderous pricks - then may you be next to get what they have coming.

The Christian bible is far bloodier than the Koran and a reference was made
to a single similar verse in the Koran.

What's a "cirut?" You are so stupid, Markie, anybody can see why you
can't pass the General theory exam.
I can bet you didn't pass the no code tech until about after 20 times
of trying to pass it.

> made to a single similar verse in the Koran.
>

You know - I had a very strange experience today. I had a bunch of donkey shit - quotes from the "Koran" -sent to me by someone "supposedly" writing from the "Whitehouse". I wrote to the "Contact" address of the White House to let them know that "IF" it DID come from that "employee" that they need checked into and I DETEST having "religious" views shoved down my throat. I've not heard back - yet. The address "of course" - looked legit. It closely matched the one I got from the web FOR the Whitehouse. I "doubt" that was a legit address to start with - but if it was - then that writer had NO right to cast her views on me. ALSO - she had NO right to use an "official" address as it be (if it were so) - to do so. It is not for the Government to push religion.

I don't give a shit if they reply or not. My main concern is "maybe" a virus being started as there "appeared" to be some links which I didn't click on. I wanted them to know that "just in case". The whole thing stunk.

Oh and as for the "Koran" being less violent than the Bible - Ah..... then WHY is OBL and his "fairy" band of cock sucking followers vowing that ALL Christians, Jews, etc. SHOULD DIE if not following ISLAM who "uses" the "KORAN"? STUFF THE KORAN UP YOUR ASS.

L.

4565. simple dipole for newbie - copper, alum, or galv steel pipe?

Newsgroup: rec.radio.scanner
Date: 2006-09-14 20:41:53 UTC
From: Paul Monaghan <monaghan@shorelinelegal.com>
Message-ID: <qeejg2lo0a9vl70bjuve1btaru97i3aodq@4ax.com>
Source record: 6095

Hi folks, new here.

I have been in need of a weather radio, but when shopping for one this week it seemed such a waste to receive only 7 frequencies when I could be receiving thousands. So I ended up with a scanner, just like that.

Wow! Instant hobby! Big mistake! I'm a serial compulsive, so now it's time to start making antennas...

The scanner is one of those closeout RS Pro-2052s. With the stock antenna I can receive the local police at around 39 and some frequencies in the 100s, around 125 and 150, including civilian air. Maybe more, but I'll concentrate on these for now.

Would like to build a simple half-wave dipole to start with. In my garage I have a roll of 10ga solid copper, some solid aluminum wire maybe twice as thick (don't know what it is, is left over from a satellite TV system), and some galvanized 1-inch steel pipe.

Antenna would be mounted inside a detached garage so weather/weight are not significant factors.

Reading the archives I can't tell whether to go with the copper because it is a better conductor than the others, with the aluminum because it is thicker than the copper, or with the galv pipe because it is much thicker than the copper though somewhat lossy.

Any thoughts appreciated.

Thank you,
Paul

was of them all
if its inside make a dipole out of coax.

however.
i'd use the ally meself, you wont get a better sig with copper it would be
wasted and weather badly
CSA does not really play much of a role in RX only aerials

mike

I'll agree with you 100%. I have a Tech license and enjoy the hobby very much. I plan on upgrading to General once the code issue is settled. I have always heard that "If you don't use it, you lose it". I have no interest in the code so why should I not be allowed to enjoy Ham radio. BTW, my CB license years back was KLW4194..

I wish someone would please explain why WTC 7 came crashing down at 6 p.m. when nothing even hit that building? What did owner Larry Silverstein mean by, "pull it" just before it collapsed?

Do your own research instead of believing everything the controlled news media and our worthless elected officials tell us. Type "WTC 7" into a search engine and get educated on the subject instead of chastising others.

Make a Half - wave vertical with pipe. If the wall is dry wood, you can simply clamp it in place on the wall. You figure out the length of this antenna by the following formula

468 / freq (in MHZ)

Hook the center conductor of the coax to the antenna, and then simply run a wire from the shield braid of the coax to a nearby ground. Presto. You now have a half - wave vertical.

A l;ittle note on dipoles. the bands you want to listen to are primarily vertical in nature. so if you made a diplole, you would want to mount the thing vertically, not horizontally. The side of the diplole with the center conductor connection would go at the top.

the sides of this antenna can be figured out by the following formula

234 / freq (in MHZ)

this gives you one side of the dipole. shield to one side, center conductor to the other. I would use the copper wire for this.

Another antenna is the loop. the entire length of this antenna is figured out by the following

1005 / freq (in MHZ)

this is a loop of wire, and is usually tacked onto the wall. the hookup is made at the side of the loop for vertical polarization. Once again, the copper wire is best suited for this antenna. the only trouble with this antenna is that it is slightly directional, recieving best at a 90 degree angle to the plane of the loop in both directions. The loop is usually formed into a circle or a square on the wall. (square is the usual case).

all of the answers in these equations give the answer in feet and fractions of a foot. simply multiply the fractional part by 12 to get inches. rounding to the nearest inch is fine.

naturally, this mounting info is based on an indoor environment, outside mountings need to be dealt with a bit differently. also, we are assumiong that the building does not have metal siding, which will tend to block radio waves. These do make excellent attic mounted antennas in the house, by the way. Just mount the antenna on the end wall of the attic, straight up. If you feel you must insulate the antenna, then electric fence insulators are a quick and easy way to do this. simply tap the nails into a convenient stud to mount the antenna. The half wave vertical can also be made from the copper wire, by the way, and it will work well. The half wave does not require radials , by the way. That is why we simply run a ground wire from

the braid to ground on this antenna.

for the coax connection points, a piece of thick plexiglass makes a good terminal block. just drill a couple holes in the block, close together, and put an extra washer and nut on the screws. walla ! you have a place to hook the wires up. Screw spacing ? 1/2 inch or so works pretty well....

The end impedance of a half wave antenna is in the neighborhood of
1000-->5000 Ohms depending on the diameter of the conductor; fatter
conductors, lower Z.

Connecting a coaxial cable to the bottom end of a half wave element and the
shield to ground will then result in a V.S.W.R. of roughly 2500/50 or
500:1. You need to convert the feed Z to 5o Ohms either by:

1. A quarter wave stub as in the popular J antenna
2. A lumped element L or Pi network

The END impedance is not where you are making your connection. The impedance
at the connection point on a half wave vertical is about 30 to 35 ohms. Not
a perfect match , but certainly not 500 to 1 !.

They didnt "convert" it when i ran a half wave whip on my car , and the
shield was grounded to the chassis. I ran this for 15 years and never had an
swr of over 1.5. My 40 meter vertical outside doesnt have an swr of 500,
either, and it has worked well over the last 20 years. No stub matching is
required in either case. Better tell this to the thousands of hams that have
been running these antennas for the last 50 years ! No antenna matcher is
needed, either (your lumped L or pi network). The formulas and the antenna
itself came right out of the arrl handbook.

So, you're telling me you have a 66' tall 40M vertical that is fed directly
with coax?
I would appreciate a model of the antenna in EZNEC or ELNEC or AO. In
addition, the reference and year of the Handbook or any professional journal
where it describes end feeding a half wave antenna directly with coaxial
cable.

Just what makes a person an "asset to the ham radio service"? That
sounds just as stupid as an "asset to the telephone service". Like it
or not, ham radio is just a means of communication that has world-wide
reach. Listen up, the "ham radio service" isn't some illustrious
organization. It's just a means for people around to world to chat
live. It can have great value in some emergencies, but most of it's
use is idle chatter.

Yes, I do have a 66 foot vertical, that is suspended from about an 80 foot tree out here, and i have been using it for a very long time. And the mobil antenna is still on the old truck, also. Out here in the country, they dont care what you put up for antennas. I also have a horizontal loop antenna out there that is 150 feet on each side.

If you are so convinced that it doesnt work, then try it out. Its just that simple. Put a three foot one up in the attic, as i described, and see if it "fails to work".on the 155 mhz police band. Out here, we dont use EZNEC. We just put 'em up, tune 'em, and use 'em. The antennas I dexcribed here are well known to any novice operator (back when you had to know something about it). The half - wave vertical is problably one of the oldest antennas on the ham bands. It's not some "new idea" that i dreamed up.....

It's a mechanical decision, mostly. The antenna has to be 1/2
wavelength long (and vertical) for best reception, so consider that
when you decide what to use.

My personal decision would be a ground plane, not a dipole. Radials
(the horizontal elements) about 75" each (for the 39 MHz signals) and
a few vertical elements - one 75" long, one about 26" long for the
aircraft band and another about 19" long for the 150-160 MHz range.
(You can add as many as you like - the only constraint is mechanical -
how do you do it?)

Same reason all of Christendom wanted to kill all non-Christians in the Holy Lands back in the Crusades?

Same reason Catholics killed Protestants and Protestants killed Catholics in the Hundred Years' War?

Same Reason Christians tried to eliminate all non-Christians in Armenia in the early part of the last century?

On the whole there's a larger percentage of bloodthirsty-against-not-us Christians than there is in any other religion.

BTW, the only part of Islam that follows the tenets that OBL does, as far as killing all infidels, is the Wahabi sect, which is as much a part of mainstream Islam as Santoria is part of mainstream Christianity. When's the last time they killed a goat on the altar at St. Pat's?

"Make a half wave vertical and simply run a wire to the nearest ground
and presto", you have a very high impedance antenna that will not match
to 50 ohms and is very bad advice. Make it a quarter wavelength vertical
radiator and ground the coax to something substantial, that would be
better advice. On the half wave dipole, it doesnï¿½t matter if the element
connected to the center of the coax points up or down, the antenna
doesnï¿½t know any different and it works the same.

Ladies and gentlemen, here is a perfect example of CB mentality that has plagued the radio hobby from the beginning. Someone here obviously doesnï¿½t understand the fundamental nature of antennas but preaches bogus information as it was gospel. Maybe the half wavelength mobile antenna with the perfect match he refers to is his fiberglass loaded CB antenna, which is advertised in half, full, one and a half, and every combination of silly lengths to please CBrs as the dealers take their money. They do match ok, but are not the full length, end fed, very high impedance half wave antenna that he originally described in this thread. If you actually read the ARRL handbook you will see Mr. Wolfiï¿½s grievous mistakes.

Aah! A voice of reason. I well remember the CB ads re 1/2 wave and full wave
antennas. As far as I could tell, the only thing half wave was maybe the
overall length of wire if it were unwound and stretched out straight.

"I" haven't mentioned - that Christianity was or wasn't a cause of wars - I called the bible a "history" book. It DOES speak of wars. Hell, even when Christ supposedly was taken, there was upheaval. MY point wasn't with all that crap - mine was "strictly" dealing with the "Koran" which Mike seems to be pushing and my disgust with it and the cock sucker currently using it for his excuse to murder. The one "responsible" for bringing the towers down.

The one responsible for the towers will most likely be judged by
history to be a Christian.

Mike is pushing nothing. Mike is pointing out that you have a sound bite
education and that you know nothing of mainstream Islam.
```

There are places called libraries and they have things called books. But they take more than 30 seconds to read.

The bible is a *very* poor history book. Even in cases where a story tells of towns that existed at some point in time as in the Exodus, they frequently did not exist within hundreds of years of each other.
As for the major people in the stories, if they existed they had neither the might or power that was described.

Iknow I am gonna regret this.. but who "will most likely be judged by
history" to be responsible for the towers..

mike, i would use an antenna switcher, use both radios on one antenna,
you don't want rf going to the scanner from the ham rig anyways, bad
weather? as said before, switch to a n indoor antenna and be safe

While that is true in your country, it is not yet true here. The
international conference simply left it up to each individual country as to
whether or not to require it.

For those in the Durham Region, Ontario, Canada area, I have updated the frequency lists. I have also re-designed the site a bit. I hope it looks more "communicationish" then it did before.

I should have the county frequeny lists for areas east and north of Durham Region done later today.

I can't answer the "last" question with certainty but I am willing to bet in some eyes, it will be "Bush". And in saying that, "I" am "NOT" blaming him. It just seems like the President of the day always takes the heat.

As to the remark of the one bringing them down - deemed a "Christian"? THAT IS FUNNY..... though you may be right! History will bear it out one way or another.

Further - I heard this AM, the Pope apologized to the MOOSELEMS - apparently for talking crap on them (deservedly so - in my book). They didn't deserve an apology. Also, the news was that they killed a nun and others. So they've proven themselves once again. They can't pick on someone prepared to kick their ass. THEY'RE YELLOW BELLIED PUSSIES. The same shit I've been saying - they're a bunch of murdering cock suckers who wants all to bow down to them.

I heard that somewhere in the Koran - that it is written that all "infidels" will convert to ISLAM "or" die by the sword. And that is a "peaceful religion"? MY ASS.....
I STILL say - they can KISS MY ASS. Stick the Koran/Quaran or however you spell - it up your ass. It is no more peace preaching than the Bible. With all the Priests, preachers, ministers, nuns, etc. - if there was to be peace, there would be with all the preaching going on. Same with the rest - NO ONE CARES. Then this band of merry cocksucking murderers comes along and says we must convert..... THAT IS HILARIOUS. DREAM ON - DICK HEADS

I'll be an infidel as long as they're sucking each others cocks - including their donkeys, camels, and other animals cocks as well. THAT is what I think of them. I'm not afraid, they can only kill me once. Ya got to go sometime!

"10 Meter Amateur Radio Band Coverage (26-30MHz)"

Prima Facie Illegal. They can't be sold IN the United States, or TO
the united States.

Next time you want to talk about the law, read it first - you'll look
less foolish and less crooked.

In American English, "gas" is short for gasoline. Gasoline is the same as
petrol. The term petrol is generally not used here.

Sez you, you smarmy, liar. One of the posts I sent to the FCC was from the guy who makes the units, claiming they were for CB.

By the way, This "newbie" got his first ham license in 1952, and his first Commercial License in 1955.

Yes, it hinders.

It keeps out the stupid and lazy. Individuals that really don't what to be
hams if it requires knowledge and skill to get a license.

Make them stay on CB and FRS. They're not an asset to the service.

And neither are you.

Besides playing the same Crap over and over constantly, Todd doesn't even change the order of the shitty songs much. What a terrible disk jockey.

He could at least have a little variety in the order he plays the shit.

Again, He cant remove the ads... I also run many PhpBB and PhpBB2
boards, and I know that from within phpbb admin, you can set up the
forum, change the permissions, change catagories, mod and admin access
but there is nowhere where you can edit the HTML on which the forum is
displayed..

The Ads are part of the phpBB styles, which you have the "upload" by
ftp and then "install" in phpbb admin in order to change....

He cannot do this as it is a FREE FORUM HOST... the only access he has
is phpbb admin.. NOTHING ELSE>..

Your wrong, just admit it and go on with ur life...

NOTE: If he was hosting his own forum using phpbb and mysql databases
then YES he could change anything he wanted, he could upload any new
styles, or edit the templates himself, but as he doesnt have access to
the webspace itself, then he only has limited access to what he can do

BULLSHIT! Code is NOT KNOWLEDGE!!! I have NO problem learning
technical info that helps me use the radio properly. Code is not
needed to do that.

Get off your high-horse already.

>Make them stay on CB and FRS. They're not an asset to the service.

CB and FRS don't have the range.

>And neither are you.

Who the FUCK are YOU to make such a statement? You snot nosed,
arrogant PRICK! You do NOT know the kind of person that I am!! Wake up
and smell the cappuccino! Code is obsolete! Knowing code does NOTHING
to make somebody an "asset to the service". And, could you explain
what makes a person an "asset to the service"?

What fantasy do you hold that you would believe that your tiny-fisted
tantrums would have more weight than that of a leprous desert rat,
spinning rabidly in a circle, waiting for the bite of the snake?

>

Waxing poetic now?

Yes it's obsolete. Yes, it's fun.

Should it be used to qualify? Let the FCC decide (soon).

If it is eliminated, will that change the "Service"? Maybe.

Will CW disappear? Probably not.
Historically, it defined ham radio, so it has a special place in the
hearts of very many hams. It's natural that they sort of cling to it.

Will CW's elimination be the end of ham radio? Of course not.
Ham radio will cease when all the hams die off. New hams are needed,
with or without code.

My personal hope is that a significant minority of these new hams will
take up CW and learn to enjoy this mode. It truly is a fun mode. I
hope people will WANT to learn it.

Compulsory things are seldom welcome,,,some are necessary. Is CW a good
requirement for ham radio? I guess it has probably outlived its day.

A requirement related to other digital modes would make a good
replacement. True?

The above transcript is an URBAN LEGEND.

It 100% WILL NOT work as stated.

The full story of this particular amusing Urban Legend is at the URL
below...

http://www.snopes.com/autos/techno/keyless.asp

Wireless Entry devices for passenger cars and trucks use RF.
They do not use audio. Also, the RF signal from a keychain Auto
Remote Entry device WILL NOT carry atop a cellular telephone
transmitted signal.

If this method were true and did work as
stated, hackers would sit in parking lots
with scanners and computers getting the
embedded signals off of people's keychains
and the result is vehicle Grand Thefts would
increase 5000% and nobody would want to
own any type of a wireless entry system on their
car or truck.

I am amazed that Bell stated this, as with his background
in ham radio and broadcast electronics, he should have
known this was a crock of chicken beaks....

Could anyone recommend a reasonably priced scanner that can pick up APCO PC25 digital transmissions? My hometown's PD & FD recently switched over to that mode - so with my "old" scanner, I have NO idea what's going on in town anymore! Reason for wanting a cheapie is that EVERY OTHER department in the area is analog and I can monitor them just fine with my Bearcat 9000XLT (which I love!). So, basically looking for a 2-channel P25 unit - heh. Thanks in advance.

John B.

What's your idea of "cheap"? Also you need to make sure they can still be
monitored. Just because they went digital does not mean you can pick them up
with a Digital scanner. Unless you can find another person in your area it's
hard to know for sure. perhaps the best way would be to go to a local radio
shack and see if they have a digital scanner to demo. then see if you can
pick up the local PD.

Think Back, Are todays conversations on 2 meters as technical as they were 25 years ago, or today might you hear things like:

"I woke up this morning with a pimple on my butt" or

"The dog crapped on the living room carpet again."

Allowing no-codes on VHF & UHF has made discussions less technical and more like CB. Don't let your hatred of CW destroy our HF bands too.

Amateur Radio, a National resource.

It's written tests and CW that keep the sick, lame, and lazy, out of your receiver, not a plonk button or kill-filter. Don't degrade receiver performance. Support keeping CW, and increasing the speed requirement, and make the passing score for writtens 85%.

TNX, 73 de Slow Code :-)

Unfortunately the RS stores in Ontario are now called "The Source by
Circuit City" Electronic toy crap that can be bought at fleamarkets
BUTTTT they are still the only store around that sells resistors, caps,
solder, alligator clips, and other wierd stuff Wally mart doesn't.

Man, are we screwed.

I agree in principle; we can work out the details later. What we
obtain too cheaply we do not value highly. Keep the standards high.
Put some teeth back in ham tests. That tends to weed out those who
aren't serious. While not a panacea it would go a long way toward
cleaning up a lot of the dreck we now deal with on a daily basis.

4652. A humble request for "SlowCode" and contemporaries

Newsgroup: rec.radio.scanner
Date: 2006-09-20 01:49:08 UTC
From: Roy Lewallen <w7el@eznec.com>
Message-ID: <12h17gktf0opa87@corp.supernews.com>
Source record: 6032
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

As a reader and frequent contributor to the rec.radio.amateur.antenna newsgroup, I see a large and increasing volume of messages cross posted to a large handful of groups which have nothing to do with antennas. Not surprisingly, I don't see any of the regular contributors to this newsgroup participating in the endless arguments about Morse code, testing requirements, and what it takes to be a "real" amateur. These threads seem to be increasing in number daily, involving the same participants, and have grown to the point that the signal-to-noise ratio of rec.radio.amateur.antenna newsgroup is getting seriously degraded. It's becoming necessary to fish through multiple off-topic threads to find the postings involving antennas.

There's no point in including rec.radio.amateur.antenna in the list of newsgroups you send these postings to. There are certainly groups whose readers are much more interested in participating or reading about these topics.

So my request is: Please don't include rec.radio.amateur.antenna in the list of newsgroups you send the original posting to. And when replying to a thread whose topic doesn't involve antennas, simply delete rec.radio.amateur.antenna from the list of newsgroups receiving the reply, before clicking "Send". This won't detract in any way from your discussions, and will be a relief for rec.radio.amateur.antenna readers and participants.

Thanks and 73,
Roy Lewallen, W7EL

There's an internal battery in some phones to keep the memory alive if
you change batteries, but it wouldn't actually run the phone for more
than a small fraction of a second. It's about as powerful as the CMOS
battery in a computer.

>> 4) There is also a way to access your cell phone serial number from

Or just tell the company to disable the phone you have on your account
- they have all the information they need in their database. Although
you CAN get the IMEI of a cellphone very easily.

>ftp and then "install" in phpbb admin in order to change....

Or just learn enough PHP to rewrite the files, then upload them. It's not even as difficult as what I do every day for a living - PHP is a pretty simple language. Next you'll tell me that programs written in C++, or Jovial, or ATLAS can't be changed.

>He cannot do this as it is a FREE FORUM HOST... the only access he has
>is phpbb admin.. NOTHING ELSE>..

If he can't even upload the phpBB files, it's not even a host - he's being given access to someone else's BB. If he can upload the phpBB files, he can change them before he uploads them.

>NOTE: If he was hosting his own forum using phpbb and mysql databases
>then YES he could change anything he wanted, he could upload any new
>styles, or edit the templates himself, but as he doesnt have access to
>the webspace itself, then he only has limited access to what he can do

GoDaddy hosts my phpBB (that means that it runs on their computers - they have nothing to do with the PHP code I upload to the site) and I rewrite it any time I want to rewrite it, so don't tell someone who's done it that it can't be done. Learn what "hosting", "uploading" and "programming" mean.

Absolutely not. Back in the 70s we would discuss antennas, circuitry, the pros and cons of certain radios, cars, boats, guns, and such. Occasionally we would discuss more esoteric things like philosophy and history (conspiracy theories were always a favorite). We kept away from politics and religion, mostly, except we would discuss them in general terms.

Come to think of it, HF was the same. These days, it's hardly worth turning the radio on most of the time.

> Allowing no-codes on VHF & UHF has made discussions less technical and

That might be an oversimplification but it's generally accurate. Like I said earlier, what we obtain too cheaply we do not value highly.

> Amateur Radio, a National resource.

Too many of us forget that if we weren't a resource we would be legislated out of existence.

Sure!

I guess that you were not around during the heyday
of the 14.313 and 75 Meter Jamming Wars of
the late 70's and 80's.

ALL of the QRM'ers involved had a General or better
and in those days you had to pass a 13 WPM code test
to even GET ON the HF spectrum.

Your argument is as pointless as your ball-shaped fart head.

This is a prime example of why we don't have many intelligent
discussions on this board. Anyone who says anything halfway
interesting gets flamed by the resident gollums and trolls.

My request is: Please learn about kill files, and please learn how to take action yourself by killing all posts crossposted to groups other than rec.radio.amateur.antenna. You'll have a much greater chance of changing yourself than you will of getting everyone else to do your bidding, and you'll be a whole lot less frustrated once you do figure that simple task out.

I have a theory about hams who can't even master a news reader, but I'll leave that discussion for another thread.

Chris, we don't mind using the filters. The problem is they (you) are
changing the subject every single day so we are constantly making new
kill filters. THATS the problem.

And so I'm gathering in doing further research online. The P25 card to pop
into one of these high-end Unidens is almost $200 alone! There are a few
used P25-ready scanners on eBay going for around $200 --- that's probably my
best bet.

John B.

No, YOU are the problem. A proper kill filter will kill all crossposts,
no matter what the identity of the poster may be. If you really knew
how to use a kill filter (and you obviously don't), morphing posters
would present no problem at all.

You also top post, and that makes it obvious that you have a lot yet to
learn about Usenet.

Good point and great idea of going to Radio Shack in town. I'm sure others
have gone there looking for the same.

Hope you can find the info you want. If it turns out they have gone to a Non encrypted digital you can hear, I would get a Uniden if you want to listen. They will run around $500.00 for one that will pick up the Digital, but they have a nice one that fits in a shirt pocket.

You should make sure that you have a proper news reader and then configure it as has been outlined in the news.answers FAQs for the last 20 years or so. If Thunderbird won't cut the mustard, then you should drop it in in favor of one of the other three or four *free* newsreaders which can do the job.

Usenet users should take responsibility for their own environment and stop asking others to do it for them. Too many people have a cheesy newsreader (such as Google Groups) and are too lazy to find a good one. They are often the people who complain the most loudly about crossposts instead of doing something about it themselves.

(Hint: People using newsreaders which can filter on the Newsgroups header should develop a filter which uses that header. If an article is crossposted, there will be at least one comma in that header. To kill all crossposted articles, kill all articles with a comma in the Newsgroups header. You can also use the Xref header to do the same thing by searching for two or more colons.)

My old Radio Shack Pro-51 is getting a bit tired and I'm thinking it's about time to drag it to the back of the barn and
give it one in the neck.

Any suggestions as to replacement? I've been thinking of Yaesu VR-500, but, as it has been around for a lot of years, I
suspect there are several possibilities in the same approximate price range ($250-500) that are more advanced than that.

I *really* haven't followed the markets over the past years, so I'm kinda in the dark (lots of brands, yupiteru,
bearcat, uniden etc. etc.)...

My basic requirements:
- Aviation traffic monitoring (99.9% of the time)
- I would be nice to monitor/control the scanner via Linux over [serial] connection
- Must be portable.

I'm all ears...

Wow, thank you for all of the advice everyone. Apparently I have some more reading to do...

In the meantime I put together an off-center dipole 48" up 18" down using aluminum wire. I understand there are probably better options, but this provides significant improvement over what I had before.

Just one question about this antenna - how would one estimate the impedance? I don't have an impedance analyzer. I have read in this NG that the impedance will be roughly 300 Ohm, and that a TV-type balun would bring it down to 75, which would be better than 300 if not ideal. I have read elsewhere that it will be roughly 75 Ohm and no balun is necessary. What is the truth?

I do have a 4:1 balun that would work if impedance is around 300, but if impedance is around 75 would there be any benefit or harm in using it?

Thank you all again,
Paul

They run close to $500.00 new. If you see one on Ebay that is a buy it now
or is won for $200.00 I would be VERY surprised if it actually worked when
you got it. If you really want to take a chance, make damn sure you pay with
a Credit Card. At least then when you get it, if it does not work you will
get your money back. If the seller will not let you pay with a Credit card
don't even consider it.

It is "hosting" a phpbb for him, he isnt given ftp access so no
"uploads", he is only given admin access to the phpbb board...

> >NOTE: If he was hosting his own forum using phpbb and mysql databases

I understand these terms, and you have ftp access to the space that
GoDaddy allocate you... he doesnt, so all I can say is "learn to read"

The truth is that a scanner that covers a wide range of frequencies
rarely shows 50 ohms, and that's only over a very narrow frequency
range, so I wouldn't worry about it. Putting on a balun may improve
reception on some frequencies, only to degrade it on others.

Roy. I appreciate your point and I'm sorry for disturbing the
newsgroup. It won't happen again, I promise. I'm glad we have
RRAA because I had antenna questions they couldn't answer over
in rec.radio.cb

Does one long continuous wave(CW) make your antenna warm in the winter?

What kind of antenna do you use to receive CW, a vertical co-linear
ground-plane or some form of half-wave Dipole? What's Best?

Does antenna polarization matter if the CW is high speed and received
with a computer?

A lot of hams now are Appliance Operators and hate CW, how can they keep CW of their antennas?

I heard like if you hook the coax to your dipole antenna in reverse, CW comes out backwards, Like POTS would come out as STOP. Is that true?

Thanks Roy, keep up the good work! You're doing a good job. 73

"BH 340" begins work in support of Shuttle landing
``````````````````````````````````````````````````

It is Thurs, 2:43am EDT (0643z).
USN NP-3D #150522 "BH 340" of the Pt Mugu VX-30 "Bloodhounds" has
been at Patrick for several days waiting to assume his duties for the
Space Shuttle STS-115 landing. Moments ago he departed Patrick AFB and
is headed to an orbit at FL220. At the moment he is up with ATC on
132.45.
This acft is "Cast Glance" equipped. Cast Glance is a system of
stabilized high-power optics used in range surveillance and data
collecting.
I will be trying to snag his mission freq for this landing and will
pass it along as soon as I hear him.
The NASA weather plane has been up already; heard him on 126.65 with
Weather Com. He orbited around the Shuttle Landing Facility here, and
announced fine weather conditions for the landing.

The Shuttle landed on time, shortly after 6:20am EDT (1020z).
Comms were clear from the Shuttle on 259.7 during their approach and
landing here on Rnwy 33.
The KSC ground freqs are busy now with comms from the convoy of
vehicles approaching the shuttle on the runway, fire dept, security,
etc.
While listening to the comms from the Shuttle, I was watching the
landing televised by NASA TV. The view was through the pilot's HUD; it
was a spectacular landing.

Does anyone still "do" ham? There are cell phones, 15 mile range 2 ways,
satellite phones.....

Why would anyone want to take a test to communicate? with Star Trek
convention grade people??

Of course, if you're not "into" ham radio - you'd never know that - would you? Cell phones have their limits too. Just as FRS, and others. ALL modes have "limits". AND this is not to say I'm "pro" code. I learned it for my licenses, I listen to it and use it once in a while but not as much as some and a tad more than many. It isn't all about the "code". That hasn't kept the ass holes from invading the airwaves. Don't knock something you've never tried. There is more to it than "just" talking. But, like choosing a "Cell phone" for features - be it video, internet, etc. - aside from "just" talking - ham has many choices too. If you don't like one mode - you try another. Some buy cells "just" for emergencies, while others buy them for all the reasons and effects they can offer. IT IS A MATTER OF PERSONAL TASTE. Cells are the "current" fad just as Ham was to many of you who have never bothered to jump in. Some day Cells will be a thing of the past as well. Like Ham, Cell is NOT the answer to all of life's problems. I've seen THEM fail too when needed most.

Albertto,

I've been *very* happy with Pro-51. I don't have anything negative to say about it and I'd still want to continue with
it if I could.

The thing is that battery power doesn't work anymore ('DC9V In' still works), 'light' -key doesn't work anymore, 'K/L'

-key doesn't work anymore, #6 & #8 -keys works intermittently and the case is "slightly" cracked. :)

I don't want to make any hasty conclusions, but I suspect that dropping it three floors down the stairwell didn't do it
much good, neither do I think it is a good idea to try to sell it thru eBay :)

(Actually I was *totally* surprised and impressed to see it even a tiny bit alive after the fall!)

The thing is, I'm interested in something "new" I can live with for the next - say - 10-15 years.

Cheers and all that, take care!

Who knows. I would not recommend buying anything from them, just use it to see if you can actually hear what the PD is sending. It's real iffy asking around. Someone may "tell" you it's something you can pick up, but if you buy a Digital Scanner then find out they did not know what they were talking about, you are sitting there with an expensive scanner that will do you no good. We have a P-25 system here, but I have never been able to find out for sure if it can be monitored or not. I have found that the only way to know for sure is find a Digital scanner and try it. If a Pro-96 will pick it up, then you can thank them, go out and buy a Uniden.

4701. Here are the new band designations & modes after FCC R & O comes out.

Newsgroup: rec.radio.scanner
Date: 2006-09-21 23:32:00 UTC
From: Anne Tannah <anne@no.net.net>
Message-ID: <QhFQg.592$o71.428@newsread3.news.pas.earthlink.net>
Source record: 5981
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.swap

Here is a list of the band designations and allowable modes after the FCC Report and Order comes out eliminating the Code Requirement.

Note: This bandplan has been endorsed by the C.B.R.L., Citizen Band Relay League, 225 Main Street, Newington CT.

Band Frequency Allowable
Range(MHz) Emmissions

CB-160 1.8 - 2.0 Splatter Mode, Echo-mics o.k.
CB-80 3.5 - 4.0 Belching & Farting permitted on 3.950
CB-40 7.0 - 7.3 Splatter mode, 7.2 echo-mic calling freq.
CB-20 14.0 - 13.35 Jamming modes permitted on 14.313
CB-15 21.0 - 21.45 Noise Toys & Roger beeps ok below 21.250
CB-11 27.185 National New Ham calling frequency.
CB-10 28.0 - 29.7 Tweak your CB a bit more and you're there!
CB-02 144 - 148 Farting and repeater kerchunking.

Profanity, insults, and Cursing are permitted if phrases like "Old Extra licensee" or "Morse Code" are used in the same sentence.

Discussions of a technical nature are rarely heard and prohibited anyway.

27.185 MHz is also the prefered frequency for new hams to let out a mating call.

Ten Codes are prefered for brevity.

See ya on the new Bands!

Anne

Running more than 4 watts on 27 MHz in the US has been illegal since
CB became legal here - 1961 IIRC. I don't know what the rules are in
Oz.

When you spam over and over like this Marqueer, you know you won't get
tripped up trying to spell complicated words, don't you?

4706. Markie will be using a case of K-Y this weekend after his shemale wife and daddy get through!

Al, yes more or less the same rules in Oz - type approval etc, but this gear is not considered as a collectable boatanchor though, so a bit off topic in the boatanchors forum - maybe an excess of cross-posting.

4709. Techno Remix of Bizarre CB Transmission

Newsgroup: rec.radio.scanner
Date: 2006-09-22 16:28:24 UTC
From: Dan <danonqspam@pnotspamd.net>
Message-ID: <Xns98467EEF05BD6danonqspampnotspamd@204.186.200.105>
Source record: 5989
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

From the official Web site:

" They Call Me The Midnight Cowboy...
Late on the night of 9/20/06 (actually 9/21/06, 0528 UTC), Dan
Quintiliani, K3DRQ stumbled across a bizarre CB transmission while tuning
the dial on his IC-725 ham radio transceiver. The transmission went
something like this:

"They call me the Midnight Cowboy, the Midnight Cowboy,
They call me the Midnight, Midnight, Midnight, Midnight, Midnight..."

...over and over again.

So, Dan decided to record this transmission on his computer, and (soon
afterward) to make a techno remix of it."

John B. - have you checked www.radioreference.com to see what type of digital system is in use? As far as I know, you can monitor/decode/trunk track any digital and/or trunked system unless it is encrypted, OpenSky, Passport, or ProVoice. (I am sure there are exceptions to this "rule".)

Actually it was 1957 when they took the 11 meter band from the HAMS and
created the "Class-D" Citizens radio service....The callsigns
were 11W1234 series of calls.
If this guy wanted to market these amplifiers and not attract the wrong
attention all he would have to say is they are for amateur use only, with
broadband coverage from 28 to 30Mhz.HAM gear does NOT require ANY "type
acceptance" at all..
It's not real hard to figure that they would indeed work on 21/24 and
27Mhz....food for thought....

My fault for not noticing your ng. I guess *newer* amps wouldn't be
too collectable, although I do recall an article in QST (or was it CQ)
many years back about a pair of 4CW300s running in the trunk (boot) of
a car. That kind of amp would probably be considered pretty
collectable.

Home brew ham gear does NOT require ANY "type acceptance" at all..
Commercial ham gear must be type accepted.

Chris,

Normally I would agree that killfiles and delete buttons are certainly indicated in a case like this, but there is a certain amount of newsgroup etiquette that is warranted on your part, too. You can't just do whatever you want on a newsgroup with no accountability and expect everyone else to modify their behavior to accomodate yours. You even cite Usenet etiquette in your own post, so how about doing your share in applying said etiquette to yourself?

Regards,

Al

The RR site is sometimes great, but I have found for the system here it's of no help. The info is outdated and has not been brought up to date. I and at least one other person tried to help, but they were not interested so I gave up. It's a great site for info, but I would not recommend buying a $500.00 scanner just because it said it would work unless you could confirm it.

>
>A requirement related to other digital modes would make a good
>replacement. True?

I completely agree. If you want to filter out the less serious, then
use a relevant method. Here in Canada, in order to get a no-code
licence, you must get at least 80% on the technical. And technical
prowess will always be important regardless of the mode of
communication.

"Stuff happens."

BTW, this "Jawod" signed a message on rec.radio.amateur.homebrew
as "AB8O." I found a blank on that call sign at QRZ.

> >Yes it's obsolete. Yes, it's fun.
>
> I found it to be cold and impersonal.

I agree. Manual radiotelegraphy has NONE of the body language
or tone of voice or much of anything that is normal in everyday
person-to-person contacts. Using this monotonic form of
very early radio allows any user to be anything they want with
no real references to anything but the ability to send telegraphy.

Heh heh...if the test is eliminated the expressed outrage,
anguish, and horror will be a horrendous wail never to be
silenced until the last code key is pried from cold, dead
fingers! :-)

> >Will CW disappear? Probably not.
> >Historically, it defined ham radio, so it has a special place in the

>
> Let them cling, they are free to do so.

I'd say "clog" as in cholesterol clogging those "hearts."

"Jawod" uses "many" AS IF it were quantitative. Not so much
in the USA now. The US Technician class licensees now
number about 49% of all, twice as large a number as the
General class. I doubt they want to hear such facts.

> >Will CW's elimination be the end of ham radio? Of course not.

> >with or without code.
>
> I totally agree.

In the USA the number of newcomers is not able to keep pace
with the expirations of licensees. That trend has been evident
for more than a year. [see www.hamdata.com] The majority of
new licensees are Technician class. Novice class, the
supposed traditional "beginner" license has been expiring at a
steady rate for years before the US changes in 2000.

"Jawod" and other morsemen think that all will "like" what they
like. They really don't understand what other citizens want.

> >Compulsory things are seldom welcome,,,some are necessary. Is CW a good

That sounds fair. In general I've approved what Industry Canada
does on communications regulations...a bit more than what the
FCC does for US civil radio services.

TrunkPCR version 0.8.200 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

I've been testing this new version using a PCR-2500 that has been graciously loaned from Vincent Battle... P25 Card support is still undergoing and I need your feedback to fix any kinks. To activate P25 decoding, you will have to click the FSK Mode button. It will change to P25 instead.
All of your active Control Channels will need to changed to P25, other channels will need to be changed to FM...
Any old channels that were set to FSK will have to be changed to FM and "Stored", otherwise you will get strange results when listening...

This update fixes a few bugs and has a few changes:

May 04,2006 - Added: Channel Selector using a List Display - 1 Click Tune.
May 07,2006 - Fixed: Group/Radio ID Descriptions now updated on main window.
May 08,2006 - -----: Group/Radio ID Descriptions can now be Clicked ONCE to edit.
May 09,2006 - Fixed: Multiple Displays of Frequency in CC Activity, if LCN=0.
May 09,2006 - Added: List of System Pages in CC Activity.
May 09,2006 - Added: List of User Status Updates in CC Activity.
May 09,2006 - Added: Audio Spectrum Display.
May 10,2006 - Fixed: Control List display in CC activity when Afiliation Reset Clicked.
May 12,2006 - Added: 6 Watch Group Lists in CC Activity, Set in Trunk Settings.
May 12,2006 - Fixed: Logging Buttons in Dump Display if 'Dump.Log' NOT Opened.
May 12,2006 - Fixed: Logging Buttons in Misc Display if 'Misc.Log' NOT Opened.
May 13,2006 - Added: Time Stamps to Dump and Misc Log Files.
May 18,2006 - Added: KeepAlive Function. Default was ON in Previous Versions.
May 18,2006 - Added: Raise DTR Function. Default was ON in Previous Versions.
May 21,2006 - Fixed: Dual Receiver mode in Edacs.
May 21,2006 - -----: Edacs LCN 26 to 31 Report Messages. No longer used as active channels.
May 21,2006 - Fixed: Updating Stored Freqs when Channel Editor Saved.
May 22,2006 - -----: Increased Max Groups and Radios Again.
May 22,2006 - -----: Increased Max Banks and Channels for $50 donations.
May 23,2006 - Added: Direct Entry of Frequency after using any knobs or

menus.
May 30,2006 - Fixed: External Speaker Selection for PCR-100 when
pluged-in or out.
June 04,2006 - Fixed: COM Status Display when Spectrum Sweep
Enabled/Disabled.
June 08,2006 - Added: Decoding Wave Files for Moto/Edacs Trunking Systems.
June 15,2006 - Added: Block Data Calls in Edacs.
June 20,2006 - Fixed: I-Call Reporting in Edacs.
June 22,2006 - Added: ESK Selection in Edacs.
June 23,2006 - Fixed: Edacs Dotting was set to Zero when Trunk Settings
loaded.
June 24,2006 - Fixed: Scanning in Conventional Mode when ScanBank Count =
Zero.
June 29,2006 - Fixed: Menus Enabled/Disabled when Sweep Spectrum
Selected/Deselected.
June 29,2006 - Added: 7.5 khz Step Frequency...
July 14,2006 - Added: MPT-1327 Trunking Support. (Minimal at this time)
Aug 18,2006 - -----: PCR Type Setting now Automatic. Menu Removed...
Aug 18,2006 - Added: More Support for PCR-1500/2500...
Aug 24,2006 - Added: Searching Tone for CTCSS & DTCS Tone Squelch...
Aug 26,2006 - Fixed: Saving SoundCard Settings.
Aug 26,2006 - Added: Select SoundCard Settings From Trunk Settings.
Aug 28,2006 - Fixed: Saving Group Watch Settings.
Aug 28,2006 - Fixed: Adding a New GroupID from TrunkID Editor.
Aug 31,2006 - Fixed: Entering a Frequency above 2ghz from keypad.
Sept 05,2006 - Added: Locking Out a channel during Scanning now Resumes
Scanning.
Sept 13,2006 - Added: Follow Active Frequencies in BandScope.
(Double-Click sets Watch Level)
Sept 19,2006 - Added: Duplex Offset Frequency for each Scan Bank.
Sept 21,2006 - Added: Duplex +/- Offset Buttons control frequency look-up.
Version 0.8.200 Released 09/22/2006

A new option in the BandScope will allow you to follow the active freqs
according to the signal level. Double-click on either side bandscope when
there is black area or the center bar. A Red line will appear indicating
the watch level. This is turned on in the BandScope Menu...

MPT1327 Support is limited at this time... I'll need some input from users
who have this system in their area to complete this trunking scheme...

Regards,
Jay

There's no type acceptance for ham gear.

Slow Code you're an idiot, because only an idiot would contine to post this sort of crap over and over on multiple groups...

No code licensing has done nothing to hurt CW or other license classes, and certainly hasn't turned Ham radio into Children's Band, at least where I live (or have lived over the past 40 years or so)

I don't know where you live, but where I live, the conversations are at least as techincal on 2 meterss as they were before (even 25 years back), and maybe even more so. Given your agenda on polluting the newsgroups (and probably bands too, if you actually do get on the ham bands) with this crap that supposes than anyone that doesn't do 20+wpm code is not a ham, or other similar pretenses, I doubt if you actually are even active on the bands... (bigots rarely are, in my experience).

Yep, we talk about a lot of very technical topics, not the least of which occur on 2 meters, and on local nets, or offline on other frequencies during the day (and heave3n forbid, we actually use telephones too!, and with others outside of our area. The future of ham radio in the Hawaiian islands is likely to be relatively bright, even without an increase in CW. CW is not only the slowest method of communicating, it also is the oldest. Why don't you look into some of the relatively recent advances in the hobby, which most of us have at least evaluated and determined whether we wish to participate, rather than the continual baiting and other crap you post on the groups?

By the way, I can't recall seeing you post an actual call sign, just a "slow code" moniker, so how would any of us really know you are one of us anyway? Even if you are, your'e clearly one that should have been outed many years ago.

Despite the feeling I'm doing nothing more than feeding a troll, I feel it's time to see if you're actually real... IF SO, please reply to my email address (not on the groups, you've polluted them enough already) and we can hopefully entertain an intelligent conversation.

Thanks
